1	INTRODUCTION	1
1.1	The subject of order statistics . . . . .	1
1.2	The scope and limits of this book . . . . .	2
1.3	Notation . . . . .	3
2	BASIC DISTRIBUTION THEORY	7
2.1	Distribution of a single order statistic . . . . .	7
2.2	Joint distribution of two or more order statistics . . . . .	9
2.3	Distribution of the range and of other systematic statistics . . . . .	10
2.4	Order statistics for a discrete parent . . . . .	12
2.5	Distribution-free confidence intervals for quantiles . . . . .	13
2.6	Distribution-free tolerance intervals . . . . .	16
2.7	Independence results—order statistics as a Markov chain . . . . .	17
	<i>Exercises</i> . . . . .	19
3	EXPECTED VALUES AND MOMENTS	25
3.1	Basic formulae . . . . .	25
3.2	The normal case . . . . .	30
3.3	The discrete case . . . . .	34
3.4	Recurrence relations . . . . .	36
	<i>Exercises</i> . . . . .	39
4	BOUNDS AND APPROXIMATIONS FOR MOMENTS OF ORDER STATISTICS	45

4.1	Introduction . . . . .	45
4.2	Distribution-free bounds for the moments of order statistics and of the range . . . . .	46
4.3	Bounds and approximations by orthogonal inverse expansion	54
4.4	Bounds for the expected values of order statistics in terms of quantiles of the parent distribution . . . . .	57
4.5	Approximations to moments in terms of the inverse cdf and its derivatives . . . . .	65
	<i>Exercises</i> . . . . .	67
5	FURTHER DISTRIBUTION THEORY	70
5.1	Introduction . . . . .	70
5.2	Studentization . . . . .	71
5.3	Statistics expressible as maxima . . . . .	72
5.4	Random division of an interval . . . . .	79
5.5	Order statistics for dependent variates . . . . .	82
	<i>Exercises</i> . . . . .	86
6	ORDER STATISTICS IN ESTIMATION AND HYPOTHESIS TESTING	93
6.1	Introduction and basic results . . . . .	93
6.2	Least-squares estimation of location and scale parameters by order statistics . . . . .	102
6.3	Estimation of location and scale parameters for censored data	109
6.4	Life testing, with special emphasis on the exponential distribu- tion . . . . .	120
6.5	Robust estimation . . . . .	124
	<i>Exercises</i> . . . . .	130
7	SHORT-CUT PROCEDURES	137
7.1	Introduction . . . . .	137
7.2	Quick measures of location . . . . .	138
7.3	Range and mean range as measures of dispersion . . . . .	140
7.4	Other quick measures of dispersion . . . . .	146

7.5	Quick estimates in bivariate samples . . . . .	148
7.6	Optimal spacing of order statistics in large samples . . . . .	150
7.7	Quick tests . . . . .	155
7.8	Probability plotting . . . . .	161
7.9	Quality control . . . . .	163
	<i>Exercises</i> . . . . .	165
8	THE TREATMENT OF OUTLIERS	170
8.1	The problem of outliers and slippage . . . . .	170
8.2	Tests for outliers . . . . .	172
8.3	Slippage tests . . . . .	178
8.4	The performance of tests for outliers . . . . .	184
8.5	The effect of outlier rejection on the estimation of parameters	191
	<i>Exercises</i> . . . . .	195
9	ASYMPTOTIC THEORY	199
9.1	Introduction . . . . .	199
9.2	The asymptotic joint distribution of quantiles . . . . .	201
9.3	The asymptotic distribution of the extreme . . . . .	204
9.4	Extreme-value theory—generalizations for iid variates . . . . .	210
9.5	Extreme-value theory for dependent variates . . . . .	214
9.6	The asymptotic distribution of linear functions of order statistics . . . . .	216
9.7	Optimal asymptotic estimation by order statistics . . . . .	218
	<i>Exercises</i> . . . . .	223
