

Contents

1. A Conceptual Foundation	1
Theories and Conceptual Systems	2
Theory Formalization—The Model	3
Deduction, Operationalization, Observation	3
Description of Observed Data	4
Testing the Support Value of the Data	9
2. Probability Models	12
Experiments	13
Probability Theory	17
The Language of Probability Theory	21
Types of Events and Results: Measurement	21
Specifying Probabilities	22
Graphical Representation of Probability Models	36
An Illustration: An Experiment and Its Model	38
Suggested Reading	41
Glossary	41
Problems	42
3. The Mathematics of Events: Set Theory	45
Sets	45
Subsets	47

Graphic Representation of Sets	48
Operations on Sets	49
The Algebra of Sets	52
Numbers as Sets	55
Functions on Sets	60
Suggested Reading	60
Glossary	61
Problems	62
4. Sample Spaces and Probability	64
Sample Space	64
Probability in Sample Spaces	70
Theorems on Probability	75
Suggested Reading	80
Glossary	80
Problems	81
5. Conditional Probability and Independence	83
Probability of Intersections	84
Conditional Probability	85
Independence and Causality	89
Independence of Several Outcomes	93
Algebra of Conditional Probability	99
Independence, Dependence, and Intersection	99
Suggested Reading	100
Glossary	100
Problems	101
6. Sampling and Probability	103
Populations and Samples	103
Repeated Experiments	104
Four Types of Experiments	107

Suggested Reading	115
Glossary	115
Problems	116
7. Random Variables and Probability Distributions	119
Random Variables	120
Examples	120
Indicator Random Variables	121
Probability and Random Variables	121
A Special Case: The Binomial Random Variable	123
Probability Distributions of Random Variables: Probability Functions	126
Probability Distributions of Random Variables: Distribution Functions	129
An Application—Concept Learning	131
Suggested Reading	137
Glossary	137
Problems	139
8. Expectations and Variances of Random Variables	140
“Location” of a Random Variable	141
Properties of Expectation	146
Laws of Expectation	147
Expectation of the Binomial Random Variable	149
Measures of Dispersion or Spread of a Random Variable	150
Properties of the Variance	155
Laws of Variance	158
Variance of a Binomial Random Variable	160
Suggested Reading	160
Glossary	161
Problems	162

9. Continuous Random Variables	164
Probability Density Functions	165
An Introduction to the Integral Calculus	169
Application to Probability Density Functions	173
The Distribution Function	174
Observations on Continuous Random Variables	176
Graphs of Observations on Continuous Random Variables	178
Computation	180
Suggested Reading	180
Glossary	181
Problems	182
10. A Continuous Random Variable: The Normal Distribution	185
The Normal Approximation to the Binomial	186
Normal Distribution and Density Functions	192
Standardized and Nonstandard Normal	195
Goodness of Approximation of Normal to Binomial	197
The Distribution of Sums of Random Variables	197
Sources of Normal Distributions in Psychology	199
Suggested Reading	205
Glossary	205
Problems	206
11. Means and Variances of Samples	209
Parameters and Estimates	210
Estimation of μ in Sampling	217
Estimation of μ with Measurements	221
The Algebra of Means	224
Estimation of σ^2	225
The Algebra of Sample Variances	229
Sample Standard Deviation	230
Chebyshev's Inequality for \bar{X} and S_X^2	231
Suggested Reading	234

Glossary	234
Problems	236
12. Sampling Distributions of Means and Variances	239
Distribution of the Sample Mean with σ^2 Known	240
Sample Variances as Random Variables	244
Chi Square Distributed Random Variables	244
Sampling Distribution of Sample Variances	249
Distribution of \bar{X} with σ^2 Unknown	254
Interval Estimates	261
Degrees of Freedom as Number of Unconstrained Observations	268
Suggested Reading	270
Glossary	271
Problems	272
13. Principles of Statistical Inference: Philosophy	275
Reality and Empirical Knowledge	276
Degree of Credibility and Inference	278
Sources of Error	280
Categorical versus Probabilistic Inferences	281
Inference as a Conditional Statement	282
An Example: Mathematics of a Lady Tasting Tea	283
Statement of Experiment	283
Interpretation and Its Reasoned Basis	284
The Test of Significance	284
The Null Hypothesis	286
Randomization; The Physical Basis of the Validity of the Test	287
The Effectiveness of Randomization	288
The Sensitiveness of an Experiment, Effects of Enlargement and Repetition	289
Qualitative Methods of Increasing Sensitiveness	290
Suggested Reading	292

14. Principles of Statistical Inference: Basic Concepts	293
Basic Definitions	295
A Second Kind of Error	305
Two-Sided Tests	309
Level of Significance and Power	317
Sample Size and Power	318
Suggested Reading	324
Glossary	324
Problems	325
15. Significance: Statistical and Scientific	327
Two Specific Hypotheses and Utility	327
Two Specific Hypotheses Without Utility	335
One Specific Hypothesis Without Utility	336
Post-Hoc Evaluation	341
Suggested Reading	342
Glossary	342
Problems	343
16. The One-Sample Problem	345
Hypotheses Regarding Expectations	346
Case A: $X: N(\mu_X, \sigma_X^2)$, σ_X^2 Known	347
Case B: X Nonnormal, σ^2 Known	359
Case C: $X: N(\mu_X, \sigma_X^2)$, σ_X^2 Unknown	359
Case D: X Nonnormal and σ^2 Unknown	362
Transformations	365
Hypotheses Regarding Variances	366
Suggested Reading	369
Glossary	369
Problems	371
17. The Two-Sample Problem	374
Design of Experiments	374
Statistical Procedures	382

Statistical Procedures: Independent Samples	382
Statistical Procedures: Repeated Observations	397
Hypotheses Concerning Variances	404
Suggested Reading	409
Glossary	409
Problems	411
18. The Many-Sample Problem, Part I	412
The Many-Experiments Approach	412
Factors and Variables and Groups	414
The Analysis of Variance	417
Between and Within	420
A Single-Factor Problem	422
Repeated Measures on One Factor	446
Suggested Reading	459
Glossary	460
Problems	463
19. The Many-Sample Problem, Part 2	465
A Two-Factor Design with Randomized Groups	465
Higher Order Factorial Designs	490
Repeated Measures in Two-Way and Higher Order Factorials	501
Detailed Analyses Within a Many-Sample Problem	507
The Random Effects Model	517
Rules for Forming EMS's and Variance Ratios	522
Suggested Reading	525
Glossary	525
Problems	530
20. Regression and Correlation	532
Jointly Distributed Random Variables	535
Sampling Jointly Distributed Random Variables	553

Sampling Distributions of Statistics for Jointly Distributed Variables	569
Some Special Techniques	582
Some Special Considerations in Regression and Correlation	591
Multivariate Regression and Correlation	595
Suggested Reading	597
Glossary	598
Problems	603
21. Pearson Chi Square	606
The General Case and Its Theoretical Basis	607
Hypotheses about “Goodness of Fit”	610
Hypotheses about Independence and Association	616
Some Computational Conveniences	620
Suggested Reading	621
Glossary	621
Problems	622
Appendix: Tables and Charts	624
Index	683
