Introduction	xiii
A Useful Notation	xviii
Part 1 Operational Foundations	1
1 Decision-making and Probability	3
1.1 Introduction	3
1.2 The exploration of oil deposits	4
1.3 An experiment: forecasting the result of football matches	5
1.4 Responses to test items	8
1.5 Probability theory deduced from the notion of admissible decision	9
1.6 The complete construction of probability theory	11
2 Conditional Probabilities and Decision Theory	13
2.1 Introduction	13
2.2 The case of conditional probabilities	14
2.3 Proof	15
2.4 The lines of uniform improvement	17
3 Does it Make Sense to Speak of "Good Probability Appraisers"?	19
4 Methods for Discriminating Levels of Partial Knowledge Concerning a Test Item	25
4.1 Introduction	25
4.2 How to make use of decision theory and why	28
4.3 The continuous method	29
4.4 Some practicable methods: (A) purely rank-order methods	32
4.5 Some practicable methods: (B) flexible schemes with two or three permitted levels of response	34
4.6 Further approaches: (C) strict least distance methods	39

4.7	Some more methods: (D) least distance methods (flexible)	47
4.8	Aspects deserving further discussion	50
4.9	How to choose a suitable method	53
4.10	On some factors influencing information	57
4.11	How to operate appropriately in the long run	60
4.12	Some other problems	61
Part 2 Axiomatic Foundations		65
5	On the Axiomatization of Probability Theory	67
5.1	Introduction	67
5.2	Outline of chapter	68
5.3	The axioms of Kolmogorov	68
5.4	Topics for discussion	69
5.5	Events and elementary cases	69
5.6	Domains of events and probabilities	72
5.7	On different approaches to probability	73
5.8	Some consequences of the formal approach	74
5.9	Finite additivity	75
5.10	The domain of uniqueness of the extension	79
5.11	Geometrical interpretations	80
5.12	The definition of conditional probability	81
5.13	An analytical interpretation	82
5.14	The basic problem	83
5.15	Complete additivity	84
5.16	Some observations	85
5.17	Some examples	86
5.18	Preliminaries	86
5.19	Complete additivity and the asymptotic approach	89
5.20	Complete additivity and the subjectivistic approach	90
5.21	Complete additivity and perfect additivity	92
5.22	Closure and the different approaches to probability	93
5.23	Reasons in favour of closure	95
5.24	The continuity postulate	96
5.25	Some remarks	97
5.26	The paradox of non-conglomerability	98
5.27	Continuity with respect to conditioning	100
5.28	The case of hypotheses of zero probability	100
5.29	Some observations on probabilities defined through limiting processes	101
5.30	Examples of non-conglomerability	102
5.31	Critical remarks on the notion of conditional probability	104

5.32	Toward a general formulation	105
5.33	Random quantities and complete additivity	105
5.34	Continuity on linear spaces	107
5.35	The continuous extension	108
5.36	An outline of an abstract theory of integration	110
5.37	Some additional problems	111
6	On the Abstract Theory of Measure and Integration	115
6.1	Introduction	115
6.2	Preliminaries	116
6.3	Measure and integral	117
6.4	The axioms	118
6.5	Extension of measures	119
6.6	Further problems	120
6.7	Compatible measures	121
6.8	Invariant measures	121
6.9	Complete additivity and continuity	122
6.10	Continuity on the entire \mathcal{F}	124
6.11	Closure of a set with respect to a linear space	124
6.12	Further remarks on continuity	125
6.13	Special methods of extension	126
6.14	Further developments	127
7	The Structure of Distributions on Abstract Spaces	129
7.1	Preliminaries	129
7.2	Discrete masses	131
7.3	Agglutinated masses	131
7.4	Continuous masses	133
7.5	“Measures” and condensed masses	134
7.6	Diffuse masses (“absolutely continuous” with respect to m)	135
7.7	Approximation by means of masses with finite “density”	137
7.8	Conclusions	139
Part 3	Induction and Statistics	141
8	How to Choose the Initial Probabilities	143
9	Probability, Statistics and Induction: Their Relationship According to the Various Points of View	147
9.1	Introduction	147
9.2	Historical and comparative survey: from the beginnings to the crisis of the classical formulation	157

9.3	The rise of objectivistic concepts	162
9.4	The erosion of the objectivistic positions	175
9.5	Critical examination of controversial aspects	187
9.6	Reconstruction of the classical formulation according to the subjectivistic viewpoint	209
10	On the Notion of Partial Exchangeability	229
10.1	Introduction	229
10.2	Example with three subgroups	231
10.3	Example with four subgroups	243
	Bibliography	247
	Index	259
