

CONTENTS

CHAPTER 1. INTRODUCTORY CONSIDERATIONS

	PAGE
§ 1. The probability concept of the language of everyday life.....	3
§ 2. The historical development of the scientific concept of probability	5
§ 3. Remarks about the plan of the book.....	10

CHAPTER 2. INTRODUCTION TO SYMBOLIC LOGIC

§ 4. The calculus of propositions.....	15
§ 5. The method of derivation.....	23
§ 6. The calculus of functions.....	26
§ 7. The calculus of classes.....	33
§ 8. Axiomatic systems.....	38

CHAPTER 3. ELEMENTARY CALCULUS OF PROBABILITY

§ 9. The probability implication.....	45
§ 10. The abbreviated notation.....	49
§ 11. The rule of existence.....	52
§ 12. The axioms of univocality and of normalization.....	53
§ 13. The theorem of addition.....	57
§ 14. The theorem of multiplication.....	61
§ 15. Reduction of the multiplication theorem to a weaker axiom.....	65
§ 16. The frequency interpretation.....	67
§ 17. The origin of probability statements.....	70
§ 18. Derivation of the axioms from the frequency interpretation.....	72
§ 19. The rule of elimination.....	76
§ 20. The general theorem of addition.....	82
§ 21. The rule of the product.....	90
§ 22. The rule of reduction.....	96
§ 23. The relation of independence.....	102
§ 24. Complete probability systems.....	106
§ 25. The mathematical formalization of the probability calculus.....	116
Appendix to chapter 3. Exercises and solutions.....	123

CHAPTER 4. THEORY OF THE ORDER OF PROBABILITY SEQUENCES

§ 26. The task of the theory of order.....	131
§ 27. Phase probabilities.....	132

	PAGE
§ 28. Axioms concerning the theory of order.....	136
§ 29. Sequences without aftereffect.....	141
§ 30. Normal sequences.....	143
§ 31. Some numerical problems referring to normal sequences.....	151
§ 32. Mutually dependent normal sequences.....	154
§ 33. Probability transfer.....	159
§ 34. The probability lattice.....	167

CHAPTER 5. PROBABILITY SEQUENCES WITH COÖRDINATED AMOUNTS

§ 35. The average of a sequence of quantities.....	177
§ 36. Formation of an average when the summation is extended to infinitely many terms.....	183
§ 37. The dispersion.....	188
§ 38. Average and dispersion for a combination of events.....	192
§ 39. Average and dispersion in the lattice.....	195

CHAPTER 6. CONTINUOUS EXTENSIONS OF THE CONCEPT OF PROBABILITY SEQUENCE

§ 40. The geometrical interpretation of the axiom system.....	203
§ 41. Definition of probability sequences with continuous attribute....	205
§ 42. Empirical determination of a probability function.....	209
§ 43. The one-dimensional attribute space.....	219
§ 44. Many-dimensional attribute spaces.....	223
§ 45. Relative probability functions.....	228
§ 46. Continuous probability sequences.....	237
§ 47. Competition of chances.....	250

CHAPTER 7. THE FREQUENCY PROPERTIES OF PROBABILITY SEQUENCES

§ 48. The frequency sequences.....	261
§ 49. The theorem of Bernoulli.....	262
§ 50. The significance of Bernoulli's theorem.....	274
§ 51. The amplified Bernoulli theorem.....	281
§ 52. The frequency dispersion.....	283
§ 53. The dispersion of nonnormal sequences.....	290
§ 54. A simple interpretation of the dispersion.....	292

	PAGE
§ 55. A simple derivation of Bernoulli's theorem	293
§ 56. Poisson sequences	296
§ 57. Bernoulli sequences	303

CHAPTER 8. THEORY OF PROBABILITIES OF A HIGHER LEVEL

§ 58. Probabilities of a higher level	311
§ 59. Constants in probability expressions	314
§ 60. Operations with probabilities of the second level	318
§ 61. The dispersion in a horizontally inhomogeneous lattice	324
§ 62. The inductive inference	326

CHAPTER 9. THE PROBLEM OF APPLICATION

§ 63. The problem	337
§ 64. The logical form of limit statements	338
§ 65. The necessity of the concept of the limit for the frequency interpretation	344
§ 66. The meaning of limit statements	347
§ 67. The assertability of probability statements in the frequency interpretation	350
§ 68. The so-called <i>a priori</i> determination of the degree of probability	352
§ 69. Explanation of the equiprobability in mechanisms of games of chance	355
§ 70. The three forms of an <i>a posteriori</i> determination of degrees of probability	359
§ 71. Attempts at a single-case interpretation of probability	366
§ 72. The frequency interpretation of the probability of the single case	372
§ 73. The logical interpretation of probability	378
§ 74. Probability meaning	382

CHAPTER 10. PROBABILITY LOGIC

§ 75. The problem of a multivalued logic	387
§ 76. A quantitative logic of an individual verifiability	389
§ 77. Probability as a property of propositional sequences	395
§ 78. The probability of finite propositional sequences	397
§ 79. Truth tables of probability logic	398
§ 80. Truth tables of the logic of modalities	403
§ 81. The logic of weight	409
§ 82. Derivations and tautologies in probability logic	413
§ 83. The quantitative negation	420

CHAPTER 11. INDUCTION

	PAGE
§ 84. The various forms of induction in empirical science.....	429
§ 85. The probability of hypotheses.....	434
§ 86. Induction by enumeration in advanced knowledge.....	442
§ 87. The rule of induction.....	444
§ 88. Anticipative posits in advanced knowledge.....	451
§ 89. The method of correction.....	461
§ 90. The hierarchy of posits.....	465
§ 91. The justification of induction.....	469
Index.....	485
