

CONTENTS

Preface v

Part One ELEMENTARY STATISTICS AND PROBABILITY THEORY

one	Introduction	1
	The field of statistics; The usefulness and limitations of statistics; Use of digital computers in statistical computations; Organization of book	
two	Certain Definitions Used in Statistics	12
	Measures of location, dispersion, skewness, kurtosis; Moments	
three	Frequency Distributions in One Dimension	18
	Ungrouped and grouped measurements; Measures of "middle," "spread," skewness and excess; Schemes for calculating mean and standard deviations	
four	Combinatorial Mathematics	29
	Sets, variable, relation, function, inverse; Partitions, selections, samples, permutations, combinations; Algebra of events	
five	Elementary Probability Theory	42
	Definitions and axioms; Conditional probabilities; Events expressible in terms of continuous variables; Probability distributions; Probability functions; Statistical independence; Mathematical expectation; Description of distributions by Stieltjes integrals; δ -function	
six	Probability Distributions in One Dimension	62
	Discrete probability distributions; Parameters which describe a discrete distribution; Causal distribution; Equal probability distribution; General discrete distribution; Pascal's distribution; Pólya's distribution; Probability distributions continuous	

	on an interval; Parameters which describe continuous distribution; Rectangular distribution; Cauchy's distribution; Laplace's distribution; Sheppard's correction; Folded distributions; Truncated and censored distributions	
seven	Generating and Characteristic Functions	81
	Generating functions; Characteristic functions; Multivariable case; Convolution	
eight	Binomial, Negative Binomial, Hypergeometric and Related Distributions	92
	Binomial distribution; DeMoivre's theorem; Correction for continuity; Multinomial distribution; Negative binomial distribution; Geometric distribution; Hypergeometric distribution	
nine	Poisson, Exponential and Weibull Distributions	105
	Poisson distribution; Exponential distribution; Weibull distribution	
ten	Normal Distribution	110
	Properties; Probability of occurrence of certain deviations; Fitting normal distribution to frequency polygon; Random sampling from normal distribution; Log normal distribution	
eleven	Probability Distributions in Two or More Dimensions	125
	The two-dimensional case; Probability ellipse; Normal probability integral over circular disk; The three-dimensional case; Probability ellipsoid; Graphical methods; Transformation of variables	
twelve	Analysis of Pairs of Measurements, Regression Theory, Orthogonal Polynomials, Time Series	150
	Analysis of pairs of measurements; General regression and correlation; Time series; Confidence intervals for regression lines when dependent variable is normally distributed; Orthogonal polynomials	
thirteen	Sampling Distributions	177
	Estimators; Sampling distributions; Sample range; Order statistics; Use of random numbers	
fourteen	Statistical Inference, Significance Tests and Confidence Intervals	223
	Statistical inference; Tests of significance; Confidence intervals; Type I and Type II errors; Tolerance limits; Non-parametric tests	
fifteen	Design of Experiments and Analysis of Variance	270
sixteen	Finite Differences. Interpolation	299

seventeen	Sequential Analysis, Sampling Inspection, Quality Control, Reliability Theory	308
	Sequential analysis; Sampling inspection by attributes; Quality control; Acceptance sampling plans based on parameters; Reliability theory	
eighteen	Short Table of Integrals. Some Mathematical Relationships	340
 Part Two TABLES		
	Discrete Distribution Functions	347
1.	Binomial Distribution Function	347
2.	Summed Binomial Distribution Function	351
3.	Incomplete Beta Function Ratio	355
4.	Binomial Coefficients	357
5.	Values of \sqrt{npq}	358
6.	Values of \sqrt{pq}	358
7.	Poisson Distribution Function	359
8.	Summed Poisson Distribution Function	363
	Continuous Distribution Functions	367
9.	Normal Distribution	367
10.	<i>F</i> -Distribution	376
11.	<i>z</i> -Distribution	380
12.	<i>t</i> -Distribution	383
13.	<i>t</i> -Distribution; Cumulative Distribution Function	384
	Nomogram for Calculating $1 - (1 - p)^n$	385
14.	χ^2 -Distribution	386
15.	Values of e^{-x}	388
	Factorials and Their Logarithms	390
16.	Factorials and Logarithms of Factorials	390
17.	Gamma Function	391
18.	Common Logarithms of Gamma Function	392
19.	Factorials and Their Reciprocals	392
	Tolerance Factors for Normal Populations	393
20.	Two-sided Tolerance Factors for Normal Populations	393
21.	One-sided Tolerance Factors for Normal Populations	394
	Random Numbers	395
22.	Random Numbers	395
23.	Random Normal Numbers	400
	Powers, Roots, Reciprocals	410
24.	Squares, Square-roots, and Reciprocals	410

**Natural Trigonometric Functions, Natural and Common
Logarithms. 420**

25. Natural Trigonometric Functions 420

26. Natural Logarithms of Numbers 421

27. Common Logarithms of Numbers 425
