

# CONTENTS

|   | Page       |
|---|------------|
| <b>Chapter 1 SET THEORY</b> .....   | <b>1</b>   |
| Introduction. Sets, elements. Set operations. Finite and countable sets. Product sets. Classes of sets.   |            |
| <hr/>   |            |
| <b>Chapter 2 TECHNIQUES OF COUNTING</b> .....   | <b>16</b>  |
| Introduction. Fundamental principle of counting. Factorial notation. Permutations. Permutations with repetitions. Ordered samples. Binomial coefficients and theorem. Combinations. Ordered partitions. Tree diagrams.  |            |
| <hr/>   |            |
| <b>Chapter 3 INTRODUCTION TO PROBABILITY</b> .....  | <b>38</b>  |
| Introduction. Sample space and events. Axioms of probability. Finite probability spaces. Finite equiprobable spaces. Infinite sample spaces.  |            |
| <hr/>   |            |
| <b>Chapter 4 CONDITIONAL PROBABILITY AND INDEPENDENCE</b> .....   | <b>54</b>  |
| Conditional probability. Multiplication theorem for conditional probability. Finite stochastic processes and tree diagrams. Partitions and Bayes' theorem. Independence. Independent or repeated trials.  |            |
| <hr/>   |            |
| <b>Chapter 5 RANDOM VARIABLES</b> .....   | <b>74</b>  |
| Introduction. Distribution and expectation of a finite random variable. Variance and standard deviation. Joint distribution. Independent random variables. Functions of a random variable. Discrete random variables in general. Continuous random variables. Cumulative distribution function. Tchebycheff's inequality. Law of large numbers. |            |
| <hr/>   |            |
| <b>Chapter 6 BINOMIAL, NORMAL AND POISSON DISTRIBUTIONS</b> .....   | <b>105</b> |
| Binomial distribution. Normal distribution. Normal approximation to the binomial distribution. Central limit theorem. Poisson distribution. Multinomial distribution.   |            |
| <hr/>   |            |
| <b>Chapter 7 MARKOV CHAINS</b> .....  | <b>126</b> |
| Introduction. Probability vectors, stochastic matrices. Regular stochastic matrices. Fixed points and regular stochastic matrices. Markov chains. Higher transition probabilities. Stationary distribution of regular Markov chains. Absorbing states.  |            |
| <hr/>   |            |
| <b>INDEX</b> .....  | <b>152</b> |
