## **PART I. PROBABILITY**

### *Probability Theory*

#### **Lagrange's Theorem and Thin Subsequences of Squares** **3**

PAUL ERDÖS and MELVYN B. NATHANSON

References	<b>8</b>
------------	----------

#### **A Kind of Random (= Stochastic) Integral** **11**

D. A. KAPPOS

0. Random Functions	<b>13</b>
1. Measurable Random Functions	<b>13</b>
2. Random (= Stochastic) Measure	<b>18</b>
3. Random Integral	<b>21</b>
References	<b>28</b>

#### **Continuation of Distribution Functions** **29**

H. -J. ROSSBERG, B. JESIAK, and G. SIEGEL

1. Introduction	<b>29</b>
2. The Normal Distribution Function	<b>32</b>

3. Analytic Distribution Functions	34
4. Continuation Theorems for Special Classes of i.d. d.f.	37
5. Uniqueness of Symmetric Distribution Functions	45
References	46

## **The Arc Sine Law of Paul Lévy** 49

LAJOS TAKÁCS

1. Introduction	49
2. The Coin Tossing Game	50
3. Paul Lévy's Arc Sine Law	51
4. An Alternative Approach	53
5. Exact Distributions	55
6. Notes	56
7. Lévy's Heuristic Method	58
8. The Case of Independent Sequences	59
9. The Case of Dependent Sequences	61
References	63

### *Limit Theorems*

## **General Limit Theorems for Products with Applications to Convolution Products of Measures** 65

HARALD BERGSTRÖM

1. Introduction	65
2. Some Fundamental Identities and Inequalities	67
3. Convergence of Powers in Seminorms to Infinitely Divisible Elements	70
4. Convergence of Products in Seminorms	74
References	76

## **Stable Limit Law and Weak Law of Large Numbers for Hilbert Space with "Large- $\mathcal{O}$ " Rates** 77

P. L. BUTZER, L. HAHN, and M. TH. ROECKERATH

1. Introduction	77
2. Notations and Preliminaries	80
3. Two General Large- $\mathcal{O}$ Approximation Theorems	83
4. Stable Limit Law on $H$ with Rates	87
5. The Central Limit Theorem on $H$	89
6. The Weak Law of Large Numbers	95
7. Limit Theorems for Random Vectors in $\mathbb{R}^m$	97
References	99

<b>The Arithmetic of Distribution Functions</b>	<b>101</b>
ROGER CUPPENS	
1. Introduction	102
2. The Class $L$	103
3. Infinitely Divisible Characteristic Functions with Absolutely Continuous Spectral Functions	104
4. Products of Poisson-Type Characteristic Functions	105
5. Independent Sets	107
6. Infinitely Divisible Characteristic Functions with Continuous Spectral Functions	108
7. Indecomposable Laws	109
8. Indecomposable Factors	110
9. $\alpha$ Decompositions	111
References	112
<b>On the Tails of a Class of Infinitely Divisible Distributions</b>	<b>115</b>
CARL-GUSTAV ESSEEN	
1. Introduction	115
2. Some Lemmas	118
3. Proof of Theorem 1.2	120
4. On Another Theorem of Elliott and Erdős	121
References	122
<b>Fourier Transform Methods in the Study of Limit Theorems in a Hilbert Space</b>	<b>123</b>
R. G. LAHA and V. K. ROHATGI	
1. Introduction	123
2. Preliminaries	124
3. Infinitely Divisible Probability Measures	128
4. The General Central Limit Problem in a Hilbert Space	129
5. Self-Decomposable and Stable Measures in $\mathcal{H}$	132
6. Semi-Stable Measures in $\mathcal{H}$	136
References	137
<b>Polynomials in Gaussian Variables and Infinite Divisibility?</b>	<b>139</b>
M. ROSENBLATT	
References	142

*Stochastic Processes*

<b>On the Nondifferentiability of the Wiener Sheet</b>	<b>143</b>
M. CSÖRGŐ and P. RÉVÉSZ	
1. Introduction	143
2. The Nondifferentiability of the Wiener Sheet in the Direction of the $X$ Axis	144
3. The Wiener Sheet Is Nowhere Differentiable in Any Direction	148
References	149
<b>The Degree of Vertices on a Randomly Growing Tree</b>	<b>151</b>
J. GANI and R. MORTON	
1. Introduction	151
2. The State-Homogeneous Case	153
3. A Simple Practical Example	155
References	156
<b>Uniform Convergence of Random Trigonometric Series and Sample Continuity of Weakly Stationary Processes</b>	<b>157</b>
TATSUO KAWATA	
1. Introduction	157
2. Sequences of Random Variables Satisfying the Condition $M_r$	159
3. Uniform Convergence of Random Trigonometric Series	161
4. Weakly Stationary Process of Class $\mathcal{M}_r$ : Approximate Fourier Series	166
5. Sample Continuity of a Weakly Stationary Process of $\mathcal{M}_r$	168
References	170
<b>Stochastic Equations Driven by Random Measures and Semimartingales</b>	<b>173</b>
MICHEL METIVIER	
Introduction	173
Notations	174
1. Some Preliminaries on Random Measures	175
2. Stochastic Equations Driven by White Random Measures	179
3. Equations Driven by Random Measures and Semimartingales	185
References	187

**PART II. APPLICATIONS OF PROBABILITY***Information Theory***Derivations and Information Functions  
(A Tale of Two Surprises and a Half)**

191

J. ACZÉL

- |  |     |
|--|-----|
| 1. Introduction                              | 191 |
| 2. General and Regular Information Functions | 194 |
| 3. Nonnegative Information Functions         | 196 |
| 4. Solutions of (12)                         | 198 |
| References                                   | 199 |

**Entropy of the Sum of Independent Bernoulli Random Variables and of the Multinomial Distribution**

201

L. A. SHEPP and I. OLKIN

- |   |     |
|---|-----|
| 1. Introduction   | 201 |
| 2. Entropy of Sum of Independent Bernoulli Random Variables | 202 |
| 3. Entropy of the Multinomial Distribution                  | 204 |
| References  | 206 |

**On the Concept and Measure of Information Contained in an Observation**

207

ISTVÁN VINCZE

- |  |     |
|--|-----|
| Introduction   | 207 |
| 1. Derivation of a Measure for the Information Contained in an Observation | 208 |
| 2. The Average Information   | 210 |
| 3. Fisher Information, as Information Density                              | 211 |
| 4. Connection with the Variance Bound of the Cramér–Fréchet–Rao Inequality | 212 |
| 5. The Bayesian Approach   | 212 |
| 6. Can the Measure of Information be a Distance in the Parameter Space?    | 213 |
| References   | 214 |

*Statistical Theory***The Empirical Characteristic Process When Parameters Are Estimated**

215

SÁNDOR CSÖRGŐ

- |                 |     |
|-----------------|-----|
| 1. Introduction | 216 |
| 2. Notation     | 220 |

3. Assumptions	220
4. The Integrated Squared Error Estimator	221
5. The Integrated Error Estimator	224
6. The Parameter Estimated Empirical Characteristic Process with the Integrated Squared Error Estimator	224
7. The Parameter Estimated Empirical Characteristic Process with the Integrated Error Estimator	229
8. Remarks	229
References	230
<b>Identifiability</b>	<b>231</b>
M. DEISTLER and G. TINTNER	
1. Introduction	231
2. Identification in Errors in the Variables Models	232
3. Identifiability of ARMA Systems	237
References	244
<b>On a Multivariate Extension of the Behrens – Fisher Law</b>	<b>247</b>
DANIEL DUGUÉ	
References	253
<b>Constant Regression of Quadratic Statistics on the Sum of Random Variables Defined on a Markov Chain</b>	<b>255</b>
B. GYIRES	
1. Introduction	255
2. Preliminaries	256
3. On the Constant Regression of Quadratic Forms on the Sum of Random Variables Defined on a Markov Chain	260
4. The Characterization of the Normal Law by the Constant Regression of Quadratic Statistics on the Sum of Random Variables Defined on a Markov Chain	263
References	266
<b>Invariance Principles for Rank Statistics for Testing Independence</b>	<b>267</b>
MADAN L. PURI and LANH T. TRAN	
1. Introduction	268
2. Assumptions and Some Preliminary Lemmas	268
3. Order of Magnitude of the Remainder Term	270
4. Invariance Principles	281
References	281

**Integral Transformations of Distributions and Estimates of Parameters of Multidimensional Spherically Symmetric Stable Laws**

**283**

V. M. ZOLOTAREV

1. Introduction	<b>283</b>
2. Some Properties of Spherically Symmetric Distributions	<b>284</b>
3. Integral Transformations of Distributions	<b>292</b>
4. The Estimation of Parameters of Spherically Symmetric Stable Laws	<b>298</b>
5. Comments	<b>302</b>
References	<b>304</b>

**Eugene Lukacs: Bibliography**

**307**
