CHAPTER 0. NOTATION	1
CHAPTER I. MEASURABLE SPACES	7
<u>σ-fields and random variables</u>	7
Definition of σ -fields (no.1). Random variables (nos. 2 to 4). σ -fields generated by subsets, etc... (nos. 5 to 7). Product σ -fields (no. 8). Atoms, separable σ -fields (nos. 9 to 12).	
<u>Real-valued random variables</u>	11
First properties (nos. 13 to 18). The monotone class theorem (nos. 19 to 24).	
CHAPTER II. PROBABILITY LAWS AND MATHEMATICAL EXPECTATIONS	17
<u>Summary of integration theory</u>	17
Probability laws (nos. 1 to 4). Expectations, Lebesgue's theorem, etc... (nos. 5 to 9). Convergence of random variables (no. 10). Image laws (nos. 11 to 12). Integration of laws, Fubini's Theorem (nos. 13 to 16).	
<u>Supplement on integration</u>	21
Uniform integrability (nos. 17 to 22). Vitali-Hahn-Saks Theorem (no. 23). Weak compactness, Dunford-Pettis Compactness Theorem (nos. 24 to 26). Rapid filters (nos. 27 to 29).	
<u>Completion, independence, conditioning</u>	30
Internally negligible sets (nos. 30 to 32). Independence (nos. 33 to 35). Conditional expectations (nos. 36 to 40). List of their properties (nos 41 to 42). Conditional independence (nos. 43 to 45).	
CHAPTER III. COMPLEMENTS TO MEASURE THEORY	39
<u>Analytic sets</u>	39
Pavings (no.1) Compact pavings (nos. 2 to 6). Analytic sets and closure properties (nos. 7 to 13). The separation theorem (no. 14). Souslin measurable spaces, etc... (nos. 15 to 17). Direct images (nos. 18 to 20). The Souslin-	

Lusin theorem (nos. 21 to 23). Blackwell spaces (nos. 24 to 26).

Capacities

51

Choquet capacities (no. 27). Choquet's theorem (nos. 28 to 29). Construction of capacities (nos. 30 to 32). Applications : measurability of analytic sets (no. 33), Carathéodory's theorem (no. 34) and Daniell's theorem (no. 35); measures on compact spaces (no. 36) and Lusin spaces (nos. 37 to 38). Left-continuous (nos. 39 to 40) and right-continuous (nos. 41 to 42) capacities. Another proof of the separation theorem (no. 43). Measurability of debuts and cross section theorem (nos. 44 to 45).

Bounded Radon measures

65

Radon measures (nos. 46 to 47). Filtering families of l.s.c. or u.s.c. functions (nos. 48 to 50). Inverse limits : Kolmogorov's theorem (nos. 51 to 52) and Prokhorov's theorem (no. 53). Strict convergence (nos. 54 to 58). Prokhorov's compactness criterion (no. 59). The space of probability laws (nos. 60 to 62). Lindelöf spaces (nos. 63 to 66). Non-metrizable Souslin and Lusin spaces (nos. 67 to 69). Desintegration of measures (nos. 70 to 74).

(Nos 75 to 86 appear in the appendix, see below).

CHAPTER IV. STOCHASTIC PROCESSES

83

General properties of processes

83

Processes (no. 1). Philosophy (nos. 2 to 5). Standard modifications and indistinguishable processes (nos. 6 to 8). Time laws canonical processes (nos. 9 to 10). Filtrations, adapted processes and philosophy (nos. 11 to 13). Progressivity (nos. 14 to 15).

Regularity of paths

89

Notation (no. 16). Processes on a countable dense set (nos. 17 to 19). Upcrossings and downcrossings, applications (nos. 20 to 23). Separable processes (nos. 24 to 30). Random closed sets (nos. 31 to 32). Progressivity of certain processes (nos. 33 to 34). Almost-equivalence (no. 35). Essential topology (nos. 36 to 39). Pseudo-paths (nos. 40 to 46).

Optional and predictable times

114

Definitions concerning filtrations (nos. 47 to 48). Stopping times (no. 49). Debuts (nos. 50 to 51). σ -fields associated to stopping times (nos. 52 to 54). Properties (nos. 55 to 59). Stochastic intervals (no. 60). Optimal and predictable σ -fields (nos. 61 to 63). Properties (nos. 64 to 68). Predictable times (nos. 69 to 74). Sequences foretelling a predictable time (nos. 75 to 78).

Totally inaccessible stopping times; classification (nos. 79 to 81). Quasi-left-continuous filtrations (nos. 82 to 83). Cross section theorems (nos 84 to 87). Sets with countable sections (no. 88).

Additional numbers on sets with countable sections (nos

Examples and supplements

143

Optional or predictable processes defined by limits (nos. 89 to 93). Canonical spaces (nos. 94 to 96), their predictable and optional σ -fields (nos. 97 to 98) and Galmarino's test (nos. 99 to 102). Decomposition of a stopping time (no. 103). Filtrations generated by a single stopping time (nos. 104 to 108).

APPENDIX TO CHAPTER III

156

Souslin schemes (nos. 75 to 77). Representation of Souslin and Lusin spaces as continuous images of Polish spaces (nos. 78 to 80). Isomorphisms between Lusin spaces (no. 80). Cross section theorem (nos. 81 to 82). The second separation theorem (83).

APPENDIX TO CHAPTER IV

163

Sets with un-countable sections (nos. 109 to 113). Derivatives of random sets (nos. 114 to 116). Sets with countable sections (nos. 117 to 118).
