<i>Preface</i>	iii
1. REVIEW OF BASIC CONCEPTS	1
1.1 Events	1
1.2 Probability	5
1.3 A method of constructing probabilities	12
1.4 Classical probability spaces	19
1.5 Simple random variables	20
1.6 Conditional probability: The elementary case	26
1.7 Independence of events	28
1.8 Random variables, distribution functions	33
References	38
2. EXPECTATION AND INTEGRAL, WEAK AND STRONG CONVERGENCE	41
2.1 Definitions of expectation and integral	41
2.2 Basic properties of expectation	45
2.3 The inequalities of Markov, Chebyshev, and Kolmogorov	48
2.4 Sequences of integrals	54
2.5 The strong law of large numbers: The proof of Theorem 1	57
2.6 Zero-one laws	62
2.7 Lebesgue–Stieltjes integrals	66
2.8 Weak convergence	76
References	82

3.	TRANSFORMS OF DISTRIBUTION	85
3.1	Characteristic functions: Basic properties	85
3.2	Characteristic functions: The uniqueness and continuity theorems	93
3.3	Classical forms of the central limit theorem, and a model for measurement errors	106
3.4	Characteristic functions: Inequalities	115
3.5	Multivariate characteristic functions	122
3.6	Laplace transforms	124
3.7	Generating functions	128
	References	132
4.	INFINITE SEQUENCES OF INDEPENDENT RANDOM VARIABLES: WEAK CONVERGENCE	135
4.1	Complete convergence of sums without normalization, infinite series	135
4.2	Decomposition of the normal distribution	146
4.3	Lévy's metric	150
4.4	Zolotarev's theorem on asymptotic normality, the theorem of Lindeberg and Feller	157
4.5	Speed of convergence: The Berry–Esseen theorem	165
4.6	The class L of limiting distributions	171
	References	182
5.	TRIANGULAR ARRAYS OF INDEPENDENT RANDOM VARIABLES, INFINITELY DIVISIBLE DISTRIBUTIONS	185
5.1	Introduction	185
5.2	More on infinitely divisible distributions	189
5.3	Convergence under UAN	196
5.4	Convergence to special distributions	204
	References	216
6.	INDEPENDENT AND IDENTICALLY DISTRIBUTED RANDOM VARIABLES	219
6.1	Cauchy's functional equation	219
6.2	Stable distributions	224
6.3	Regularly varying functions	232
6.4	Domains of attraction for stable distributions	238
6.5	The asymptotic theory of the extremes	244

6.6	The law of the iterated logarithm	253
	References	260
7.	CONDITIONAL EXPECTATION; MARTINGALES	261
7.1	Conditional expectation, given a discrete random variable	261
7.2	Radon–Nikodym theorem	266
7.3	Conditional expectation: The general case	271
7.4	Martingales	281
7.5	L_p spaces	291
7.6	Further limit theorems for martingales	297
7.7	Exchangeability, De Finetti's theorem	306
	References	312
8.	TOPICS IN THE THEORY OF STOCHASTIC PROCESSES	315
8.1	Foundations and basic concepts	315
8.2	Poisson process	321
8.3	Renewal processes	328
8.4	The Galton–Watson process; busy periods in queues	336
8.5	Markov chains	341
8.6	An invariance principle	353
	References	359
	<i>Hints for Solutions of Exercises</i>	361
	<i>Index</i>	397
