Preface	v
I Basic Probability	1
1 Trials and Events	3
1.1 Trials, Outcomes, and Events	3
1.2 Combinations of Events and Special Events	9
1.3 Indicator Functions and Combinations of Events	13
1.4 Classes, Partitions, and Boolean Combinations	16
2 Probability Systems	25
2.1 Probability Measures	25
2.2 Some Elementary Properties	30
2.3 Interpretation and Determination of Probabilities	33
2.4 Minterm Maps and Boolean Combinations	37
2a The Sigma Algebra of Events	44
3 Conditional Probability	49
3.1 Conditioning and the Reassignment of Likelihoods	49
3.2 Properties of Conditional Probability	55
3.3 Repeated Conditioning	66
4 Independence of Events	73
4.1 Independence as a Lack of Conditioning	73
4.2 Independent Classes	77
5 Conditional Independence of Events	89
5.1 Operational Independence and a Common Condition	89
5.2 Equivalent Conditions and Definition	96
5.3 Some Problems in Probable Inference	100
5.4 Classification Problems	111

6	Composite Trials	123
6.1	Events and Component Events	123
6.2	Multiple Success-Failure Trials	127
6.3	Bernoulli Trials	131
II	Random Variables and Distributions	143
7	Random Variables and Probabilities	145
7.1	Random Variables as Functions—Mapping Concepts . . .	145
7.2	Mass Transfer and Probability Distributions	151
7.3	Simple Random Variables	153
7a	Borel Sets, Random Variables, and Borel Functions	160
8	Distribution and Density Functions	165
8.1	The Distribution Function	165
8.2	Some Discrete Distributions	167
8.3	Absolutely Continuous Random Variables and Density Functions.	172
8.4	Some Absolutely Continuous Distributions	173
8.5	The Normal Distribution	182
8.6	Life Distributions in Reliability Theory	187
9	Random Vectors and Joint Distributions	197
9.1	The Joint Distribution Determined by a Random Vector .	197
9.2	The Joint Distribution Function and Marginal Distributions	200
9.3	Joint Density Functions	205
10	Independence of Random Vectors	215
10.1	Independence of Random Vectors	215
10.2	Simple Random Variables	220
10.3	Joint Density Functions and Independence	227
11	Functions of Random Variables	233
11.1	A Fundamental Approach and some Examples	233
11.2	Functions of More Than One Random Variable	239
11.3	Functions of Independent Random Variables	254
11.4	The Quantile Function	256
11.5	Coordinate Transformations	263
11a	Some Properties of the Quantile Function	266

III	Mathematical Expectation	273
12	Mathematical Expectation	275
12.1	The Concept	275
12.2	The Mean Value of a Random Variable	279
13	Expectation and Integrals	287
13.1	A Sketch of the Development	288
13.2	Integrals of Simple Functions	290
13.3	Integrals of Nonnegative Functions	293
13.4	Integrable Functions	294
13.5	Mathematical Expectation and the Lebesgue Integral . . .	296
13.6	The Lebesgue-Stieltjes Integral and Transformation of Integrals	297
13.7	Some Further Properties of Integrals	301
13.8	The Radon-Nikodym Theorem and Fubini's Theorem . . .	304
13.9	Integrals of Complex Random Variables and the Vector Space \mathcal{L}^2	307
13a	Supplementary Theoretical Details	312
13a.1	Integrals of Simple Functions	312
13a.2	Integrals of Nonnegative Functions	313
13a.3	Integrable Functions	315
14	Properties of Expectation	323
14.1	Some Basic Forms of Mathematical Expectation	323
14.2	A Table of Properties	326
14.3	Independence and Expectation	339
14.4	Some Alternate Forms of Expectation	342
14.5	A Special Case of the Radon-Nikodym Theorem	349
15	Variance and Standard Deviation	355
15.1	Variance as a Measure of Spread	355
15.2	Some Properties	357
15.3	Variances for Some Common Distributions	359
15.4	Standardized Variables and the Chebyshev Inequality . . .	364
16	Covariance, Correlation, and Linear Regression	371
16.1	Covariance and Correlation	371
16.2	Some Examples	374
16.3	Linear Regression	380

17	Convergence in Probability Theory	393
17.1	Sequences of Events	393
17.2	Almost Sure Convergence	396
17.3	Convergence in Probability	399
17.4	Convergence in the Mean	403
17.5	Convergence in Distribution	405
18	Transform Methods	409
18.1	Expectations and Integral Transforms	409
18.2	Transforms for Some Common Distributions	414
18.3	Generating Functions for Nonnegative, Integer-Valued Random Variables	419
18.4	Moment Generating Function and the Laplace Transform	423
18.5	Characteristic Functions	425
18.6	The Central Limit Theorem	428
18.7	Random Samples and Statistics	431
IV	Conditional Expectation	443
19	Conditional Expectation, Given a Random Vector	445
19.1	Conditioning by an Event	445
19.2	Conditioning by a Random Vector—Special Cases	448
19.3	Conditioning by a Random Vector—General Case	454
19.4	Properties of Conditional Expectation	459
19.5	Regression and Mean-Square Estimation	470
19.6	Interpretation in Terms of Hilbert Space \mathcal{L}^2	476
19.7	Sums of Random Variables and Convolution	478
19a	Some Theoretical Details	481
20	Random Selection and Counting Processes	491
20.1	Introductory Examples and a Formal Representation	492
20.2	Independent Selection from an Iid Sequence	496
20.3	A Poisson Decomposition Result—Multinomial Trials	499
20.4	Extreme Values	504
20.5	Bernoulli Trials with Random Execution Times	508
20.6	Arrival Times and Counting Processes	511
20.7	Arrivals and Demand in an Independent Random Time Period	517
20.8	Decision Schemes and Markov Times	524

21 Poisson Processes	541
21.1 The Homogeneous Poisson Process	541
21.2 Arrivals of m kinds and compound Poisson processes . . .	549
21.3 Superposition of Poisson Processes	555
21.4 Conditional Order Statistics	556
21.5 Nonhomogeneous Poisson Processes	563
21.6 Bibliographic Note	567
21a	568
21a.1 Independent Increments	568
21a.2 Axiom Systems for the Homogeneous Poisson Process . . .	569
22 Conditional Independence, Given a Random Vector	583
22.1 The Concept and Some Basic Properties	583
22.2 The Bayesian Approach to Statistics	588
22.3 Elementary Decision Models	596
22a Proofs of Properties	605
23 Markov Sequences	615
23.1 The Markov Property for Sequences	615
23.2 Some Further Patterns and Examples	622
23.3 The Chapman-Kolmogorov Equation	625
23.4 The Transition Diagram and the Transition Matrix	628
23.5 Visits to a Given State in a Homogeneous Chain	632
23.6 Classification of States in Homogeneous Chains	637
23.7 Recurrent States and Limit Probabilities	643
23.8 Partitioning Finite Homogeneous Chains	644
23.9 Evolution of Finite, Ergodic Chains	649
23.10 The Strong Markov Property for Sequences	655
23a Some Theoretical Details	661
A Some Mathematical Aids	669
B Some Basic Counting Problems	673
Index	675
