

Contents

Preface	ix
Table of Dependence	xvi
Chapter I: Sums of Independent Random Variables	1
§1.1: Independence	1
§1.2: The Weak Law of Large Numbers'	14
§1.3: Cramér's Theory of Large Deviations	22
§1.4: The Strong Law of Large Numbers	36
§1.5: Law of the Iterated Logarithm	47
Chapter II: The Central Limit Theorem	58
§2.1: The Theorems of Lindeberg and Berry–Esseen	58
§2.2: Some Extensions of The Central Limit Theorem	80
§2.3: An Application to Hermite Multipliers	93
Chapter III: Convergence of Measures, Infinite Divisibility, and Processes with Independent Increments	112
§3.1: Convergence of Probability Measures	112
§3.2: Infinitely Divisible Laws	134
§3.3: Wiener's Measure and the Invariance Principle	162
Chapter IV: A Celebration of Wiener's Measure	182
§4.1: Preliminary Results	182
§4.2: Gaussian Aspects of Wiener's Measure	188
§4.3: Markov Aspects of Wiener's Measure	218
Chapter V: Conditioning and Martingales	251
§5.1: Conditioning	251
§5.2: Discrete Parameter Martingales	268
§5.3: Some Extensions	290
Chapter VI: Some Applications of Martingale Theory	306
§6.1: The Individual Ergodic Theorem	306
§6.2: Singular Integrals & Square Functions in Analysis	318
§6.3: Burkholder's Inequality	334

Chapter VII: Continuous Martingales and Elementary Diffusion Theory	352
§7.1: Continuous Parameter Martingales	352
§7.2: Properties of Wiener Paths	372
§7.3: Perturbations of Wiener Paths	390
§7.4: Elementary Ergodic Theory of Diffusions	405
§7.5: Perturbations by Conservative Vector Fields	415
Chapter VIII: A Little Classical Potential Theory	431
§8.1: The Dirichlet Heat Kernel	431
§8.2: The Dirichlet Problem	446
§8.3: Poisson's Problem and Green's Functions	461
§8.4: Green's Potentials, Riesz Decompositions, and Capacity	474
Notation	502
Index	506
