Preface	xi
1 Probability and its laws	1
1.1 Uncertainty and probability	1
1.2 Direct measurement	4
Exercises 1(a)	8
1.3 Betting behaviour	8
1.4 Fair bets	10
1.5 The Addition Law	12
Exercises 1(b)	15
1.6 The Multiplication Law	16
1.7 Independence	18
Exercises 1(c)	19
2 Probability measurements	21
2.1 True probabilities	21
Exercises 2(a)	26
2.2 Elaboration	26
Exercises 2(b)	30
2.3 The disjunction theorem	31
Exercises 2(c)	33
2.4 The sum theorem	33
Exercises 2(d)	36
2.5 Partitions	38
2.6 Symmetry probability	40
Exercises 2(e)	44
3 Bayes' theorem	45
3.1 Extending the argument	45
Exercises 3(a)	50
3.2 Bayes' theorem	51

3.3	Learning from experience	53
	Exercises 3(b)	56
3.4	Zero probabilities in Bayes' theorem	57
3.5	Example: disputed authorship	59
4	Trials and deals	62
4.1	The product theorem	62
4.2	Mutual independence	63
	Exercises 4(a)	66
4.3	Trials	67
4.4	Factorials and combinations	69
	Exercises 4(b)	71
4.5	Binomial probabilities	72
	Exercises 4(c)	74
4.6	Multinomial probabilities	75
	Exercises 4(d)	76
4.7	Deals	77
4.8	Probabilities from information	79
	Exercises 4(e)	82
4.9	Properties of deals	82
4.10	Hypergeometric probabilities	87
	Exercises 4(f)	89
4.11	Deals from large collections	89
	Exercises 4(g)	92
5	Random variables	93
5.1	Definitions	93
5.2	Two or more random variables	95
	Exercises 5(a)	99
5.3	Elaborations with random variables	100
5.4	Example: capture-recapture	104
5.5	Example: job applications	107
	Exercises 5(b)	109
5.6	Mean and standard deviation	110
	Exercises 5(c)	115
5.7	Measuring distributions	115
5.8	Some standard distributions	120
	Exercises 5(d)	130
6	Distribution theory	132
6.1	Deriving standard distributions	132
6.2	Combining distributions	136
	Exercises 6(a)	138

6.3	Basic theory of expectations	138
6.4	Further expectation theory	141
	Exercises 6(b)	145
6.5	Covariance and correlation	146
	Exercises 6(c)	149
6.6	Conditional expectations	149
6.7	Linear regression functions	152
	Exercises 6(d)	156
7	Continuous distributions	157
7.1	Continuous random variables	157
7.2	Distribution functions	161
	Exercises 7(a)	163
7.3	Density functions	164
7.4	Transformations and expectations	168
	Exercises 7(b)	171
7.5	Standard continuous distributions	171
	Exercises 7(c)	181
7.6	Two continuous random variables	182
7.7	Example: heat transfer	190
	Exercises 7(d)	193
7.8	Random variables of mixed type	194
	Exercises 7(e)	197
7.9	Continuous distribution theory	197
	Exercises 7(f)	203
8	Frequencies	204
8.1	Exchangeable propositions	204
8.2	The finite characterization	208
	Exercises 8(a)	210
8.3	De Finetti's theorem	211
8.4	Updating	213
	Exercises 8(b)	216
8.5	Beta prior distributions	217
	Exercises 8(c)	219
8.6	Probability and frequency	220
8.7	Calibration	225
9	Statistical models	227
9.1	Parameters and models	227
9.2	Exchangeable random variables	231
	Exercises 9(a)	235

x	<i>Contents</i>	
9.3	Samples	236
9.4	Measuring mean and variance	240
	Exercises 9(b)	243
9.5	Exchangeable parametric models	243
9.6	The normal location model	246
	Exercises 9(c)	252
9.7	The Poisson model	253
9.8	Linear estimation	256
	Exercises 9(d)	261
9.9	Postscript	261
	Appendix – Solutions to exercises	263
	Index	287
