PART I FUNDAMENTALS OF PROBABILITY THEORY	1
1. Random Phenomena	3
2. Experiments	5
3. Finite Probability Spaces	7
3.1. Set Operations, 8 Exercises, 10	
4. Counting Rules	12
4.1. Poker Hands, 15 Exercises, 18	
5. Probability Spaces	19
5.1. Discrete Probability Spaces, 19	
5.2. An Experiment with Uncountably Many Outcomes, 21	
5.3. Measurable Spaces, 22	
5.3.1. The σ -Field Generated by \mathcal{F}_0 , 24	
5.4. General Probability Spaces, 25	
5.4.1. Rules of Probability, 25	
5.5. Borel Sets, 28	
5.6. Determining Probability Measures, 30	
5.7. Construction of Probability Measures, 31 Exercises, 34	
6. Conditional Probability	40
Exercises, 43	

7. Independence	46
7.1. Compound Experiments, 49	
7.2. Independence of Collections, 50	
8. Probabilities on Euclidean Spaces	52
8.1. Introduction, 52	
8.2. Discrete Distributions, 53	
8.3. Lebesgue Integration, 54	
8.3.1. Sets of Measure 0, 54	
8.3.2. Definition of the Lebesgue Integral, 57	
8.3.3. Properties of the Lebesgue Integral, 60	
8.3.4. Riemann Integration vs. Lebesgue Integration, 63	
8.3.5. Lebesgue Measurable Functions, 65	
8.3.6. Fubini's Theorem, 68	
8.4. Absolutely Continuous Distributions, 70	
8.5. Regularity Properties of Distributions on R^d , 72	
Exercises, 74	
9. Measurable Functions and Random Vectors	75
9.1. Measurable Transformations, 76	
9.2. Properties of Random Vectors, 78	
9.3. Extended Random Variables, 80	
9.4. Distributions of Measurable Mappings, 83	
9.5. Marginal and Joint Distributions, 85	
9.6. Independent Random Vectors, 87	
9.7. Product Spaces, 90	
9.8. Mixed Distributions, 93	
Exercises, 93	
10. Distribution Functions	95
10.1. One Dimensional Distribution Functions, 95	
10.2. Inverse Distribution Function, 98	
10.3. Distribution Functions on R^d , 101	
10.4. Extended Distribution Functions, 107	
Exercises, 108	

11. Expectation	109
11.1. Expectation for Simple Random Variables, 109	
11.2. Expectation for Nonnegative Random Variables, 110	
11.3. Expectation in General, 117	
11.4. Expectation of Functions of a Random Vector, 120	
11.5. Expectation of a Random Vector, 124	
11.6. Expectation as an Integral, 125	
11.7. Product Spaces, 127	
11.8. Limits and Expectation, 135	
11.9. Moments, 138	
Exercises, 140	
12. Some Inequalities	147
13. Covariance	151
13.1. Covariance in R , 151	
13.2. Covariance in R^d , 155	
13.3. Approximations for the Mean and Variance, 159	
14. Conditioning	162
14.1. Conditioning on an Event, 162	
14.2. Conditioning on a Discrete Random Vector, 163	
14.3. Conditioning on a σ -Field, 166	
14.4. Properties of Conditional Expectation, 169	
14.5. Optimal Predictors, 177	
14.6. Regular Conditional Probabilities, 178	
14.7. Kernels and Regular Conditional Probabilities, 183	
14.7.1. Conditional Distributions Given \mathbf{X} , 184	
14.7.2. Probabilities on Product Spaces, 186	
Exercises, 192	
15. Exchangeability	197
16. Infinite Sequences of Random Vectors	202
16.1. Distribution of a Random Sequence, 202	
16.2. Infinite Product Measure, 204	
16.3. Measurability, 206	
16.4. Conditioning, 207	

- 16.5. Stochastic Processes, 208
- 16.6 Kolmogorov's Existence Theorem, 210

17. Introduction to Martingales 213

- 17.1. Transformations and Gambling Systems, 214
- 17.2. Stopping, 216
- 17.3. Maximal Inequality, 220
- 17.4. Relative Submartingales, 221
Exercises, 225

PART II DISCRETE MODELS 231

18. Introduction to Parts II–IV 233

19. Success-Failure Experiments 234

Exercises, 237

20. Generating Functions 238

Exercises, 243

21. Waiting Times in Bernoulli Trials 246

- 21.1. Geometric Distributions, 246
- 21.2. Negative Binomial Distributions, 248
- 21.3. Joint Distributions, 251
- 21.4. Collector's Problem, 252
Exercises, 253

22. Conditional Distributions in Bernoulli Trials 258

23. Random Bernoulli Trials 261

- 23.1. A Bayesian Viewpoint, 263
Exercises, 265

24. Blood Tests 266

Exercises, 268

25. Random Walks	269
25.1. Unrestricted Walk, 269	
25.2. The Gambler's Ruin, 269	
25.3. First Passage Probability, 273	
25.4. Use of Martingales, 274	
25.5. First Passage Times, 277	
Exercises, 280	
26. Matching	283
26.1. Completely Random Matching, 283	
26.2. Matching Strategies, 284	
Exercises, 286	
27. Sums of Indicators	288
Exercises, 293	
28. Multinomial Trials	297
28.1. Distribution of the Occupancy Vector, 297	
28.2. Classical Occupancy, 301	
28.3. Random Multinomial Trials, 302	
Exercises, 304	
29. Poisson Approximations and Poisson Processes	308
29.1. Poisson Approximations, 308	
29.2. Poisson Processes, 310	
29.3. Examples, 312	
29.4. Construction of a Poisson Process, 313	
29.5. A Characterization of the Poisson Processes, 316	
29.6. Distance to the Particles, 317	
29.7. Other Characterizations of a Poisson Process, 318	
29.8. Compound Poisson Processes, 321	
29.9. Point Processes, 323	
Exercises, 324	

30. Stopping Multinomial Trials	328
30.1. Negative Multinomial Distributions, 328	
30.2. Stopping, 330	
Exercises, 332	
31. Sampling	334
31.1. Completely Random Sampling, 335	
31.2. Counts, 335	
31.3. Multiple Counts, 336	
31.4. Statistical Sampling, 338	
31.5. Stratified Sampling, 341	
31.6. Random Attributes, 344	
31.7. Cluster Sampling, 346	
31.7.1. Single-Stage Cluster Sampling, 347	
31.7.2. Two-Stage Cluster Sampling, 347	
31.8. Ratio Estimates, 349	
31.9. Linear Regression Estimators, 351	
Exercises, 352	
32. Markov Chains	358
32.1. Introduction, 358	
32.2. Examples, 361	
32.3. Strong Markov Property, 363	
32.4. Transient and Recurrent States, 366	
32.5. Decomposition of the State Space, 328	
32.6. Hitting Distributions, 376	
32.7. Transient and Recurrent Chains, 377	
32.7.1. Random Walks, 379	
32.8. Numbers of Visits to a State, 380	
32.9. Invariant Measures, 382	
32.10. Convergence to the Stationary Distributions, 390	
32.11. Potential Theory, 395	
32.11.1. Excessive Functions, 396	
32.11.2. Potential Principles, 399	
32.11.3. Transient and Recurrent Sets, 400	
32.12. Reversible Chains, 404	
Exercises, 407	

33. Discrete Renewal Processes	416
33.1. Definitions and Examples, 416	
33.2. Discrete Renewal Theorem, 418	
33.3. Renewal Sequences, 421	
33.4. Modified Renewal Processes, 422	
33.5. Some Fluctuation Theory, 425	
33.5.1. Equivalence Principle, 426	
33.5.2. Ladder Points, 429	
Exercises, 436	
 PART III NONDISCRETE MODELS	 441
34. Some Univariate Distributions	443
34.1. Uniform Distribution, 443	
34.2. Gamma Distributions, 444	
34.4. Normal Distributions, 446	
34.4. Exponential Models, 449	
Exercises, 450	
 35. Change of Variables	 454
Exercises, 463	
 36. Beta Distributions	 466
36.1. Definition and Basic Properties, 466	
36.2. Connection with Bernoulli Trials, 469	
Exercises, 470	
 37. Sampling Distributions	 473
37.1. Three Basic Sampling Distributions, 473	
37.2. Transformations of the Normal Distribution, 474	
Exercises, 477	
 38. Dirichlet Distributions	 481
38.1. The Dirichlet Distributions, 481	
38.2. Ordered Dirichlet Distributions, 484	
Exercises, 486	

39. Order Statistics	488
39.1. Basic Properties, 488	
39.2. Homogeneous Poisson Processes on $(0, \infty)$, 494	
39.3. Exponential Distributions, 496	
39.4. Ranks, 497	
39.5. Falling Below X_r^* , 499	
39.6. Record Values, 502	
39.7. Coverages, 510	
Exercises, 511	
 PART IV MULTIVARIATE NORMAL MODELS	 519
40. Introduction	621
41. Representations	524
42. Singular and Nonsingular Distributions	526
43. Independence	530
Exercises, 532	
44. Conditioning	534
Exercises, 541	
45. Distributions of $X ^2$	542
Exercises, 546	
46. Matrix Theory	548
 PART V LIMIT CONCEPTS	 553
47. Convergence with Probability One	555
47.1. Basic Properties, 555	
47.2. Some Strong Convergence Results, 564	
47.3. Applications to Renewal Theory, 570	
47.4. Some Extensions of the Borel-Cantelli Lemma, 573	
47.5. Upcrossing and Submartingale Convergence, 576	
47.6. Reverse Submartingales, 581	
Exercises, 583	

48. Applications to Statistics	591
48.1. Empirical Distribution, 591	
48.2. Sample Quantities, 593	
Exercises, 594	
49. Convergence in Probability	595
49.1. Properties of Convergence in Probability, 595	
49.2. Weak Laws of Large Numbers, 599	
49.3. Applications to Exchangeable Indicators, 602	
49.4. Fair Games and Weak Laws of Large Numbers, 604	
Exercises, 608	
50. Convergence of Distributions	613
50.1. Definitions, 613	
50.2. Properties of Convergence in Distribution, 614	
50.3. Determining Convergence in Distribution, 622	
50.4. Helly's Theorem, 625	
50.5. Convergence of Types, 627	
50.6. Triangular Arrays of Indicators, 628	
50.7. Nonnegative Infinitely Divisible Distributions, 631	
50.7.1. Limits of Triangular Arrays, 631	
50.7.2. Infinitely Divisible Distributions, 635	
50.7.3. Stable Distributions, 639	
Exercises, 642	
51. Characteristic Functions	648
51.1. Basic Properties, 648	
51.2. Expansions of Characteristic Functions, 658	
51.3. Characterizations of Characteristic Functions, 663	
51.4. Inversion Formulas, 668	
51.5. Weak Law of Large Numbers, 671	
51.6. An Application to Recurrent Events, 672	
Exercises, 675	
52. Central Limit Theorem	681
52.1. The Classical Central Limit Theorem, 681	
52.2. Some Applications of the CLT, 683	
52.3. Lindeberg Theorem, 692	

52.4.	Random Sums, 703	
52.5.	Feller's Theorem, 704	
52.6.	Local Limit Theorems, 706	
	Exercises, 711	
53.	Limit Laws for Quantities	716
	Exercises, 718	
54.	Limit Laws for Extreme Order Statistics	720
	Exercises, 726	
55.	The L_p Spaces	728
55.1.	Uniform Integrability, 728	
55.2.	Convergence in L_p , 731	
55.3.	Hölder and Minkowski Inequalities, 734	
55.4.	L_p as a Normed Space, 736	
55.5.	Geometry of L_2 , 737	
55.6.	Existence of Conditional Expectation, 741	
55.7.	Uniform Integrability and Martingales, 742	
	Exercises, 746	
56.	Moment Generating Functions	750
56.1.	Properties of a Moment Generating Function, 750	
56.2.	Applications to Random Walks, 755	
	Exercises, 757	
57.	Zero–One Laws	758
57.1.	Tail and Symmetric Events, 758	
57.2.	Kolmogorov's Zero–One Law, 759	
57.3.	Exchangeable Sequences, 760	
57.4.	De Finetti's Theorem, 764	
	Exercises, 766	
58.	Random Series of Random Variables	768
58.1.	Independent Random Variables, 768	
58.2.	Sums of Dependent Random Variables, 774	
	Exercises, 775	

59. Stationary Sequences and the Ergodic Theorem	779
59.1. Introduction, 779	
59.2. Measure Preserving Transformations, 779	
59.3. Invariant Random Variables, 782	
59.4. The Ergodic Theorem, 785	
59.5. Range of a Random Walk, 789	
59.6. Recurrence Properties, 791	
59.7. Subadditive Ergodic Theorem, 792	
Exercises, 800	
60. Large Deviations Principle	803
Exercises, 810	
61. Central Limit Theorems for Dependent Random Variables	811
61.1. The CLT for Sums Involving Random Permutations, 811	
61.2. Applications to Sampling Theory, 817	
61.3. A Martingale CLT, 820	
61.4. Central Limit Theorems for Markov Chains, 823	
Exercises, 825	
62. Absolutely Continuous and Singular Probability Measures	826
62.1. Definitions, 826	
62.2. Radon-Nikodym Theorem, 827	
62.3. Lebesgue Decomposition, 829	
62.4. Equivalence for Distributions of Sequences of Independent Random Vectors, 832	
Exercises, 834	
APPENDICES	837
1. Facts on Sequences	839
2. λ and π Systems	843
3. Outer Measures	845
4. Construction of Measures	848
5. Monotone Functions on R	851

6. Dyadic Expansions	855
7. Mappings of $[0, 1]$ onto R^d	857
8. The Cantor Set and the Cantor Function	859
9. Translates of Integrable Functions	861
10. Nonmeasurable Sets	863
11. Convex Functions on R	865
12. Some Integrals	868
13. Some Abelian Formulas	870
14. Some Functional Equations	876
15. Kronecker's Lemma	878
16. A Result from Number Theory	880
Table of Tail Probability Under Standard Normal Distribution	881
Bibliography	882
Index	883
