

# Contents

<b>Preface</b>	<b>vii</b>
<b>1 Cars, Goats, and Sample Spaces</b>	<b>1</b>
1.1 Getting your goat . . . . .	1
1.2 Nutshell history and philosophy lesson . . . . .	2
1.3 Let those dice roll. Sample spaces . . . . .	3
1.4 Discrete sample spaces. Probability distributions and spaces . . . . .	5
1.5 The car-goat problem solved . . . . .	8
1.6 Exercises for Chapter 1 . . . . .	11
<b>2 How to Count: Birthdays and Lotteries</b>	<b>13</b>
2.1 Counting your birthdays . . . . .	13
2.2 Following your dreams in Lottoland . . . . .	18
2.3 Exercises for Chapter 2 . . . . .	20
<b>3 Conditional Probability: From Kings to Prisoners</b>	<b>21</b>
3.1 Some probability rules. Conditional Probability . . . . .	21
3.2 Does the king have a sister? . . . . .	23
3.3 The prisoner's dilemma . . . . .	24
3.4 All about urns . . . . .	27
3.5 Exercises for Chapter 3 . . . . .	29

<b>4</b>	<b>The Formula of Thomas Bayes and Other Matters</b>	<b>31</b>
4.1	On blood tests and Bayes's formula . . . . .	31
4.2	An urn problem . . . . .	34
4.3	Laplace's law of succession . . . . .	36
4.4	Subjective probability . . . . .	37
4.5	Questions of paternity . . . . .	39
4.6	Exercises for Chapter 4 . . . . .	40
<b>5</b>	<b>The Idea of Independence, with Applications</b>	<b>41</b>
5.1	Independence of events . . . . .	41
5.2	Waiting for the first head to show . . . . .	44
5.3	On the likelihood of alien life . . . . .	46
5.4	The monkey at the typewriter . . . . .	48
5.5	Rare events do occur . . . . .	50
5.6	Rare versus extraordinary events . . . . .	51
5.7	Exercises for Chapter 5 . . . . .	52
<b>6</b>	<b>A Little Bit About Games</b>	<b>55</b>
6.1	The problem of points . . . . .	55
6.2	Craps . . . . .	56
6.3	Roulette . . . . .	57
6.4	What are the odds? . . . . .	58
6.5	Exercises for Chapter 6 . . . . .	58
<b>7</b>	<b>Random Variables, Expectations, and More About Games</b>	<b>61</b>
7.1	Random variables . . . . .	61
7.2	The binomial random variable . . . . .	63
7.3	The game of chuck-a-luck and de Méré's problem of dice . . . . .	64
7.4	The expectation of a random variable . . . . .	65
7.5	Fair and unfair games . . . . .	68
7.6	Gambling systems . . . . .	71
7.7	Administering a blood test . . . . .	73
7.8	Exercises for Chapter 7 . . . . .	75
<b>8</b>	<b>Baseball Cards, The Law of Large Numbers, and Bad News for Gamblers</b>	<b>77</b>
8.1	The coupon collector's problem . . . . .	77
8.2	Indicator variables and the expectation of a binomial variable . . . . .	79
8.3	Independent random variables . . . . .	80
8.4	The coupon collector's problem solved . . . . .	80
8.5	The Law of Large Numbers . . . . .	82
8.6	The Law of Large Numbers and gambling . . . . .	85
8.7	A gambler's fallacy . . . . .	87

8.8	The variance of a random variable . . . . .	87
8.8.1	Appendix . . . . .	89
8.8.2	The variance of the sum of independent random variables . . . . .	90
8.8.3	The variance of $S_n/n$ . . . . .	91
8.9	Exercises for Chapter 8 . . . . .	92
<b>9</b>	<b>From Traffic to Chocolate Chip Cookies with the Poisson Distribution</b>	<b>95</b>
9.1	A traffic problem . . . . .	95
9.2	The Poisson as an approximation to the binomial . . . . .	99
9.3	Applications of the Poisson distribution . . . . .	100
9.4	The Poisson process . . . . .	101
9.5	Exercises for Chapter 9 . . . . .	102
<b>10</b>	<b>The Desperate Case of the Gambler's Ruin</b>	<b>103</b>
10.1	Let's go for a random walk . . . . .	103
10.2	The gambler's ruin problem . . . . .	104
10.3	Bold play or timid play? . . . . .	108
10.4	Exercises for Chapter 10 . . . . .	109
<b>11</b>	<b>Breaking Sticks, Tossing Needles, and More: Probability on Continuous Sample Spaces</b>	<b>111</b>
11.1	Choosing a number at random from an interval . . . . .	111
11.2	Bus stop . . . . .	114
11.3	The expectation of a continuous random variable . . . . .	114
11.4	Normal numbers . . . . .	116
11.5	Bertrand's paradox . . . . .	120
11.6	When do we have a triangle? . . . . .	121
11.7	Buffon's needle problem . . . . .	122
11.8	Exercises for Chapter 11 . . . . .	124
<b>12</b>	<b>Normal Distributions, and Order from Diversity via the Central Limit Theorem</b>	<b>127</b>
12.1	Making sense of some data . . . . .	127
12.2	The normal distributions . . . . .	130
12.3	Some pleasant properties of normal distributions . . . . .	132
12.4	The Central Limit Theorem . . . . .	134
12.5	How many heads did you get? . . . . .	136
12.6	Why so many quantities may be approximately normal . . . . .	137
12.7	Exercises for Chapter 12 . . . . .	139
<b>13</b>	<b>Random Numbers: What They Are and How to Use Them</b>	<b>141</b>
13.1	What are random numbers? . . . . .	141

13.2	When are digits random? Statistical randomness . . . . .	145
13.3	Pseudo-random numbers . . . . .	147
13.4	Random sequences arising from decimal expansions . . . . .	148
13.5	The use of random numbers . . . . .	149
13.6	The 1970 draft lottery . . . . .	153
13.7	Exercises for Chapter 13 . . . . .	155
<b>14</b>	<b>Computers and Probability</b>	<b>157</b>
14.1	A little bit about computers . . . . .	157
14.2	Frequency of zeros in a random sequence . . . . .	159
14.3	Simulation of tossing a coin . . . . .	159
14.4	Simulation of rolling a pair of dice . . . . .	160
14.5	Simulation of the Buffon needle tosses . . . . .	161
14.6	Monte Carlo estimate of $\pi$ using bombardment of a circle . . . . .	161
14.7	Monte Carlo estimate for the broken stick problem . . . . .	162
14.8	Monte Carlo estimate of a binomial probability . . . . .	163
14.9	Monte Carlo estimate of the probability of winning at craps . . . . .	164
14.10	Monte Carlo estimate of the gambler's ruin probability . . . . .	165
14.11	Constructing approximately normal random variables . . . . .	166
14.12	Exercises for Chapter 14 . . . . .	167
<b>15</b>	<b>Statistics: Applying Probability to Make Decisions</b>	<b>169</b>
15.1	What statistics does . . . . .	169
15.2	Lying with statistics? . . . . .	170
15.3	Deciding between two probabilities . . . . .	171
15.4	More complicated decisions . . . . .	173
15.5	How many fish in the lake, and other problems of estimation . . . . .	176
15.6	Polls and confidence intervals . . . . .	180
15.7	Random sampling . . . . .	182
15.8	Some concluding remarks . . . . .	184
15.9	Exercises for Chapter 15 . . . . .	185
<b>16</b>	<b>Roaming the Number Line with a Markov Chain: Dependence</b>	<b>187</b>
16.1	A picnic in Alphaville? . . . . .	187
16.2	One-dimensional random walks . . . . .	190
16.3	The probability of ever returning "home" . . . . .	192
16.4	About the gambler recouping her losses . . . . .	195
16.5	The dying out of family names . . . . .	197
16.6	The number of parties waiting for a taxi . . . . .	198
16.7	Stationary distributions . . . . .	199
16.8	Applications to genetics . . . . .	200
16.9	Exercises for Chapter 16 . . . . .	201

<b>17 The Brownian Motion, and Other Processes in Continuous Time</b>	<b>203</b>
17.1 Processes in continuous time . . . . .	203
17.2 A few computations for the Poisson process . . . . .	206
17.3 The Brownian motion process . . . . .	206
17.4 A few computations for Brownian motion . . . . .	208
17.5 Brownian motion as a limit of random walks . . . . .	210
17.6 Exercises for Chapter 17 . . . . .	213
<b>Answers to Exercises</b>	<b>215</b>
<b>Bibliography</b>	<b>235</b>
<b>Index</b>	<b>239</b>
