

Contents

Preface	vii
Use of This Text	xiii
Definition of Symbols	xviii

Chapter 1. Measures

1. Basic Properties of Measures	1
2. Construction and Extension of Measures	12
3. Lebesgue–Stieltjes Measures	18

Chapter 2. Measurable Functions and Convergence

1. Mappings and σ -Fields	21
2. Measurable Functions	24
3. Convergence	29
4. Probability, RVs, and Convergence in Law	33
5. Discussion of Sub σ -Fields	35

Chapter 3. Integration

1. The Lebesgue Integral	37
2. Fundamental Properties of Integrals	40
3. Evaluating and Differentiating Integrals	44
4. Inequalities	46
5. Modes of Convergence	51

Chapter 4. Derivatives via Signed Measures

1. Decomposition of Signed Measures	61
2. The Radon–Nikodym Theorem	66
3. Lebesgue’s Theorem	70
4. The Fundamental Theorem of Calculus	74

Chapter 5. Measures and Processes on Products

1. Finite-Dimensional Product Spaces	79
2. Random Vectors on (Ω, \mathcal{A}, P)	84
3. Countably Infinite Product Probability Spaces	86
4. Random Elements and Processes on (Ω, \mathcal{A}, P)	90

Chapter 6. General Topology and Hilbert Space

1. General Topology	95
2. Metric Spaces	101
3. Hilbert Space	104

Chapter 7. Distribution and Quantile Functions

1. Character of Distribution Functions	107
2. Properties of Distribution Functions	110
3. The Quantile Transformation	111
4. Integration by Parts Applied to Moments	115
5. Important Statistical Quantities	119
6. Infinite Variance	123
7. Slowly Varying Partial Variance	128
8. Specific Tail Relationships	135
9. Regularly Varying Functions	138
10. Some Winsorized Variance Comparisons	142
11. Inequalities for Winsorized Quantile Functions	149

Chapter 8. Independence and Conditional Distributions

1. Independence	153
2. The Tail σ -Field	157
3. Uncorrelated Random Variables	159
4. Basic Properties of Conditional Expectation	160
5. Regular Conditional Probability	170
6. Conditional Expectations as Projections	176

Chapter 9. Special Distributions

1. Elementary Probability	181
2. Distribution Theory for Statistics	189
3. Linear Algebra Applications	193
4. The Multivariate Normal Distribution	201

Chapter 10. WLLN, SLLN, LIL, and Series

0. Introduction	205
1. Borel-Cantelli and Kronecker Lemmas	206
2. Truncation, WLLN, and Review of Inequalities	208
3. Maximal Inequalities and Symmetrization	212
4. The Classical Laws of Large Numbers, LLNs	217
5. Applications of the Laws of Large Numbers	225
6. General Moment Estimation	228
7. Law of the Iterated Logarithm	237
8. Strong Markov Property for Sums of IID RVs	241
9. Convergence of Series of Independent RVs	243
10. Martingales	248
11. Maximal Inequalities, Some with \nearrow Boundaries	249
12. A Uniform SLLN	254

Chapter 11. Convergence in Distribution

1. Stein's Method for CLTs 257
2. Winsorization and Truncation 266
3. Identically Distributed RVs 271
4. Bootstrapping 276
5. Bootstrapping with Slowly Increasing Trimming 278
6. Examples of Limiting Distributions 281
7. Classical Convergence in Distribution 290
8. Limit Determining Classes of Functions 294

Chapter 12. Brownian Motion and Empirical Processes

1. Special Spaces 297
2. Existence of Processes on (C, \mathcal{C}) and (D, \mathcal{D}) 300
3. Brownian Motion and Brownian Bridge 304
4. Stopping Times 307
5. Strong Markov Property 310
6. Embedding a RV in Brownian Motion 313
7. Barrier Crossing Probabilities 316
8. Embedding the Partial Sum Process 320
9. Other Properties of Brownian Motion 325
10. Various Empirical Processes 327
11. Inequalities for the Various Empirical Processes 335
12. Applications 340

Chapter 13. Characteristic Functions

1. Basic Results, with Derivation of Common Chfs 343
2. Uniqueness and Inversion 348
3. The Continuity Theorem 352
4. Elementary Complex and Fourier Analysis 354
5. Esseen's Lemma 360
6. Distributions on Grids 363
7. Conditions for ϕ to Be a Characteristic Function 365

Chapter 14. CLTs via Characteristic Functions

0. Introduction 367
1. Basic Limit Theorems 368
2. Variations on the Classical CLT 373
3. Local Limit Theorems 382
4. Gamma Approximation 385
5. Edgeworth Expansions 393
6. Approximating the Distribution of $h(\bar{X}_n)$ 399

Chapter 15. Infinitely Divisible and Stable Distributions

1. Infinitely Divisible Distributions 401
2. Stable Distributions 409
3. Characterizing Stable Laws 412
4. The Domain of Attraction of a Stable Law 414

Chapter 16. Asymptotics via Empirical Processes

0. Introduction 417
1. Trimmed and Winsorized Means 418
2. Linear Rank Statistics and Finite Sampling 428
3. The Bootstrap 434
4. L-Statistics 439

Chapter 17. Asymptotics via Stein's Approach

1. U-Statistics 451
2. Hoeffding's Combinatorial CLT 460

Chapter 18. Martingales

1. Basic Technicalities for Martingales 469
2. Simple Optional Sampling Theorem 474
3. The Submartingale Convergence Theorem 475
4. Applications of the S-mg Convergence Theorem 483
5. Decomposition of a Submartingale Sequence 489
6. Optional Sampling 494
7. Applications of Optional Sampling 501
8. Introduction to Counting Process Martingales 503
9. Doob–Meyer Submartingale Decomposition 513
10. Predictable Processes and $\int_0^\cdot H dM$ Martingales 518
11. The Basic Censored Data Martingale 524
12. CLTs for Dependent RVs 531

Chapter 19. Convergence in Law on Metric Spaces

1. Convergence in Distribution on Metric Spaces 533
2. Metrics for Convergence in Distribution 542

Appendix A. Distribution Summaries

1. The Gamma and Digamma Functions 548
2. Maximum Likelihood Estimators and Moments 553
3. Examples of Statistical Models 557
4. Asymptotics of Maximum Likelihood Estimation 565
