

CONTENTS

Preface	ix
Introduction	1
1 Discrete Space of Elementary Events	4
1.1 Probability Space	4
1.2 Classical Scheme	6
1.3 Bernoulli Scheme	9
1.4 Probability of the Union of Events. Examples	12
2 Arbitrary Space of Elementary Events	14
2.1 Axioms of Probability Theory. Probability Space	14
2.2 Properties of Probability	20
2.3 Conditional Probability. Independence of Events and Trials	21
2.4 Total Probability Formula. Bayes Formula	24
3 Random Variables and Distribution Functions	28
3.1 Definitions and Examples	28
3.2 Properties of Distribution Functions. Examples	30
3.3 Multidimensional Random Variables	38
3.4 Independence of Random Variables and Classes of Events	42
3.5 On Infinite Sequences of Random Variables	49
3.6 Integrals	49
4 Numerical Characteristics of Random Variables	56
4.1 Expectation	56
4.2 Conditional Distribution Functions and Conditional Expectations	60
4.3 Expectations of Functions of Independent Random Variables	64
4.4 Expectations of Random Variables Independent of the Future	65
4.5 Variance	69
4.6 Correlation Coefficient and Other Numerical Characteristics	71
4.7 Inequalities	73
4.8 Extension of the Notion of Conditional Expectation	76
4.9 Conditional Distributions	83
5 Sequences of Independent Trials with Two Outcomes	91
5.1 Laws of Large Numbers	91
5.2 The Local Limit Theorem	93
5.3 The Laplace–de Moivre Theorem and Its Extensions	97
5.4 The Poisson Theorem and Its Refinements	99
5.5 Inequalities for Large Deviations Probabilities in the Bernoulli Scheme	106

6 On Convergence of Random Variables and Distributions	108
6.1 Convergence of Random Variables	108
6.2 Convergence of Distributions	115
6.3 Conditions for Weak Convergence	120
7 Characteristic Functions	125
7.1 Definition and Properties of Characteristic Functions	125
7.2 Inversion Formula	130
7.3 Continuity (Convergence) Theorem	132
7.4 Another Approach to Proving Theorems on Convergence to a Known Distribution	134
7.5 Applying Characteristic Functions in the Poisson Theorem	136
7.6 Characteristic Functions of Multivariate Distributions. Multivariate Normal Distribution	138
7.7 Other Applications of Characteristic Functions. Properties of Gamma Distributions	141
7.8 Generating Functions. Application to Branching Processes. Extinction	146
8 Sequences of Independent Random Variables. Limit Theorems	151
8.1 The Law of Large Numbers	151
8.2 The Central Limit Theorem for Identically Distributed Random Variables	152
8.3 The Law of Large Numbers for Arbitrary Independent Random Variables	153
8.4 The Central Limit Theorem for Sums of Arbitrary Independent Random Variables	159
8.5 Another Approach to Proving Limit Theorems. Approximation Rates	166
8.6 The Local Limit Theorem	169
8.7 The Law of Large Numbers and Central Limit Theorem in the Multivariate Case	173
8.8 Large Deviations Probabilities	174
8.9 Convergence to Other Stable Laws	183
9 Elements of Renewal Theory	191
9.1 Renewal Process. Renewal Functions	191
9.2 The Key Renewal Theorem in the Lattice Case	195
9.3 Excess and Defect of a Random Walk. Their Limiting Distribution in the Lattice Case	200
9.4 Renewal Theorem and the Limiting Behaviour of Excess and Defect in the Non-Lattice Case	203
9.5 The Law of Large Numbers and Central Limit Theorem for Renewal Processes	206
10 Sequences of Independent Random Variables. Properties of the Trajectory $(0, S_1, S_2, \dots)$	209
10.1 Zero-One Laws. Upper and Lower Functions	209
10.2 Convergence of Series of Independent Random Variables	213
10.3 The Strong Law of Large Numbers	215
10.4 The Strong Law of Large Numbers for Arbitrary Independent Variables	219
11 Factorization Identities	221
11.1 Factorization Identities and Their First Consequences	221
11.2 Factorization Identities. Properties of the Trajectory $(0, S_1, S_2, \dots)$	226
11.3 The Distribution of $S = \max(0, \zeta) = \max_{k \geq 0} S_k$	229

11.4	Queuing Systems	231
11.5	Factorization Identities for Distributions Related to the Exponential Function	232
11.6	Symmetric Continuously Distributed Random Variables	234
11.7	Pollaczek–Spitzer Identity	235
11.8	Explicit Formulae for Skip-Free Discrete Walks	237
12	Sequences of Dependent Trials. Markov Chains	242
12.1	Discrete Markov Chains. Definitions and Examples. Classification of States	242
12.2	Necessary and Sufficient Conditions for Recurrence of States. Types of States in Irreducible Chain. Structure of a Periodic Chain	247
12.3	Theorems about Random Walks on Lattice	250
12.4	Ergodic Theorems	255
12.5	Behaviour of Transition Probabilities for Reducible Chains	262
12.6	Markov Chains with Arbitrary State Spaces. Ergodicity of Chains with a Positive Atom	264
12.7	Ergodicity of Harris Markov Chains	271
13	Information and Entropy	284
13.1	Definitions and Properties of Information and Entropy	284
13.2	The Entropy of a Finite Markov Chain. The Asymptotic Behaviour of the Information Contained in a Long Message	289
14	Martingales	293
14.1	Definitions, Simplest Properties and Examples	293
14.2	Martingale Property and Random Change of Time. Wald Identity	297
14.3	Inequalities	310
14.4	Convergence Theorems	315
14.5	Boundedness of the Moments of Stochastic Sequences	319
15	Stationary Sequences	325
15.1	Basic Notions	325
15.2	Ergodicity, Mixing and Weak Dependence	329
15.3	The Ergodic Theorem	332
16	Stochastically Recursive Sequences	336
16.1	Basic Notions	336
16.2	Ergodicity and Renovating Events. Boundedness Conditions	337
16.3	Ergodicity Conditions Related to Monotonicity	343
16.4	Ergodicity Conditions for Contracting in the Mean Lipschitz Transformations	345
17	Continuous Time Random Processes	352
17.1	General Definitions	352
17.2	Criteria of Regularity of Processes	356
18	Processes with Independent Increments	362
18.1	General Properties	362
18.2	Wiener Processes. Properties of Trajectories	364
18.3	The Laws of Iterated Logarithm	366
18.4	The Poisson Process	370
18.5	Distributional Characterization of the Class of Processes with Independent Increments	373

19 Functional Limit Theorems	377
19.1 Convergence to the Wiener Process	377
19.2 The Law of the Iterated Logarithm	385
19.3 Convergence to the Poisson Process	388
20 Markov Processes	392
20.1 Definitions and General Properties	392
20.2 Markov Processes with Countable State Spaces. Examples	395
20.3 Branching Processes	403
20.4 Semi-Markov and Regenerative Processes	405
20.5 Diffusion Processes	412
21 Processes with Finite Second Moments. Gaussian Processes	419
21.1 Processes with Finite Second Moments	419
21.2 Gaussian Processes	422
21.3 Prediction Problem	423
Appendices	426
A1 Extension of a Probability Measure	426
A2 Kolmogorov Theorem on Consistent Distributions	431
A3 Integration	433
A4 Theorems of Helly and Arcela–Ascoli	454
A5 Proof of the Berry–Esseen Theorem	456
A6 Renewal Theorems	460
Bibliography	467
Index	469
