## CHAPTER VII CARTAN SUBALGEBRAS AND REGULAR ELEMENTS

---

§ 1. Primary decomposition of linear representations .....	1
1. Decomposition of a family of endomorphisms .....	1
2. The case of a linear family of endomorphisms .....	6
3. Decomposition of representations of a nilpotent Lie algebra .....	8
4. Decomposition of a Lie algebra relative to an automorphism .....	11
5. Invariants of a semi-simple Lie algebra relative to a semi-simple action .....	11
§ 2. Cartan subalgebras and regular elements of a Lie algebra .....	12
1. Cartan subalgebras .....	13
2. Regular elements of a Lie algebra .....	16
3. Cartan subalgebras and regular elements .....	18
4. Cartan subalgebras of semi-simple Lie algebras .....	19
§ 3. Conjugacy theorems .....	20
1. Elementary automorphisms .....	20
2. Conjugacy of Cartan subalgebras .....	22
3. Applications of conjugacy .....	24
4. Conjugacy of Cartan subalgebras of solvable Lie algebras ..	25
5. Lie group case .....	26
§ 4. Regular elements of a Lie group .....	27
1. Regular elements for a linear representation .....	27
2. Regular elements of a Lie group .....	29
3. Relations with regular elements of the Lie algebra .....	31
4. Application to elementary automorphisms .....	34

<b>§ 5. Decomposable linear Lie algebras</b> .....	34
1. Decomposable linear Lie algebras .....	34
2. Decomposable envelope .....	37
3. Decompositions of decomposable algebras .....	37
4. Linear Lie algebras of nilpotent endomorphisms .....	39
5. Characterizations of decomposable Lie algebras .....	43
<b>Appendix I - Polynomial maps and Zariski topology</b> .....	45
1. Zariski topology .....	45
2. Dominant polynomial maps .....	46
<b>Appendix II - A connectedness property</b> .....	48
Exercises for § 1 .....	51
Exercises for § 2 .....	55
Exercises for § 3 .....	57
Exercises for § 4 .....	63
Exercises for § 5 .....	63
Exercises for Appendix I .....	66
Exercises for Appendix II .....	67

---

## CHAPTER VIII SPLIT SEMI-SIMPLE LIE ALGEBRAS

---

<b>§ 1. The Lie algebra <math>\mathfrak{sl}(2, k)</math> and its representations</b> .....	69
1. Canonical basis of $\mathfrak{sl}(2, k)$ .....	69
2. Primitive elements of $\mathfrak{sl}(2, k)$ -modules .....	70
3. The simple modules $V(m)$ .....	72
4. Linear representations of the group $\mathbf{SL}(2, k)$ .....	74
5. Some elements of $\mathbf{SL}(2, k)$ .....	76
<b>§ 2. Root system of a split semi-simple Lie algebra</b> .....	77
1. Split semi-simple Lie algebras .....	77
2. Roots of a split semi-simple Lie algebra .....	78
3. Invariant bilinear forms .....	83
4. The coefficients $N_{\alpha\beta}$ .....	83
<b>§ 3. Subalgebras of split semi-simple Lie algebras</b> .....	86
1. Subalgebras stable under $\text{ad } \mathfrak{h}$ .....	86
2. Ideals .....	89
3. Borel subalgebras .....	90
4. Parabolic subalgebras .....	92
5. Non-split case .....	94

§ 4. Split semi-simple Lie algebra defined by a reduced root system .....	95
1. Framed semi-simple Lie algebras .....	95
2. A preliminary construction .....	96
3. Existence theorem .....	100
4. Uniqueness theorem .....	104
§ 5. Automorphisms of a semi-simple Lie algebra .....	106
1. Automorphisms of a framed semi-simple Lie algebra .....	106
2. Automorphisms of a split semi-simple Lie algebra .....	107
3. Automorphisms of a splittable semi-simple Lie algebra .....	111
4. Zariski topology on $\text{Aut}(\mathfrak{g})$ .....	113
5. Lie group case .....	115
§ 6. Modules over a split semi-simple Lie algebra .....	115
1. Weights and primitive elements .....	116
2. Simple modules with a highest weight .....	118
3. Existence and uniqueness theorem .....	119
4. Commutant of $\mathfrak{h}$ in the enveloping algebra of $\mathfrak{g}$ .....	122
§ 7. Finite dimensional modules over a split semi-simple Lie algebra .....	124
1. Weights of a finite dimensional simple $\mathfrak{g}$ -module .....	124
2. Highest weight of a finite dimensional simple $\mathfrak{g}$ -module .....	126
3. Minuscule weights .....	130
4. Tensor products of $\mathfrak{g}$ -modules .....	132
5. Dual of a $\mathfrak{g}$ -module .....	134
6. Representation ring .....	136
7. Characters of $\mathfrak{g}$ -modules .....	139
§ 8. Symmetric invariants .....	141
1. Exponential of a linear form .....	141
2. Injection of $k[\mathbb{P}]$ into $\mathbf{S}(\mathfrak{h})^*$ .....	142
3. Invariant polynomial functions .....	143
4. Properties of $\text{Aut}_0$ .....	148
5. Centre of the enveloping algebra .....	148
§ 9. The formula of Hermann Weyl .....	152
1. Characters of finite dimensional $\mathfrak{g}$ -modules .....	152
2. Dimensions of simple $\mathfrak{g}$ -modules .....	154
3. Multiplicities of weights of simple $\mathfrak{g}$ -modules .....	156
4. Decomposition of tensor products of simple $\mathfrak{g}$ -modules .....	157

§ 10. Maximal subalgebras of semi-simple Lie algebras	159
§ 11. Classes of nilpotent elements and $\mathfrak{sl}_2$ -triplets	163
1. Definition of $\mathfrak{sl}_2$ -triplets	163
2. $\mathfrak{sl}_2$ -triplets in semi-simple Lie algebras	165
3. Simple elements	167
4. Principal elements	170
§ 12. Chevalley orders	173
1. Lattices and orders	173
2. Divided powers in a bigebra	173
3. Integral variant of the Poincaré-Birkhoff-Witt theorem	174
4. Example: polynomials with integer values	176
5. Some formulas	178
6. Biorders in the enveloping algebra of a split reductive Lie algebra	180
7. Chevalley orders	185
8. Admissible lattices	187
§ 13. Classical splittable simple Lie algebras	189
1. Algebras of type $A_l$ ( $l \geq 1$ )	190
2. Algebras of type $B_l$ ( $l \geq 1$ )	195
3. Algebras of type $C_l$ ( $l \geq 1$ )	204
4. Algebras of type $D_l$ ( $l \geq 2$ )	211
<b>Table 1</b>	217
<b>Table 2</b>	218
Exercises for § 1	219
Exercises for § 2	226
Exercises for § 3	229
Exercises for § 4	231
Exercises for § 5	233
Exercises for § 6	238
Exercises for § 7	238
Exercises for § 8	250
Exercises for § 9	253
Exercises for § 10	260
Exercises for § 11	261
Exercises for § 13	266
<b>Summary of some important properties of semi-simple Lie algebras</b>	273

---

**CHAPTER IX COMPACT REAL LIE GROUPS**

---

<b>§ 1. Compact Lie algebras</b> .....	281
1. Invariant hermitian forms .....	281
2. Connected commutative real Lie groups .....	282
3. Compact Lie algebras .....	283
4. Groups whose Lie algebra is compact .....	284
<b>§ 2. Maximal tori of compact Lie groups</b> .....	287
1. Cartan subalgebras of compact algebras .....	287
2. Maximal tori .....	288
3. Maximal tori of subgroups and quotient groups .....	291
4. Subgroups of maximal rank .....	292
5. Weyl group .....	293
6. Maximal tori and covering of homomorphisms .....	295
<b>§ 3. Compact forms of complex semi-simple Lie algebras</b> ....	296
1. Real forms .....	296
2. Real forms associated to a Chevalley system .....	297
3. Conjugacy of compact forms .....	299
4. Example I: compact algebras of type $A_n$ .....	300
5. Example II: compact algebras of type $B_n$ and $D_n$ .....	301
6. Compact groups of rank 1 .....	302
<b>§ 4. Root system associated to a compact group</b> .....	304
1. The group $X(H)$ .....	304
2. Nodal group of a torus .....	305
3. Weights of a linear representation .....	307
4. Roots .....	309
5. Nodal vectors and inverse roots .....	311
6. Fundamental group .....	314
7. Subgroups of maximum rank .....	316
8. Root diagrams .....	317
9. Compact Lie groups and root systems .....	319
10. Automorphisms of a connected compact Lie group .....	322
<b>§ 5. Conjugacy classes</b> .....	324
1. Regular elements .....	324
2. Chambers and alcoves .....	325
3. Automorphisms and regular elements .....	327
4. The maps $(G/T) \times T \rightarrow G$ and $(G/T) \times A \rightarrow G_r$ .....	331

<b>§ 6. Integration on compact Lie groups</b> .....	333
1. Product of alternating multilinear forms .....	333
2. Integration formula of H. Weyl .....	334
3. Integration on Lie algebras .....	339
4. Integration of sections of a vector bundle .....	341
5. Invariant differential forms .....	344
<b>§ 7. Irreducible representations of connected compact Lie groups</b> .....	347
1. Dominant characters .....	347
2. Highest weight of an irreducible representation .....	348
3. The ring $R(G)$ .....	351
4. Character formula .....	353
5. Degree of irreducible representations .....	356
6. Casimir elements .....	358
<b>§ 8. Fourier transform</b> .....	359
1. Fourier transforms of integrable functions .....	360
2. Fourier transforms of infinitely-differentiable functions .....	362
3. Fourier transforms of central functions .....	366
4. Central functions on $G$ and functions on $T$ .....	368
<b>§ 9. Compact Lie groups operating on manifolds</b> .....	369
1. Embedding of a manifold in the neighbourhood of a compact set .....	369
2. Equivariant embedding theorem .....	373
3. Tubes and transversals .....	375
4. Orbit types .....	377
<b>Appendix I - Structure of compact groups</b> .....	381
1. Embedding a compact group in a product of Lie groups .....	381
2. Projective limits of Lie groups .....	382
3. Structure of connected compact groups .....	384
<b>Appendix II - Representations of real, complex or quaternionic type</b> .....	385
1. Representations of real algebras .....	385
2. Representations of compact groups .....	387
Exercises for § 1 .....	389
Exercises for § 2 .....	391
Exercises for § 3 .....	394
Exercises for § 4 .....	396
Exercises for § 5 .....	405

Exercises for § 6 .....	409
Exercises for § 7 .....	414
Exercises for § 8 .....	417
Exercises for § 9 .....	419
Exercises for Appendix I .....	424
<b>INDEX OF NOTATION</b> .....	<b>427</b>
<b>INDEX OF TERMINOLOGY</b> .....	<b>431</b>
