## **CONTENTS**

Pr	reface		page ix	
1	The	eory of sets		
	1.1	Sets	1	
	1.2		3	
		Cardinal numbers	5	
		Operations on subsets	9	
		Classes of subsets	14	
	1.6	Axiom of choice	19	
2	Poi	nt set topology		
	2.1	Metric space	23	
	2.2	Completeness and compactness	29	
	2.3	Functions	35	
	2.4	Cartesian products	38	
	2.5	Further types of subset	41	
	2.6	Normed linear space	44	
	2.7	Cantor set	49	
3	Set functions			
	3.1	Types of set function	51	
	3.2	Hahn-Jordan decompositions	61	
	3.3	Additive set functions on a ring	65	
	3.4	Length, area and volume of elementary figures	69	
4	Con	struction and properties of measures		
	4.1	Extension theorem; Lebesgue measure	74	
	4.2	Complete measures	81	
	4.3	Approximation theorems	84	
	4.4*	Geometrical properties of Lebesgue measure	88	
	4.5	Lebesgue-Stieltjes measure	95	
5	Definitions and properties of the integral			
	5.1	What is an integral?	100	
	5.2	Simple functions; measurable functions	101	
	5.3	Definition of the integral	110	
	5.4	Properties of the integral	115	
	5.5	Lebesgue integral; Lebesgue-Stieltjes integral	124	
	5.6*	Conditions for integrability	127	

vi	CONTENTS
<b>*</b> •	COMITEMA

6	Rela	ated spaces and measures			
	6.1	Classes of subsets in a product space	page	134	
	6.2	Product measures	_	138	
	6.3	Fubini's theorem		143	
	6.4	•		148	
	6.5	11 0		153	
	6.6*	Measure in function space		157	
	6.7	Applications		162	
7	The space of measurable functions				
	7.1	Point-wise convergence		166	
	7.2	Convergence in measure		171	
	7.3	Convergence in pth mean		174	
	7.4	1		183	
	7.5*	Measure preserving transformations from a space to itself		187	
•	<b>-</b> .				
8	Line	ear functionals			
	8.1	Dependence of $\mathcal{L}_2$ on the underlying $(\Omega, \mathcal{F}, \mu)$		194	
	8.2	Orthogonal systems of functions		199	
	8.3	Licelet discoloni		202	
		Space of linear functionals		209	
	8.5*	The space conjugate to $\mathscr{L}_p$		215	
	8.6*	Mean ergodic theorem		219	
9	Stru	cture of measures in special spaces			
	9.1	Differentiating a monotone function		224	
	9.2	machine megrar		230	
	9.3			236	
		The Daniell integral		241	
		Representation of linear functionals		250	
	9.6*	Haar measure		254	
10	Wha	at is probability?			
	10.1			261	
	10.2	The algebra of events		265	
	10.3	and the state of t		268	
	10.4	probability		272	
	10.5	Independent trials		277	

CONTENTS	vii
CONTENTS	,

11	Kan	dom variables			
	11.1	Random variables as measurable functions page	284		
	11.2	Expectations	286		
	11.3	Distributions of random variables	290		
	11.4	Types of distribution function	292		
	11.5	Independent random variables	295		
	11.6	Discrete distributions	301		
	11.7	Continuous distributions	306		
	11.8	Convergence of random variables	311		
12	Characteristic functions				
	12.1	The space of distribution functions	314		
	12.2	Characteristic functions	322		
	12.3	The inversion and continuity theorems	326		
	12.4	Generating functions	332		
13	Independence				
	13.1	Sequences of independent trials	335		
	13.2	The Borel-Cantelli lemmas and the zero-one law	337		
	13.3	Sums of independent random variables	340		
	13.4	The central limit theorem	348		
	13.5	The law of the iterated logarithm	351		
14	Finite collections of random variables				
	14.1	Joint distributions	356		
	14.2	Conditioning with respect to a random variable	359		
	14.3*	Conditioning with respect to a $\sigma$ -field	363		
		Moments	365		
	14.5	The multinomial distribution	368		
	14.6	The multinormal distribution	370		
15	Stochastic processes				
	15.1	Renewal processes	376		
	15.2	The general theory of stochastic processes	380		
	15.3	Gaussian processes	384		
	15.4	Stationary processes	391		
Inde	x of no	tation	395		
Geni	General index
