

Table of Contents

Chapter 1 - Discrete Probability

1.1 The Cast of Characters	1
1.2 Properties of Probability	10
1.3 Simulation	25
1.4 Random Sampling	38
Sampling in Sequence without Replacement	38
Sampling in a Batch without Replacement	42
Other Sampling Situations	48
1.5 Conditional Probability	54
Multiplication Rules	56
Bayes' Formula	61
1.6 Independence	67

Chapter 2 - Discrete Distributions

2.1 Discrete Random Variables, Distributions, and Expectations	79
Mean, Variance, and Other Moments	86
Two Special Distributions	91
2.2 Bernoulli and Binomial Random Variables	101
2.3 Geometric and Negative Binomial Random Variables	110
2.4 Poisson Distribution	119
Poisson Processes	124
2.5 Joint, Marginal, and Conditional Distributions	129
2.6 More on Expectation	146

Chapter 3 - Continuous Probability

3.1 From the Finite to the (Very) Infinite	163
3.2 Continuous Random Variables and Distributions	171
Joint, Marginal, and Conditional Distributions	179
3.3 Continuous Expectation	194

Chapter 4 - Continuous Distributions

4.1 The Normal Distribution	209
4.2 Bivariate Normal Distribution	225
Bivariate Normal Density	227
Marginal and Conditional Distributions	233
4.3 New Random Variables from Old	245
C.D.F. Technique and Simulation	246
Moment-Generating Functions	252

4.4 Gamma Distributions	259
Main Properties	259
The Exponential Distribution	264
More on the Poisson Process	267
4.5 Chi-Square, Student's t , and F -distributions	272
Chi-Square Distribution	272
Student's t -Distribution	279
F -Distribution	283

Chapter 5 - Asymptotic Theory

5.1 Strong and Weak Laws of Large Numbers	293
5.2 Central Limit Theorem	301

Chapter 6 - Applications of Probability

6.1 Markov Chains	309
6.2 Queues	320
Long-Run Distribution of System Size	322
Waiting Time Distribution	327
Simulating Queues	328
6.3 Mathematical Finance	336
Optimal Portfolios	336
Option Pricing	341

Appendix

A. Short Answers to Selected Exercises	353
B. Glossary of <i>Mathematica</i> Commands for Probability	365

References	373
Index	375
