Preface *page ix*

**Introduction** 1

Von Mises' theory of probability, p. 1; Keynes' theory of probability, p. 7; Comparison between von Mises and Keynes, p. 14; Development of the logical tradition after Keynes, p. 15; Characterization of the scientific approach, p. 25; The two-concept view, p. 27; General outline of the book, p. 31.

## PART I: THE SPECIAL SCIENCES IN GENERAL

**1 Von Mises' Philosophy of Science: Its Machian Origins** 37

Mach's development of mechanics, p. 38; Operationalism, p. 42; Some objections to operationalism, p. 44.

**2 Force and Mass** 48

The concepts of force and mass before Newton, p. 48; How Newton introduced the concepts of force and mass, p. 50; The 'moon-test' of the law of gravity, p. 54; How force and mass came to be measurable, p. 57.

**3 Conceptual Innovation in the Exact Sciences** 59

Another illustration of conceptual innovation: the concept of temperature, p. 59; General theory of conceptual innovation, p. 63; How our theory of conceptual innovation avoids the difficulties in operationalism, p. 63; A digression on 'testing' and 'accepting' scientific theories, p. 65; The problem of depth, p. 69; The generalized principle of correspondence and related questions, p. 71; How the ideas of Part I will be applied to the theory of probability, p. 73.

## PART II: THE AXIOMATIC SUPERSTRUCTURE

- 4 Probability and Frequency** 77  
 Three views on the relations between probability and frequency, p. 77; Randomness in von Mises' theory, p. 82; Comparison between von Mises and Kolmogorov, p. 87; Two criticisms of Kolmogorov by von Mises, p. 89.
- 5 Repeatability and Independence** 94  
 Analysis of repeatability, p. 94; Repeatable conditions with dependent outcomes, p. 97; Arguments against the axiom of independent repetitions, p. 99; Main argument for the axiom of independent repetitions, p. 101; Derivation of the law of stability of statistical frequencies, p. 103; Comparison with Newtonian mechanics, p. 107; Criticism of the views of von Mises and Kolmogorov on the relations between probability and frequency, p. 108; An answer to some arguments of Doob's, p. 110; Criticism of the 'laws of large numbers' view, p. 112; The significance of the laws of large numbers, p. 116.
- 6 Deduction of the Law of Excluded Gambling Systems: The Role of Randomness in Probability Theory** 119  
 Deduction of the law of excluded gambling systems, p. 119; Independence and gambling systems, p. 120; A practical example, p. 124; Definition of random sequences and their generation in practice, p. 127; Relation to randomness as defined in the frequency theory, p. 130; Answer to an objection of Braithwaite's, p. 132; Probability theory and determinism, p. 133; Discussion of some arguments of Khintchine's, p. 134; Possible modifications of the axioms of probability in the light of experience, p. 137.
- 7 Probabilities of Single Events: Popper's Propensity Theory** 140  
 Singular probabilities, p. 140; Popper's propensity theory, p. 143; Similarities between Popper's propensity theory and von Mises' frequency theory, p. 147; A criticism of the propensity theory, p. 149; Another argument for the axiom of independent repetitions, p. 150; Discussion of a possible simplification, p. 153; An answer to some objections of Ayer's, p. 156.

PART III: A FALSIFYING RULE FOR PROBABILITY  
STATEMENTS

<b>8 The Falsification Problem for Probability Statements</b>	161
Statement of the problem, p. 161; Popper's proposed solution, p. 162; The problem of producing an F.R.P.S., p. 163; Some notes on the history of the problem, p. 164.	
<b>9 Formulation of a Falsifying Rule</b>	167
First version of the rule, p. 167; Second version of the rule, p. 168; Third version of the rule, p. 169; Final version of the rule, p. 171; Application of the rule to an important special case, p. 173; Relation of the present approach to the Neyman-Pearson theory, p. 176.	
<b>10 Evaluation of the Falsifying Rule</b>	180
Braithwaite's theory of probability: statement, p. 180; Braithwaite's theory of probability: criticism, p. 182; Possible ways of justifying the F.R.P.S., p. 186; The practical success but inconsistency of the F.R.P.S., p. 187; The F.R.P.S. in relation to the theory of errors, p. 191; Resolution of a problem connected with the F.R.P.S., p. 193.	
<b>11 The Neyman-Pearson Theory</b>	195
Outline of the Neyman-Pearson theory, p. 195; The Neyman-Pearson theory without an F.R.P.S., p. 199; The Neyman-Pearson theory with a falsifying rule, p. 202; Two counter-examples from statistical practice, p. 206; Quantitative versus qualitative considerations, p. 216; A reply to some objections of Neyman's, p. 219.	
<b>Appendix: Explanation of Technical Terminology</b>	227
References	239
Index to Appendix	245
General Index	247
