

# Contents

1.	Foundations . . . . .	11
1.1.	The basic spaces . . . . .	11
1.2.	Random measures and point processes . . . . .	13
1.3.	Basic processes and mappings . . . . .	14
1.4.	Exercises . . . . .	17
2.	Sample realizations . . . . .	19
2.1.	Decompositions . . . . .	19
2.2.	Intensities and regularity . . . . .	21
2.3.	Absolute continuity . . . . .	23
2.4.	Exercises . . . . .	25
3.	Uniqueness . . . . .	27
3.1.	The general case . . . . .	27
3.2.	Simplicity and diffuseness . . . . .	28
3.3.	Compound point processes . . . . .	30
3.4.	Exercises . . . . .	30
4.	Convergence in distribution . . . . .	32
4.1.	The general case . . . . .	32
4.2.	Simplicity and diffuseness . . . . .	35
4.3.	The weak topology . . . . .	37
4.4.	Exercises . . . . .	38
5.	Existence . . . . .	40
5.1.	Limit unknown . . . . .	40
5.2.	General existence criteria . . . . .	41
5.3.	The point process case . . . . .	42
5.4.	Exercises . . . . .	43
6.	Infinite divisibility, generalities . . . . .	45
6.1.	Representation and convergence . . . . .	45
6.2.	Cluster representations . . . . .	51
6.3.	The canonical measures . . . . .	51
6.4.	Exercises . . . . .	54
7.	Infinite divisibility, special cases . . . . .	56
7.1.	Independent increments . . . . .	56
7.2.	Simplicity and diffuseness . . . . .	59
7.3.	Exercises . . . . .	62

8.	Compounding and thinning . . . . .	65
8.1.	The case of relative compactness . . . . .	65
8.2.	Compounding variables tending to zero . . . . .	67
8.3.	Thinning and Cox processes . . . . .	69
8.4.	Exercises . . . . .	71
9.	Symmetric distributions . . . . .	73
9.1.	Mixed Poisson and sample processes . . . . .	74
9.2.	The general case . . . . .	77
9.3.	Infinite divisibility . . . . .	80
9.4.	Exercises . . . . .	81
10.	Palm distributions . . . . .	83
10.1.	Definitions and basic properties . . . . .	83
10.2.	Uniqueness and continuity . . . . .	85
10.3.	Infinite divisibility . . . . .	87
10.4.	Null-arrays . . . . .	89
10.5.	Exercises . . . . .	90
11.	Characterisations involving Palm distributions . . . . .	93
11.1.	Infinite divisibility . . . . .	93
11.2.	A related factorization . . . . .	95
11.3.	Mixed Poisson and sample processes . . . . .	97
11.4.	Symmetric distributions . . . . .	98
11.5.	Exercises . . . . .	101
12.	Palm and supporting measures . . . . .	103
12.1.	Definitions and consistency . . . . .	103
12.2.	Decompositions and uniqueness . . . . .	104
12.3.	The point process case . . . . .	109
12.4.	Links to conditioning . . . . .	113
12.5.	Exercises . . . . .	118
13.	Gibbs and Papangelou kernels . . . . .	121
13.1.	Basic results . . . . .	121
13.2.	Regularity conditions . . . . .	128
13.3.	Absolute continuity . . . . .	134
13.4.	Symmetry . . . . .	136
13.5.	A boundedness condition . . . . .	138
13.6.	Exercises . . . . .	140
14.	Local conditioning . . . . .	142
14.1.	Local limits . . . . .	142
14.2.	Regularity and decompositions . . . . .	147
14.3.	Conditional intensities . . . . .	151
14.4.	Exvisibility . . . . .	159
14.5.	Exercises . . . . .	160

Contents	9
15. Appendix . . . . .	163
15.1. Some basic topology . . . . .	163
15.2. Monotone class theorems . . . . .	163
15.3. Measure and probability . . . . .	164
15.4. Convergence in distribution . . . . .	166
15.5. Laplace transforms . . . . .	167
15.6. Locally compact spaces . . . . .	168
15.7. Measures on locally compact spaces. . . . .	168
15.8. Martingales . . . . .	171
15.9. Exercises . . . . .	172
Historical remarks . . . . .	173
References . . . . .	178
Symbol Index . . . . .	183
