## TABLE OF CONTENTS

|         |                                     |   | Pag      |
|---------|-------------------------------------|---|----------|
|         | Chapter I.                          | Introduction.                                     | 1        |
| Part 1. | Analytical and Probabilistic Basis. |   |          |
|         | Chapter II.                         | Basic Operator Theory.                            | 3        |
|         |                                     | Functional Calculus                               | 3        |
|         |                                     | Exponentials                                      | 3        |
|         |                                     | Heisenberg Group Formulation                      | 4        |
|         |                                     | The Operator xD                                   | 6<br>6   |
|         |                                     | Hamiltonian Formulation Some Contours             | 7        |
|         | Chapter III.                        | Moment Theory.                                    | 8        |
|         |                                     | The Operator C                                    | 8        |
|         |                                     | Moment Polynomials                                | 8        |
|         |                                     | Functions with Negative Index                     | 10       |
|         |                                     | Vacuum Functions                                  | 10       |
|         |                                     | Canonical Vacuums for H = L(z)                    | 11       |
|         |                                     | Differential and Integral Representations         | 13<br>14 |
|         |                                     | Inversion Formula                                 | 14       |
|         |                                     | Expansions in Terms of h's<br>Reproducing Kernel  | 15       |
|         |                                     | The Flow for A                                    | 16       |
|         |                                     | Application to the Integral of a Process          | 16       |
|         |                                     | Some Aspects of Physical Significance             | 17       |
|         |                                     | Examples of Moment Theory                         | 18       |
|         | Chapter IV.                         | Orthogonal Theory.                                | 22       |
|         |                                     | Bernoulli Generators                              | 22       |
|         |                                     | Canonical Forms                                   | 23<br>25 |
|         |                                     | Representations of J                              | 26       |
|         |                                     | Expansions Generalized Rodrigues Formula          | 26       |
|         |                                     | Data for J's: Recurrence Formula, Value of jn     | 28       |
|         |                                     | Reproducing Kernel and Associated Kernel          | 29       |
|         |                                     | garaniani Unrishies                               | 31       |
|         |                                     | Appendix: Summary of Notation Used for Parameters | 34       |
|         |                                     | General Forms                                     | 34       |
|         | Chapter V.                          | The Standard Processes. Examples.                 | 35       |
|         |                                     | The Bernoulli Process                             | 35       |
|         |                                     | The Symmetric Bernoulli Process                   | 39       |
|         |                                     | The Exponential Process                           | 41<br>45 |
|         |                                     | The Poisson Process                               | 49       |
|         |                                     | Brownian Motion Canonical Moments                 | 51       |
|         |                                     |   |          |

|         | Chapter V, continued.          |  |                |  |
