

Contents

	<i>Preface</i>	vii
	<i>Acknowledgements</i>	ix
<i>Chapter 7</i>	Existence of Independent Complements	1
	7.1 A Decomposition of X	1
	7.2 Rohlin's Theorem	4
	7.3 A Sufficient Condition	10
	7.4 Necessary and Sufficient Conditions	12
	7.5 Application to Perfect Spaces	19
<i>Chapter 8</i>	Standard Measure Spaces	20
	8.1 Definition of a Standard Measure Space	20
	8.2 Structure of a Standard Measure Space	24
	8.3 Properties of a Standard Measure Space	28
	8.4 Measure Algebra of a Standard Measure Space	30
	8.5 Existence of r.c.p.'s	34
	8.6 Quotient Spaces	35
	8.7 Products of Standard Measure Spaces	37
	8.8 Classification of c.g. Sub σ -algebras of Standard Measure Spaces	41
<i>Chapter 9</i>	Mixtures of Perfect Measures	53
	9.1 The Examples	54
	9.2 Perfect Mixtures of Discrete Measures	58
	9.3 A Characterization of Perfectness in Separable Spaces	61
	9.4 Perfect Mixtures of Perfect Measures	67
	9.5 Mixtures of Compact Measures	70
<i>Chapter 10</i>	Integral Representations of Invariant Measures	73
	10.1 Preliminaries	74
	10.2 Integral Representation Theorem Due to Maitra	75
<i>Chapter 11</i>	Disintegration and Compactness	82
	11.1 Disintegration	82
	11.2 Preliminary Results	89
	11.3 Existence of Disintegration	92
	11.4 Disintegrability and Inheritance of Compactness by Thick Subsets	96
	11.5 Inheritance of Disintegrability and Compactness by Sub σ -algebras	100
	11.6 Comments	101

<i>Chapter 12</i>	Further Results on Compact and Perfect Measures	104
	12.1 Properties of Compact Measures	104
	12.2 Further Results on Perfect Measures	108
	12.3 Measures in Metric Spaces	113
	12.4 Connections with Other Classes of Measures	116
	<i>List of Unsolved Problems</i>	123
	<i>Bibliography</i>	124
