Introduction	1
Chapter I. Auxiliary Results	5
§1. Results on duality theory and on the structure of locally compact abelian groups	5
§2. Results on probability theory	10
§3. Results on function theory and on analytic properties of characteristic functions	18
Chapter II. Arithmetic of Distributions	23
§4. Group analogs of the Khinchin factorization theorems	23
§5. Gaussian distribution	33
§6. Decomposition of a generalized Poisson distribution	57
§7. Group analogs of Linnik's theorems	86
§8. General theorems on distributions of class $I_0$	110
Chapter III. Characterization Problems	121
§9. Bernstein's characterization of Gaussian distribution	121
§10. Characterization of Gaussian distribution by independence of linear statistics	135
§11. Characterization of Gaussian distribution by identical distribution of a monomial and a linear form	151
Appendix 1. Group Analogs of the Marcinkiewicz Theorem and the Lukacs Theorem	173
Appendix 2. On Decomposition Stability of Distributions	181
Appendix 3. Structure of Infinitely Divisible Poisson Distributions	189
Appendix 4. On Distributions with Mutually Singular Powers	195
