Preface	xi
Introduction	1
1 Basic definitions	5
1.1 One-sample <i>UB</i> -statistics	5
1.2 Multi-sample <i>UB</i> -statistics	15
1.3 Von Mises' statistics	21
1.4 Banach-valued symmetric statistics	23
1.5 Permanent symmetric statistics	24
1.6 Multiple stochastic integrals	27
1.7 <i>B</i> -valued polynomial chaos	29
2 Inequalities	31
2.1 Inequalities based on the Hoeffding formula	31
2.2 Martingale moment inequalities	37
2.3 Maximal inequalities	42
2.4 Contraction and symmetrization inequalities	44
2.5 Decoupling inequalities	48
2.6 Hypercontractive method in moment inequalities	64
2.7 Moment inequalities in Banach spaces of type p	71
3 Law of large numbers	73
3.1 One-sample <i>UB</i> -statistics	73
3.2 Multi-sample <i>UB</i> -statistics	79
3.3 Von Mises' statistics	84
3.4 Estimates of convergence rates	86
4 Weak convergence	95
4.1 Central limit theorem	95
4.2 Convergence to a chaos	102
4.3 Multi-sample <i>UB</i> -statistics	114

4.4	Poisson approximation	124
4.5	Stable approximation	129
4.6	Approximation with increasing degrees	132
4.7	Symmetric statistics	146
4.8	U -statistics with varying kernels	152
4.9	Weighted U -statistics	160
5	Functional limit theorems	165
5.1	Non-degenerate kernels	166
5.2	Degenerate kernels	170
5.3	Weak convergence to a chaos process	174
5.4	Weak convergence in the Poisson approximation scheme	182
5.5	Invariance principle for symmetric statistics	184
5.6	Functional limit theorems with varying kernels	187
5.7	Weak convergence of U -processes	191
6	Approximation estimates	201
6.1	General methods of estimation	201
6.2	Rate of normal approximation of UR -statistics	205
6.3	Estimates with increasing degree	215
6.4	Nonuniform estimates	224
6.5	Rate of chaos approximation	226
6.6	Normal approximation of UH -statistics	237
6.7	Multi-sample UH -statistics	277
6.8	Estimates in central limit theorem in l_{2p}	279
6.9	Rate of Poisson approximation	291
7	Asymptotic expansions	295
7.1	Expansions for non-degenerate UR -statistics	296
7.2	General method of expansions	311
7.3	Expansions with canonical kernels	316
7.4	Expansions with arbitrary kernels	323
8	Large deviations	327
8.1	Exponential inequalities	327
8.2	Moderate deviations	335
8.3	Power zones of normal convergence	337
8.4	Probabilities of large deviations for UH -statistics	339

9 Law of iterated logarithm	349
9.1 UR -statistics	350
9.2 UH -statistics	351
9.3 Bounded LIL	352
9.4 Compact LIL	357
9.5 Functional LIL	360
9.6 Multi-sample UB -statistics	361
10 Dependent variables	365
10.1 Symmetrically dependent random variables	365
10.2 Weakly dependent random variables	366
10.3 Bootstrap variables	369
10.4 Order statistics	375
Bibliographical supplements and comments	377
Bibliography	385
Index	419
