Introduction 1

Chapter 1 — The Maximum Entropy Principle 5
1.1 Introduction 5
1.2 The Measurement of Information 6
1.3 The Entropy of a Continuous Distribution 8
1.4 Multivariate Extensions 10
1.5 Conditional Entropies and Average Conditional Entropies 12

Chapter 2 — The ME Distribution of a Univariate Sample 15
2.1 Introduction 15
2.2 Mass- and Mean-Preserving Constraints 16
2.3 The Univariate ME Distribution 17
2.4 Derivations 20
Chapter 3 — The ME Distribution of a Multivariate Sample

3.1 The Bivariate and Multivariate ME Distributions
3.2 Secondary Midpoints of a Bivariate Sample
3.3 The ME Covariance Matrix
3.4 The ME Variance Further Considered
3.5 A Numerical Example
3.6 The Expected Mutual Information of the ME Distribution
3.7 The ME Distribution with Missing Values
3.8 The ME Distribution with Ties

Chapter 4 — More on the Univariate ME Distribution: Evidence and Extensions

4.1 The ME Median
4.2 The ME Quartiles and Interquartile Distance
4.3 Quantiles in the Tails
4.4 Higher-Order Moments
4.5 The Symmetric ME Distribution
4.6 Outliers
4.7 Restricted ME Distributions

Chapter 5 — The ME Covariance Matrix: Evidence and Extensions

5.1 Ridge and Shrinkage: The ME Variance under Normality
5.2 The ME Correlation Coefficient under Bivariate Normality
5.3 A Risk Evaluation of the ME Covariance Matrix
5.4 Extensions to Missing Values and Empirical Bayes
5.5 The Hybrid Sample—ME Covariance Matrix
5.6 Regressions Based on Few Observations
5.7 Extension to Multiple Regression

Chapter 6 — Canonical Correlation Coefficients and Constrained Regressions

6.1 How Asymptotic Tests Can Be Misleading
6.2 Canonical Correlations and Applications
6.3 Estimation of Canonical Correlations
6.4 Symmetry-Constrained Estimation
6.5 Discussion of the Results
Chapter 7 — Simultaneous Equation Estimation from Undersized Samples 133

7.1 Introduction 133
7.2 The Problem of Undersized Samples 136
7.3 The Case of Two Variables 138
7.4 Extension to Three Variables 146
7.5 Further Extensions 150

Appendix A — Measures of Statistical Information Theory 151
A1 An Axiomatic Approach to the Measurement of Information 151
A2 The Expected Information of a Nondefinitive Message 153
A3 Derivations 155
A4 Aggregation Properties of Informational Measures 156
A5 The Kullback—Leibler Mean Information 158
A6 Some Results for the Multivariate Normal Distribution 160
A7 The Measurement of Inequality 161
A8 Disutility-Weighted Informational Measures 165

Appendix B — Derivations for the ME Distribution 169
B1 Univariate ME Moments and Cumulants 169
B2 Bivariate ME Moments and Cumulants 174
B3 More about Ties 178
B4 The Effects of Symmetrizing Order Statistics 181
B5 More about Outliers 185
B6 The Positive ME Distribution 192

Appendix C — Additional Simulation Evidence 195
C1 Two Different Ways of Symmetrizing a Distribution 195
C2 More on Correlation Estimation 196
C3 More on Symmetric Normal Mixtures 197
C4 More on Risk Evaluation of Covariance Matrices 208

Appendix D — Elements of Consumption Theory 219
D1 The Differential Approach to Consumption Theory 219
D2 The Rotterdam Model 224
D3 Working's Model and Extensions 224
Appendix E — Computer Programs 229
E1 Discussion of Computational Aspects 229
E2 SAS and FORTRAN Programs 231
