<i>Preface</i>	xi
<i>Introduction</i>	xiii
Chapter 1 Background Material	1
1.1. Cauchy Functional Equations	1
1.2. Auxiliary Results from Analysis	6
1.3. Distribution Functions and Characteristic Functions	10
Notes and Remarks	22
Chapter 2 Integrated Cauchy Functional Equations on \mathbb{R}_+	23
2.1. The ICFE on \mathbb{Z}_+	24
2.2. The ICFE on \mathbb{R}_+	26
2.3. An Alternative Proof Using Exchangable R.V.'s	33
2.4. The ICFE with a Signed Measure	35
2.5. Application to Characterization of Probability Distributions	39
Notes and Remarks	49
Chapter 3 The Stable Laws, the Semistable Laws, and a Generalization	51
3.1. The Stable Laws	51
3.2. The Semistable Laws	59
3.3. The Generalized Semistable Laws and the Normal Solutions	61
3.4. The Generalized Semistable Laws and the Nonnormal Solutions	63
Appendix: Series Expansions for Stable Densities ($\alpha \neq 1, 2$)	69
Notes and Remarks	70

Chapter 4	Integrated Cauchy Functional Equations with Error Terms on \mathbb{R}_+	71
4.1.	ICFE's with Error Terms on \mathbb{R}_+ : The First Kind	71
4.2.	Characterizations of Weibull Distribution	75
4.3.	A Characterization of Semistable Laws	81
4.4.	ICFE's with Error Terms on \mathbb{R}_+ : The Second Kind	90
	Notes and Remarks	97
Chapter 5	Independent/Identically Distributed Linear Forms, and the Normal Laws	99
5.1.	Identically Distributed Linear Forms	99
5.2.	Proof of the Sufficiency Part of Linnik's Theorem	105
5.3.	Proof of the Necessity Part of Linnik's Theorem	113
5.4.	Zinger's Theorem	119
5.5.	Independence of Linear Forms in Independent R.V.'s	125
	Notes and Remarks	128
Chapter 6	Independent/Identical Distribution Problems Relating to Stochastic Integrals	130
6.1.	Stochastic Integrals	130
6.2.	Characterization of Wiener Processes	134
6.3.	Identically Distributed Stochastic Integrals and Stable Processes	138
6.4.	Identically Distributed Stochastic Integrals and Semistable Processes	149
	Appendix: Some Phragmén–Lindelöf-type Theorems and Other Auxiliary Results	154
	Notes and Remarks	158
Chapter 7	Distribution Problems Relating to the Arc-sine, the Normal, and the Chi-Square Laws	159
7.1.	An Equidistribution Problem, and the Arc-sine Law	159
7.2.	Distribution Problems Involving the Normal and the χ_1^2 Laws	169
7.3.	Quadratic Forms, Noncentral χ^2 Laws, and Normality	174
	Notes and Remarks	184
Chapter 8	Integrated Cauchy Functional Equations on \mathbb{R}	185
8.1.	The ICFE on \mathbb{R} and on \mathbb{Z}	185
8.2.	A Proof Using the Krein–Milman Theorem	197
8.3.	A Variant of the ICFE on \mathbb{R} and the Wiener–Hopf Technique	199
	Notes and Remarks	209

Chapter 9	Integrated Cauchy Functional Equations on Semigroups of \mathbb{R}^d	210
9.1.	Exponential Functions on Semigroups	211
9.2.	Translations of Measures	216
9.3.	The Skew Convolution	220
9.4.	The Cones Defined by Convolutions and Their Extreme Rays	224
9.5.	The ICFE on Semigroups of \mathbb{R}^d	230
	Appendix: Weak Convergence of Measures; Choquet's Theorem	236
	Notes and Remarks	239
<i>Bibliography</i>		241
<i>Index</i>		247
