<i>Preface</i>	<i>page</i> xiii
1 Introduction: Donsker's Theorem, Metric Entropy, and Inequalities	1
1.1 Empirical processes: the classical case	2
1.2 Metric entropy and capacity	10
1.3 Inequalities	12
Problems	18
Notes	19
References	21
2 Gaussian Measures and Processes; Sample Continuity	23
2.1 Some definitions	23
2.2 Gaussian vectors are probably not very large	24
2.3 Inequalities and comparisons for Gaussian distributions	31
2.4 Gaussian measures and convexity	40
2.5 The isonormal process: sample boundedness and continuity	43
2.6 A metric entropy sufficient condition for sample continuity	52
2.7 Majorizing measures	59
2.8 Sample continuity and compactness	74
**2.9 Volumes, mixed volumes, and ellipsoids	78
**2.10 Convex hulls of sequences	82
Problems	83
Notes	86
References	88
3 Foundations of Uniform Central Limit Theorems: Donsker Classes	91
3.1 Definitions: convergence in law	91
3.2 Measurable cover functions	95

3.3	Almost uniform convergence and convergence in outer probability	100
3.4	Perfect functions	103
3.5	Almost surely convergent realizations	106
3.6	Conditions equivalent to convergence in law	111
3.7	Asymptotic equicontinuity and Donsker classes	117
3.8	Unions of Donsker classes	121
3.9	Sequences of sets and functions	122
	Problems	127
	Notes	130
	References	132
4	Vapnik-Červonenkis Combinatorics	134
4.1	Vapnik-Červonenkis classes	134
4.2	Generating Vapnik-Červonenkis classes	138
*4.3	Maximal classes	142
*4.4	Classes of index 1	145
*4.5	Combining VC classes	152
4.6	Probability laws and independence	156
4.7	Vapnik-Červonenkis properties of classes of functions	159
4.8	Classes of functions and dual density	161
**4.9	Further facts about VC classes	165
	Problems	166
	Notes	167
	References	168
5	Measurability	170
*5.1	Sufficiency	171
5.2	Admissibility	179
5.3	Suslin properties, selection, and a counterexample	185
	Problems	191
	Notes	193
	References	194
6	Limit Theorems for Vapnik-Červonenkis and Related Classes	196
6.1	Koltchinskii-Pollard entropy and Glivenko-Cantelli theorems	196
6.2	Vapnik-Červonenkis-Steele laws of large numbers	203
6.3	Pollard's central limit theorem	208
6.4	Necessary conditions for limit theorems	215
**6.5	Inequalities for empirical processes	220
**6.6	Glivenko-Cantelli properties and random entropy	223
**6.7	Classification problems and learning theory	226
	Problems	227

Notes	228
References	230
7 Metric Entropy, with Inclusion and Bracketing	234
7.1 Definitions and the Blum-DeHardt law of large numbers	234
7.2 Central limit theorems with bracketing	238
7.3 The power set of a countable set: the Borisov-Durst theorem	244
**7.4 Bracketing and majorizing measures	246
Problems	247
Notes	248
References	248
8 Approximation of Functions and Sets	250
8.1 Introduction: the Hausdorff metric	250
8.2 Spaces of differentiable functions and sets with differentiable boundaries	252
8.3 Lower layers	264
8.4 Metric entropy of classes of convex sets	269
Problems	281
Notes	282
References	283
9 Sums in General Banach Spaces and Invariance Principles	285
9.1 Independent random elements and partial sums	286
9.2 A CLT implies measurability in separable normed spaces	291
9.3 A finite-dimensional invariance principle	293
9.4 Invariance principles for empirical processes	301
**9.5 Log log laws and speeds of convergence	306
Problems	309
Notes	310
References	311
10 Universal and Uniform Central Limit Theorems	314
10.1 Universal Donsker classes	314
10.2 Metric entropy of convex hulls in Hilbert space	322
**10.3 Uniform Donsker classes	328
Problems	330
Notes	330
References	330
11 The Two-Sample Case, the Bootstrap, and Confidence Sets	332
11.1 The two-sample case	332
11.2 A bootstrap central limit theorem in probability	335
11.3 Other aspects of the bootstrap	357

**11.4	Further Giné-Zinn bootstrap central limit theorems	358
	Problems	359
	Notes	360
	References	361
12	Classes of Sets or Functions Too Large for Central Limit Theorems	363
12.1	Universal lower bounds	363
12.2	An upper bound	365
12.3	Poissonization and random sets	367
12.4	Lower bounds in borderline cases	373
12.5	Proof of Theorem 12.4.1	384
	Problems	388
	Notes	388
	References	389
<i>Appendix A</i>	Differentiating under an Integral Sign	391
<i>Appendix B</i>	Multinomial Distributions	399
<i>Appendix C</i>	Measures on Nonseparable Metric Spaces	402
<i>Appendix D</i>	An Extension of Lusin's Theorem	405
<i>Appendix E</i>	Bochner and Pettis Integrals	407
<i>Appendix F</i>	Nonexistence of Types of Linear Forms on Some Spaces	413
<i>Appendix G</i>	Separation of Analytic Sets; Borel Injections	417
<i>Appendix H</i>	Young-Orlicz Spaces	421
<i>Appendix I</i>	Modifications and Versions of Isonormal Processes	425
	<i>Subject Index</i>	427
