<b>Part I. The IID Case: Functional Laws of Small Numbers</b> .....	<b>1</b>
<b>1 Functional Laws of Small Numbers</b>	
1.1 Introduction .....	3
1.2 Bounds for the Functional Laws of Small Numbers .....	7
1.3 Applications .....	14
<b>2 Extreme Value Theory</b>	
2.1 Von Mises Conditions .....	25
2.2 $\delta$ -Neighborhoods of Generalized Pareto Distributions .....	35
2.3 The Peaks Over Threshold Method .....	43
2.4 Parameter Estimation in $\delta$ -Neighborhoods of GPDs .....	48
2.5 Initial Estimation of the Class Index .....	58
<b>3 Estimation of Conditional Curves</b>	
3.1 Poisson Process Approach .....	71
3.2 Applications: The Nonparametric Case .....	79
3.3 Applications: The Semiparametric Case .....	84
3.4 Extension to Several Points .....	91
3.5 A Nearest Neighbor Alternative .....	96
3.6 Application: Optimal Accuracy of Estimators .....	101
<b>4 Multivariate Maxima</b>	
4.1 Limiting Distributions .....	105
4.2 Representations and Dependence Functions .....	111
4.3 Max-Stable Stochastic Processes .....	119
<b>5 Multivariate Extremes</b>	
5.1 Strong Approximation of Exceedances .....	125
5.2 Further Concepts of Extremes .....	132

<b>6</b>	<b>Extreme Value Analysis with X<sub>TREME</sub>S</b>	
6.1	Artificial Data .....	137
6.2	Real Grouped Data .....	140
6.3	Real Continuous Data .....	144
	<b>Part II. Non IID Observations</b> .....	<b>155</b>
<b>7</b>	<b>Introduction to the Non IID Case</b>	
7.1	Definitions .....	157
7.2	Stationary Random Sequences .....	158
7.3	Independent Random Sequences .....	160
7.4	Nonstationary Random Sequences .....	165
<b>8</b>	<b>Extremes of Random Sequences</b>	
8.1	Introduction and General Theory .....	169
8.2	Applications: Stationary Sequences .....	179
8.3	Applications: Independent Sequences .....	182
8.4	Applications: Nonstationary Sequences .....	185
<b>9</b>	<b>Extremes of Gaussian Processes</b>	
9.1	Introduction .....	191
9.2	Stationary Gaussian Processes .....	192
9.3	Nonstationary Gaussian Processes .....	194
9.4	Application: Empirical Characteristic Functions .....	200
<b>10</b>	<b>Extensions for Rare Events</b>	
10.1	Rare Events of Random Sequences .....	205
10.2	The Point Process of Exceedances .....	209
10.3	Application to Peaks over Threshold .....	214
10.4	Application to Rare Events .....	218
10.5	Triangular Arrays of Rare Events .....	220
10.6	Multivariate Extremes of Non IID Sequences .....	226
<b>11</b>	<b>Statistics of Extremes</b>	
11.1	Introduction .....	237
11.2	Estimation of $\theta$ and $\pi(\cdot)$ .....	238
11.3	Application to Ecological Data .....	240
11.4	Frost Data: An Application .....	245
	<b>Appendix: User's Guide to X<sub>TREME</sub>S</b> .....	<b>255</b>
A.1	Getting Started .....	256
A.1.1	Preparations .....	256
A.1.2	Becoming Acquainted with X <sub>TREME</sub> S .....	256
A.1.3	Hot Keys .....	259
A.1.4	Window Options and Help Menus .....	261

A.2	XRFEMES in Action .....	262
A.2.1	Implemented Distributions .....	263
A.2.2	Generating and Reading Data .....	264
A.2.3	Nonparametric Estimation .....	267
A.2.4	Estimation in the $\alpha$ -Mode .....	267
A.2.5	Estimation in the $\beta$ -Mode .....	269
A.2.6	Simulations .....	270
A.2.7	Important Facilities and Advice .....	273
<b>Author Index</b> .....		<b>275</b>
<b>Subject Index</b> .....		<b>279</b>
