Chapter 1

A study of random sequences via the dependence coefficient

1.1. The general case	1
1.1.1. The dependence coefficient	1
1.1.1.1. Borel-Cantelli type properties	1
1.1.1.2. The 0—1 law	5
1.1.1.3. Two auxiliary results	7
1.1.2. Generalizations of Bienaymé's equality	10
1.1.2.1. Some inequalities concerning the covariance	10
1.1.2.2. Applications to the variance of sums	12
1.1.3. Convergence of series	13
1.1.3.1. The a.s. convergence.	13
1.1.3.2. The strong law of large numbers	17
1.1.4. The central limit theorem	22
1.1.4.1. The variance of sums	22
1.1.4.2. Different variants	28
1.1.5. The law of the iterated logarithm	34
1.1.5.1. Two auxiliary results	34
1.1.5.2. The main theorem.	35
1.2. The Markovian case	38
1.2.1. The coefficient of ergodicity	38
1.2.1.1. Introductory definitions	38
1.2.1.2. Properties	40
1.2.1.3. The relationship to the independence coefficient	43
1.2.2. A lower bound for the variance.	45
1.2.2.1. The main theorem.	45
1.2.2.2. Auxiliary results	46
1.2.3. Asymptotic properties	51
1.2.3.1. Borel-Cantelli lemma and the 0—1 law.	51
1.2.3.2. Generalizations of Bienaymé's equality	52

1.2.3.3. Convergence of series	54
1.2.3.4. The strong law of large numbers	56
1.2.3.5. The central limit theorem and the law of the iterated logarithm	60

Chapter 2

Random systems with complete connections

2.1. Ergodicity	63
2.1.1. Basic definitions	63
2.1.1.1. The concept of random system with complete connections	63
2.1.1.2. The associated Markov system	66
2.1.1.3. The associated operators	67
2.1.2. Different types of ergodicity	69
2.1.2.1. Definitions and auxiliary results	69
2.1.2.2. Uniform ergodicity in the weak sense	77
2.1.2.3. Uniform ergodicity for the homogeneous case	81
2.1.2.4. Uniform ergodicity in the strong sense	86
2.1.2.5. Application to multiple Markov chains	89
2.1.2.6. Application to the associated Markov system	96
2.1.3. An operator-theoretical approach	97
2.1.3.1. Mean and uniform ergodic theorems	97
2.1.3.2. Ergodic theorems for a special class of operators	99
2.1.3.3. Application to the associated Markov system	116
2.1.3.4. Application to the ergodicity of homogeneous random systems with complete connections	128
2.2. Asymptotic behaviour	131
2.2.1. Properties not supposing the ergodicity	131
2.2.1.1. Borel-Cantelli lemma and the 0—1 law	131
2.2.1.2. Convergence and the strong law of large numbers	132
2.2.2. Properties supposing the ergodicity	134
2.2.2.1. Basic results	134
2.2.2.2. The strong law of large numbers	137
2.2.2.3. The weak law of large numbers	140
2.2.2.4. The central limit theorem	145
2.2.2.5. The law of the iterated logarithm	152
2.2.2.6. Some nonparametric statistics	153
2.3. Special random systems with complete connections	155
2.3.1. OM-chains	155
2.3.1.1. Basic definitions	155

2.3.1.2. Examples	160
2.3.1.3. Ergodic theorems	168
2.3.1.4. The Monte Carlo simulation	176
2.3.1.5. The case of an arbitrary set of states	184
2.3.2. Chains of infinite order	186
2.3.2.1. Definition and several special cases	186
2.3.2.2. An existence theorem	188
2.3.2.3. The case of a finite set of states	190
2.3.3. Other examples	198
2.3.3.1. Partially observable sequences	198
2.3.3.2. Miscellanea	202

Chapter 3

Learning

3.1. Basic models	203
3.1.1. Introductory definitions and notions	203
3.1.1.1. Description of models	203
3.1.1.2. The simulation of models	207
3.1.2. Distance diminishing models	210
3.1.2.1. Description of the model	210
3.1.2.2. Theorems concerning states	211
3.1.2.3. Theorems concerning events	215
3.1.3. Finite state models	217
3.1.3.1. Introductory comments	217
3.1.3.2. Properties	218
3.2. Linear models	219
3.2.1. The $(t+1)$ -operator model	219
3.2.1.1. Description of the model	219
3.2.1.2. The $(m+1)^2$ -operator model with reinforcement	225
3.2.1.3. The limiting distribution function	232
3.2.2. Experimenter-, subject- and experimenter-subject- controlled events	245
3.2.2.1. Experimenter-controlled events	245
3.2.2.2. Subject-controlled events	257
3.2.2.3. Experimenter-subject-controlled events	261
3.3. Nonlinear models	264
3.3.1. The beta model	264
3.3.1.1. Description of the model	264
3.3.1.2. Some auxiliary results	267
3.3.1.3. Properties	270

3.3.2. The simultaneous discrimination learning model	278
3.3.2.1. Description of the model	278
3.3.2.2. Properties	280
3.3.3. The fixed sample size model	282
3.3.3.1. Description of the model	282
3.3.3.2. Properties	283
Bibliography	286
Notation index	300
Author and subject index	301
