<i>Foreword</i>	xi
<i>Preface</i>	xiii

Chapter 1 Green's Functions and Systems Theory

1.1. Introduction: Some Remarks on the Mathematical Modeling of Dynamical Systems	1
1.2. Linearity and Superposition	2
1.3. The Concept of a Green's Function	4
1.4. Simple Input–Output Systems and Green's Functions	5
1.5. Operator Forms	6
1.6. Green's Function for the Inhomogeneous Sturm–Liouville Operator	7
1.7. Properties of the Green's Function	7
1.8. Evaluation of the Wronskian	14
1.9. Solution Using Abel's Formula	15
1.10. Use of Green's Function to Solve the Inhomogeneous Equation	18
1.11. Adjoint Operators	20
1.12. Green's Functions for Adjoint Operators	22
1.13. Symbolic Functions	24
1.14. Sturm–Liouville Differential Equation	31
1.15. Boundary Conditions Specified on a Finite Interval $[a, b]$	32
1.16. Series Expansions for $G(x, \xi)$	34
1.17. Multiple-Input–Multiple-Output Systems	35
1.18. Bilinear Form of the Green's Function	45
1.19. Bilinear Form of the Green's Function for the Sturm–Liouville Differential Equation	45
1.20. Cases Where the Green's Function Does Not Exist	47
1.21. Multidimensional Green's Functions	48
1.22. Green's Functions for Initial Conditions	51
1.23. Approximate Calculation of Green's Functions	52
References	56

Chapter 2 A Basic Review of the Theory of Stochastic Processes

2.1.	The Nature of a Stochastic Process	58
2.2.	Stochastic Processes—Basic Definitions	59
2.3.	Characterization and Classification of Stochastic Processes	61
2.4.	Consistency Conditions on the Distribution	61
2.5.	Some Simple Stochastic Processes	62
2.6.	Time Dependences of Distributions	64
2.7.	Statistical Measures of Stochastic Processes	66
2.8.	Random Fields	72
2.9.	The Calculus of Stochastic Processes	73
2.10.	Expansions of Random Functions	75
2.11.	Ergodic Theorems	77
2.12.	Generalized Random Processes	79
	References	80

Chapter 3 Stochastic Operators and Stochastic Systems

3.1.	Stochastic Systems—Basic Concepts	82
3.2.	Stochastic Green's Functions	84
3.3.	Statistical Operators	88
3.4.	Stochastic Green's Theorem	89
3.5.	Determination of the Kernel from the Physical Process	93
	References	94

Chapter 4 Linear Stochastic Differential Equations

4.1.	Stochastic Differential Operators	96
4.2.	The Differential Equation Formulation	99
4.3.	Derivation of Stochastic Green's Theorem	101
4.4.	Hierarchy or Averaging Method	103
4.5.	Perturbation Theory	109
4.6.	Connection between Perturbation Theory and the Hierarchy Method	112
4.7.	The Decomposition Method	119
4.8.	Differential Operator with One Random Coefficient	124
4.9.	A Convenient Resolvent Kernel Formulation	133
4.10.	Inverse Operator Form of the Decomposition Method Solution	134
4.11.	Some Further Remarks on the Operator Identity (4.10.1)	136
4.12.	General Form of the Stochastic Green's Function	137
4.13.	Random Initial Conditions	138
4.14.	Simplifying Green's Function Calculations for Higher Order Equations	148
	References	149

Chapter 5 Nonlinear Stochastic Differential Equations

5.1.	Generalization of the Decomposition Method to the Nonlinear Case	152
5.2.	Symmetrized Solutions	161
5.3.	Inverse Operator Method in the Nonlinear Case	170

5.4.	Operator-Theoretic Solution for General Nonlinear Stochastic Systems	174
5.5.	Product Nonlinearities	183
	References	185

Chapter 6 Successive Improvements

6.1.	Corrected Approximate Solution for the Linear and Nonlinear Cases	186
6.2.	Error in the Approximate Mean Solution	194
	References	200

Chapter 7 Computational Aspects and a General Method

7.1.	A Comparison of the Inverse Method and the Symmetrized Method	201
7.2.	Numerical Comparisons of Decomposition Solutions with Perturbation and Hierarchy Solutions	205
7.3.	Quadrature Method	209
7.4.	Simulation	213
7.5.	A General Method	213
	References	224

Chapter 8 The Deterministic Limit of Stochastic Theory

8.1.	Numerical Solution of Differential Equations	225
8.2.	A Comparison of the Decomposition Method and Picard's Approximations	230
	References	242

Chapter 9 Comparisons and Relations

9.1.	The Itô Equation	243
9.2.	Canonical Expansions and the Itô Equation	245
9.3.	General Expressions for the Stochastic Green's Function and the Perturbation Limit	247
	References	256

Chapter 10 Stochastic Partial Differential Equations

10.1.	The Linear Deterministic Case	257
10.2.	Linear Stochastic Partial Differential Equations	260
10.3.	Nonlinear Partial Differential Equations	263
	References	269

Chapter 11 Analytical Foundations of Stochastic Operator Equations

11.1.	Introduction	271
11.2.	Mathematical Description of Stochastic Processes	272

11.3.	Statistical Measures	272
11.4.	Statistical Independence of Stochastic Processes	275
11.5.	Stationarity Concepts	276
11.6.	Ergodicity	278
11.7.	Analytic Expressions for the Probability Density Functions	280
11.8.	Stochastic Differential Equations	292
11.9.	Abstract Structure	298
11.10.	Existence and Uniqueness of Statistical Measures and Existence of the Inverse Operator	300
	References	303

Chapter 12 Applications

12.1.	The Stochastic Riccati Equation	305
12.2.	On the Control of Stochastic Systems	307
12.3.	The n -Compartment Stochastic Model in Biology and Medicine	315
12.4.	Signal Processing and Filtering	316
12.5.	The Random Harmonic Oscillator	318
12.6.	Second-Order Differential Equations with One Random Coefficient	318
12.7.	General Linear Operator with One Random Coefficient	321
12.8.	An RC Circuit with Random Capacitance	321
12.9.	On Stochastic Transport Equations	322
12.10.	Random Wave Propagation	323
	References	323

Supplementary References	325
