PREFACE	ix
General Introduction	1
Chapter I. Preliminaries and Formulation of the Stochastic Equations	
1.0 Introduction	6
1.1 Basic Definitions and Theorems from Functional Analysis	7
1.2 Probabilistic Definitions	12
1.3 The Stochastic Integral Equations and Stochastic Differential Systems	18
Appendix 1.A	22
Chapter II. Some Random Integral Equations of the Volterra Type with Applications	
2.0 Introduction	29
2.1 The Random Integral Equation	30
2.1.1 Existence and Uniqueness of a Random Solution	30
2.1.2 Some Special Cases	33
2.1.3 Asymptotic Stability of the Random Solution	38
2.2 Some Applications of the Equation	39
2.2.1 Generalization of Poincaré–Lyapunov Stability Theorem	40
2.2.2 A Problem in Telephone Traffic Theory	42
2.2.3 A Stochastic Integral Equation in Hereditary Mechanics	46

2.3	The Random Integral Equation	49
2.4	Applications of the Integral Equation	55
2.4.1	A Stochastic Integral Equation in Turbulence Theory	55
2.4.2	Stochastic Models for Chemotherapy	57

Chapter III. **Approximate Solution of the Random Volterra Integral Equation and an Application to Population Growth Modeling**

3.0	Introduction	65
3.1	The Method of Successive Approximations	66
3.1.1	Convergence of the Successive Approximations	68
3.1.2	Rate of Convergence and Error of Approximation	71
3.1.3	Combined Error of Approximation and Numerical Integration	74
3.2	A New Stochastic Formulation of a Population Growth Problem	78
3.2.1	The Deterministic Model	79
3.2.2	The Stochastic Model	81
3.2.3	Existence and Uniqueness of a Random Solution	84
3.3	Method of Stochastic Approximation	87
3.3.1	A Stochastic Approximation Procedure	87
3.3.2	Solution of Eq. (3.0.1) by Stochastic Approximation	89
3.3.3	Numerical Solution for a Hypothetical Population	94

Chapter IV. **A Stochastic Integral Equation of the Fredholm Type and Some Applications**

4.0	Introduction	97
4.1	Existence and Uniqueness of a Random Solution	98
4.2	Some Special Cases	110
4.3	Stochastic Asymptotic Stability of the Random Solution	113
4.4	An Application in Stochastic Control Systems	115
4.5	A Random Perturbed Fredholm Integral Equation	120

Chapter V. **Random Discrete Fredholm and Volterra Systems**

5.0	Introduction	132
5.1	Existence and Uniqueness of a Random Solution of System (5.0.1)	133
5.2	Special Cases of Theorem 5.1.2	136
5.3	Stochastic Stability of the Random Solution	139
5.4	An Approximation to System (5.0.1)	141
5.5	Application to Stochastic Control Systems	148
5.5.1	A Discrete Stochastic System	148
5.5.2	Another Discrete Stochastic System	152

Chapter VI. **Nonlinear Perturbed Random Integral Equations and Application to Biological Systems**

6.0	Introduction	156
6.1	The Random Integral Equation	157
6.1.1	Existence and Uniqueness of a Random Solution	157
6.1.2	Some Special Cases	159
6.2	Applications to Biological Systems	165
6.2.1	A Random Integral Equation in a Metabolizing System	165
6.2.2	A Stochastic Physiological Model	170
6.2.3	A Stochastic Model for Communicable Disease	176

Chapter VII. **On a Nonlinear Random Integral Equation with Application to Stochastic Chemical Kinetics**

7.0	Introduction	180
7.1	Mathematical Preliminaries	181
7.2	An Existence and Uniqueness Theorem	194
7.3	A Stochastic Chemical Kinetics Model	197
7.3.1	The Concept of Chemical Kinetics	198
7.3.2	Stochastic Interpretation of the Rate of Reaction	201
7.3.3	Rate Functions of General Reaction Systems	201
7.3.4	A Stochastic Integral Equation Arising in Chemical Kinetics	204

Chapter VIII. **Stochastic Integral Equations of the Ito Type**

8.0	Introduction	207
8.1	Preliminary Remarks	208
8.2	On an Ito Stochastic Integral Equation	212
8.3	On Ito-Doob-Type Stochastic Integral Equations	214
8.3.1	An Existence Theorem	215

Chapter IX. **Stochastic Nonlinear Differential Systems**

9.0	Introduction	217
9.1	Reduction of the Stochastic Differential Systems	219
9.1.1	Stochastic System (9.0.1)–(9.0.2)	219
9.1.2	The Random Differential System (9.0.3)–(9.0.4)	220
9.1.3	The Stochastic System (9.0.5)–(9.0.6)	221
9.1.4	The Random Differential System (9.0.7)–(9.0.8)	222
9.2	Stochastic Absolute Stability of the Differential Systems	225
	Appendix 9.A	239
9.A.1	Stochastic Differential System (9.0.1)–(9.0.2)	239
9.A.2	Stochastic Differential System (9.0.3)–(9.0.4)	240
9.A.3	The Reduced Stochastic Integral Form of Systems (9.0.1)–(9.0.2) and (9.0.3)	240

Chapter X. Stochastic Integrodifferential Systems

10.0	Introduction	241
10.1	The Stochastic Integrodifferential Equation	243
10.1.1	Asymptotic Behavior of the Random Solution	247
10.1.2	Application to a Stochastic Differential System	250
10.2	Reduction of the Stochastic Nonlinear Integrodifferential Systems with Time Lag	251
10.2.1	The Integrodifferential System (10.0.2)–(10.0.3)	251
10.2.2	The Random Integrodifferential System (10.0.4)–(10.0.5)	253
10.3	Stochastic Absolute Stability of the Systems	255
	Bibliography	260
	INDEX	275
