INTRODUCTION.....	1
CHAPTER 1. STOCHASTIC PROCESSES AND STOCHASTIC SEQUENCES.....	8
§1. Preliminaries: Commutative C^* -algebras.....	8
1.1. C^* -algebras.....	8
1.2. E-algebras.....	11
§2. Preliminaries: Stationary Stochastic Processes...	14
2.1. One-sided and Two-sided Processes.....	14
2.2. The Sample Paths of a Process.....	18
2.3. Subprocesses.....	20
2.4. Ergodicity.....	21
§3. Stochastic Sequences.....	23
3.1. Definitions.....	23
3.2. Distribution Functions of Stochastic Sequences.....	24
3.3. Examples.....	26
§4. The Process Associated with a Stochastic Sequence	27
4.1. The Abstract Process of a Stochastic Sequence.....	27
4.2. The Process $X(\xi)$	29
4.3. Examples.....	32
§5. Regular Sequences.....	33
5.1. Definitions.....	33
5.2. Existence of Regular Sequences.....	37
5.3. Generic Points.....	38
§6. Examples.....	41
6.1. The Almost Periodic Case.....	41
6.2. The Random Case.....	42
6.3. Operations on Regular Sequences.....	42
§7. Ergodic Properties of Regular Sequences.....	44
7.1. Criteria for Ergodicity.....	44
7.2. Examples.....	53
CHAPTER 2. THE PREDICTION PROBLEMS FOR SEQUENCES.....	56
§8. The Support of the Prediction Measure.....	56
8.1. L-sequences.....	56
8.2. Littlewood's Theorem.....	59
§9. Deterministic Sequences.....	60
9.1. Definition.....	60
9.2. Construction of Deterministic Sequences...	61
§10. Prediction Measures and Continuous Predictability	63
10.1. Prediction Measures.....	63
10.2. Preliminary Lemmas.....	65
10.3. A Criterion for Continuous Predictability.	68
10.4. Continuous Predictability at Every Point..	69
10.5. Composition of Prediction Measures.....	70
10.6. Realization of Prediction Measures.....	72
CHAPTER 3. EXAMPLES AND COUNTEREXAMPLES.....	75
§11. Random and Markoff Sequences.....	75

	Page
11.1. Preliminaries.....	75
11.2. Continuous Predictability of Random, Markoff, and M-Markoff Sequences.....	76
§12. A Non-Continuously Predictable Sequence.....	78
12.1. Construction of the Sequence.....	78
12.2. Application of the Prediction Procedure...	80
12.3. Another Form of the Sequence.....	81
§13. A Class of Deterministic Sequences.....	82
13.1. \mathcal{D} -Sequences.....	82
CHAPTER 4. SUBPROCESSES OF MARKOFF PROCESSES.....	88
§14. Automorphism Groups.....	88
14.1. Definitions.....	88
14.2. An Illustration.....	91
§15. Linear Transformations of Cones.....	91
15.1. The Projective Metric.....	91
15.2. Projectively Bounded Transformations.....	93
§16. A Sufficient Condition for Continuous Predictability.....	95
16.1. Automorphisms and Their Adjoints.....	95
16.2. Construction of the Prediction Measures...	100
§17. Normality and Continuous Predictability.....	102
17.1. Reduction to Markoff Processes.....	102
17.2. Consequences of Normality.....	103
17.3. An Example.....	108
CHAPTER 5. STOCHASTIC SEMIGROUPS AND CONTINUOUS PREDICTABILITY...	110
§18. Stochastic Semigroups.....	110
18.1. Definitions.....	110
18.2. Ergodicity of X and $\mathcal{S}(X)$	112
18.3. Application to Symmetric Processes.....	113
§19. Realization of Stochastic Semigroups.....	114
19.1. Linear Semigroups.....	114
19.2. Examples.....	115
19.3. Further Examples.....	121
§20. Continuous Predictability for the Processes of Stochastic Semigroups.....	122
20.1. A Criterion for Continuous Predictability.	122
20.2. The Linear Case.....	125
20.3. Applications.....	127
CHAPTER 6. STATISTICAL PREDICTABILITY.....	130
§21. The Continuously Predictable Cover of a Process..	130
21.1. Definitions.....	130
§22. Statistical Predictability.....	132
22.1. Statistical Determination.....	132
22.2. Properties of Statistical Determination...	134
22.3. Statistical Predictability.....	136
§23. The Continuously Predictable Cover of a Finitely Valued Process.....	138
23.1. An Identity for Prediction Measures.....	138
23.2. Construction of Ω_X^{\sim}	140
§24. Applications to Finite Dimensional Processes.....	145

	Page
24.1. The Canonical Semigroup.....	145
24.2. The Sample Space $\Omega_{\bar{X}}$	147
CHAPTER 7. INDUCTIVE FUNCTIONS.....	152
§25. Inductive Functions; An Example.....	153
25.1. Preliminaries.....	153
25.2. The Equation $z_{n+1} = x_{n+1} + z_n$. Examples.	158
25.3. A Condition for Regularity.....	160
25.4. Existence of Representative Sequences.....	164
§26. Group-Valued Inductive Functions.....	165
26.1. The Equation $z_{n+1} = x_{n+1}z_n$	165
26.2. Applications to Equidistribution.....	171
§27. Periodic Subsequences of Regular Sequences.....	172
27.1. Connection with Inductive Functions.....	172
27.2. Regularity of σ -Sequences.....	175
27.3. Existence of Fourier Coefficients.....	178
CHAPTER 8. INDUCTIVE FUNCTIONS AND MARKOFF PROCESSES.....	181
§28. Inductive Functions of Markoff Processes.....	181
28.1. Preliminaries.....	181
28.2. A Counterexample.....	185
28.3. A Law of Large Numbers for Markoff Processes.....	186
28.4. Compact Inductive Functions of Random Processes.....	192
28.5. Compact Inductive Functions of Markoff Processes.....	196
§29. Compact Inductive Functions of Markoff Sequences.	199
29.1. Uniqueness of Inductive Functions.....	199
29.2. Application to Markoff Sequences.....	202
CHAPTER 9. PROJECTIVE INDUCTIVE FUNCTIONS AND PREDICTION.....	207
§30. Projective Inductive Functions.....	207
30.1. Notation.....	207
30.2. Preliminary Lemmas.....	210
30.3. Projective Inductive Functions of a Markoff Process.....	214
30.4. The Range of a Projective Inductive Function.....	226
§31. Projective Inductive Functions of Markoff Sequences.....	228
31.1. Statement of the Problem.....	228
31.2. A Reformulation.....	230
31.3. A Sufficient Condition.....	232
31.4. A Further Sufficient Condition.....	239
§32. Adjoint Processes.....	241
32.1. Conditional Distributions.....	241
32.2. The Fundamental Lemma.....	242
32.3. Restricted Solution to the Problem.....	252
32.4. The Remaining Alternative.....	260
32.5. Some Remarks.....	274

§33. Application to Statistical Predictability.....	277
33.1. Résumé.....	277
33.2. Application of Theorem 32.1.....	278
33.3. Uniqueness.....	280

BIBLIOGRAPHY.....	282
