

CONTENTS

Chapter 1	INTRODUCTION	1
	Recommended Reading	6
Chapter 2	STOCHASTIC PROCESSES: DESCRIPTION AND DEFINITION	7
2.1	Description	7
2.2	Probability Distributions	10
2.3	Markov Processes and Renewal Processes	11
2.4	Some Common Stochastic Processes	13
	References	17
	Recommended Reading	17
Chapter 3	THE TWO-STATE MARKOV PROCESS	18
3.1	Two-State Markov Chains	18
3.2	Two-State Markov Processes	32
3.3	Statistical Inference	41
	References	48
	Recommended Reading	48
	Exercises	49
Chapter 4	MARKOV CHAINS: CLASSIFICATION OF STATES	52
4.1	Some Examples	52
4.2	The n -Step Transition Probability Matrix	55
4.3	Classification of States	57
4.4	A Canonical Representation of the Transition Probability Matrix	64
	Reference	68
	Recommended and Advanced Reading	68
	Exercises	68

Chapter 5	FINITE MARKOV CHAINS	71
5.1	Finite Markov Chains with Recurrent and Transient States	71
5.2	Irreducible Finite Markov Chains with Ergodic States	81
5.3	Statistical Inference	96
	References	102
	Recommended Reading	103
	Exercises	103
Chapter 6	MARKOV CHAINS WITH COUNTABLY INFINITE STATES	108
6.1	Some Basic Relations	108
6.2	Some Limit Theorems	111
	Recommended and Advanced Reading	119
Chapter 7	SIMPLE MARKOV PROCESSES	121
7.1	Examples	121
7.2	The Poisson Process	123
7.3	Pure Birth Process	131
7.4	Pure Death Process	133
7.5	Birth and Death Process	135
7.6	Some General Properties of Markov Processes with Discrete States	138
7.7	Limiting Distributions	141
7.8	Statistical Inference	145
	Recommended and Advanced Reading	151
	Exercises	151
Chapter 8	RENEWAL PROCESSES	154
8.1	Introduction	154
8.2	Renewal Process When Time Is Discrete	155
8.3	Renewal Process When Time Is Continuous	164
8.4	Renewal Theory as an Analysis Technique	170
	References	171
	Recommended and Advanced Reading	172
	Exercises	172

Chapter 9	STATIONARY PROCESSES: SOME GENERAL PROPERTIES	174
9.1	Definition	174
9.2	Some Examples	178
9.3	Remarks	184
	References	185
	Recommended and Advanced Reading	185
Chapter 10	MARKOV DECISION PROCESSES	186
10.1	Introduction	186
10.2	Markovian Reward Processes	187
10.3	Markovian Reward Processes with Discounting	195
10.4	Choosing the Best Transition Probability Matrix	196
10.5	Systems with Markovian Deterioration	198
10.6	Remarks	201
	References	201
	Recommended and Advanced Reading	202
Chapter 11	CONGESTION PROCESSES	204
11.1	Queueing Processes	204
11.2	A Generalized Queueing Model	207
11.3	The Queue $M/M/1$	209
11.4	The Queue $M/M/s$	215
11.5	Some Variants of the Queueing Systems $M/M/1$ and $M/M/s$	224
11.6	Tandem Queues	230
11.7	The Queues $M/G/1$ and $GI/M/1$	232
11.8	The Machine Interference Problem	238
11.9	Inventory Problems	241
11.10	Some Traffic Flow Problems	242
	References	249
	Recommended Reading	250
Chapter 12	STOCHASTIC PROCESSES IN RELIABILITY THEORY	252
12.1	Introduction	252
12.2	General Failure Distribution for Components	253
12.3	Exponential Failure Distributions: General Model	257

12.4	Exponential Failure Distributions: Nonmaintained Systems	261
12.5	Exponential Failure Distributions: Maintained Systems	267
	References	274
Chapter 13	TIME SERIES ANALYSIS	276
13.1	Introduction	276
13.2	Stochastic Models for Time Series	277
13.3	Moving Averages	281
13.4	Exponential Smoothing	285
13.5	Autoregressive Model	287
	References	293
	Recommended Reading	294
Chapter 14	SOCIAL AND BEHAVIORAL PROCESSES	295
14.1	Introduction	295
14.2	Social Mobility	296
14.3	Industrial Mobility of Labor	302
14.4	Educational Advancement	308
14.5	Recovery, Relapse, and Death Due to Disease	312
14.6	Diffusion of Information	316
14.7	Remarks	318
	References	319
Chapter 15	SOME MARKOV MODELS IN BUSINESS AND SPORTS	321
15.1	Introduction	321
15.2	Consumer Behavior	321
15.3	Selecting a Portfolio of Credit Risks	324
15.4	Term Structure	324
15.5	Fencing	327
15.6	Remarks	331
	References	331
Appendix A	PROBABILITY AND PROBABILITY DISTRIBUTIONS	333
A.1	Definitions	333
A.2	Algebra of Events	334

A.3	Probability of Events	336
A.4	Conditional Probability	338
A.5	Independence of Events	339
A.6	Random Variables: Probability Distribution	342
A.7	Multivariate Distributions	345
A.8	Functions of a Random Variable	347
A.9	Sums of Random Variables	348
A.10	Expected Values and Moments	349
A.11	Characteristic and Moment-Generating Functions	352
A.12	Some Standard Probability Distributions	353
A.13	Basic Limit Theorems	360
	Recommended Reading	363
Appendix B	SAMPLING STATISTICS AND STATISTICAL INFERENCE	364
B.1	Sampling Statistics	364
B.2	Sampling Distributions	366
B.3	Estimation	368
B.4	Tests of Hypotheses	373
B.5	Regression Analysis and the Method of Least Squares	380
B.6	Remarks	382
	Recommended Reading	382
Appendix C	SOME FUNDAMENTALS OF MATRIX THEORY	384
C.1	Introduction	384
C.2	Matrix Operations	384
C.3	Determinants	386
C.4	Adjoint and Inverse	387
C.5	Partitioning	389
C.6	System of Linear Equations	390
C.7	Vector Space	390
C.8	Eigenvalues and Eigenvectors	392
C.9	Similar Matrices	393
	Recommended Reading	396
Appendix D	MISCELLANEOUS TOPICS	397
D.1	Riemann–Stieltjes Integral	397
D.2	Laplace Transforms	398

D.3	Generating Functions	400
D.4	A Lemma from Number Theory	401
D.5	Fubini-Tonelli Theorem and Lebesgue Convergence Theorem	403
D.6	Partial Fraction Expansions	404
	References	404
	AUTHOR INDEX	407
	SUBJECT INDEX	410
