PREFACE

vii

Chapter 1 L^2 Stochastic Processes

1.1	Introduction	1
1.2	Covariance Functions	14
1.3	Second Order Calculus	30
1.4	Karhunen–Loève Expansion	37
1.5	Estimation Problems	43
1.6	Notes	49

Chapter 2 Spectral Theory and Prediction

2.1	Introduction; L^2 Stochastic Integrals	50
2.2	Decomposition of Stationary Processes	57
2.3	Examples of Discrete Parameter Processes	69
2.4	Discrete Parameter Prediction: Special Cases	77
2.5	Discrete Parameter Prediction: General Solution	81
2.6	Examples of Continuous Parameter Processes	88
2.7	Continuous Parameter Prediction in Special Cases; Yaglom's Method	97
2.8	Some Stochastic Differential Equations	104
2.9	Continuous Parameter Prediction: Remarks on the General Solution	111
2.10	Notes	112

Chapter 3 Ergodic Theory

3.1	Introduction	113
3.2	Ergodicity and Mixing	117
3.3	The Pointwise Ergodic Theorem	124
3.4	Applications to Real Analysis	136
3.5	Applications to Markov Chains	141
3.6	The Shannon–McMillan Theorem	148
3.7	Notes	159

Chapter 4 Sample Function Analysis of Continuous Parameter Stochastic Processes

4.1	Separability	161
4.2	Measurability	169
4.3	One-Dimensional Brownian Motion	175
4.4	Law of the Iterated Logarithm	181
4.5	Markov Processes	186
4.6	Processes with Independent Increments	195
4.7	Continuous Parameter Martingales	200
4.8	The Strong Markov Property	205
4.9	Notes	209

Chapter 5 The Itô Integral and Stochastic Differential Equations

5.1	Definition of the Itô Integral	210
5.2	Existence and Uniqueness Theorems for Stochastic Differential Equations	219
5.3	Stochastic Differentials: A Chain Rule	226
5.4	Notes	233

Appendix 1 Some Results from Complex Analysis 234**Appendix 2 Fourier Transforms on the Real Line** 242**References** 248**Solutions to Problems** 250
