

Contents of volume I

Introduction	1
Chapter 1	
Essentials of probability theory and mathematical statistics	11
1.1 Main concepts of probability theory	11
1.2 Random processes: basic notions	20
1.3 Markov times	25
1.4 Brownian motion processes	30
1.5 Some notions from mathematical statistics	33
Notes and references	36
Chapter 2	
Martingales and semimartingales: discrete time	37
2.1 Semimartingales on the finite time interval	37
2.2 Semimartingales on an infinite time interval, and the theorem of convergence	43
2.3 Regular martingales: Levy's theorem	45
2.4 Invariance of the supermartingale property for Markov times: Riesz and Doob decompositions	48
Notes and references	54
Chapter 3	
Martingales and semimartingales: continuous time	55
3.1 Right continuous semimartingales	55
3.2 Basic inequalities, the theorem of convergence, and invariance of the supermartingale property for Markov times	58

3.3	Doob–Meyer decomposition for supermartingales	62
3.4	Some properties of natural increasing processes	71
	Notes and references	81

Chapter 4

	The Wiener process, the stochastic integral over the Wiener process, and stochastic differential equations	82
4.1	The Wiener process as a square integrable martingale	82
4.2	Stochastic integrals: Ito processes	88
4.3	Ito’s formula	118
4.4	Strong and weak solutions of stochastic differential equations	126
	Notes and references	151

Chapter 5

	Square integrable martingales, and structure of the functionals on a Wiener process	152
5.1	Doob–Meyer decomposition for square integrable martingales	152
5.2	Representation of square integrable martingales	160
5.3	The structure of functionals of a Wiener process	164
5.4	Stochastic integrals over square integrable martingales	172
5.5	Integral representations of the martingales which are conditional expectations, and the Fubini theorem for stochastic integrals	182
5.6	The structure of the functionals from processes of the diffusion type	188
	Notes and references	206

Chapter 6

	Nonnegative supermartingales and martingales, and the Girsanov theorem	207
6.1	Nonnegative supermartingales	207
6.2	Nonnegative martingales	216
6.3	The Girsanov theorem and its generalization	225
	Notes and references	235

Chapter 7

	Absolute continuity of measures corresponding to the Ito processes and processes of the diffusion type	236
7.1	The Ito processes, and the absolute continuity of their measures with respect to Wiener measure	236
7.2	Processes of the diffusion type: the absolute continuity of their measures with respect to Wiener measure	241

7.3	The structure of processes whose measure is absolutely continuous with respect to Wiener measure	255
7.4	Representation of the Ito processes as processes of the diffusion type, innovation processes, and the structure of functionals on the Ito process	257
7.5	The case of Gaussian processes	263
7.6	The absolute continuity of measures of the Ito processes with respect to measures corresponding to processes of the diffusion type	269
7.7	The Cameron–Martin formula	280
7.8	The Rao–Cramer–Wolfowitz inequality	282
7.9	An abstract version of the Bayes formula	285
	Notes and references	296
Chapter 8		
	General equations of optimal nonlinear filtering, interpolation and extrapolation of partially observable random processes	297
8.1	Filtering: the main theorem	297
8.2	Filtering: proof of the main theorem	299
8.3	Filtering of diffusion Markov processes	306
8.4	Equations of optimal nonlinear interpolation	309
8.5	Equations of optimal nonlinear extrapolation	311
8.6	Stochastic differential equations with partial derivatives for the conditional density (the case of diffusion Markov processes)	314
	Notes and references	328
Chapter 9		
	Optimal filtering, interpolation and extrapolation of Markov processes with a countable number of states	329
9.1	Equations of optimal nonlinear filtering	329
9.2	Forward and backward equations of optimal nonlinear interpolation	341
9.3	Equations of optimal nonlinear extrapolation	345
9.4	Examples	348
	Notes and references	350
Chapter 10		
	Optimal linear nonstationary filtering	351
10.1	The Kalman–Bucy method	351
10.2	Martingale proof of the equations of linear nonstationary filtering	364

Contents

10.3	Equations of linear nonstationary filtering: the multi-dimensional case	367
10.4	Equations for an almost optimal linear filter for singular $B \circ B$	375
	Notes and references	380
	Bibliography	381
	Index	391
