

Contents of volume II

Chapter 11

Conditionally Gaussian processes	1
11.1 Assumptions and formulation of the theorem of conditional Gaussian behavior	1
11.2 Auxiliary lemmas	3
11.3 Proof of the theorem of conditional Gaussian behavior	9
Notes and references	15

Chapter 12

Optimal nonlinear filtering: interpolation and extrapolation of components of conditionally Gaussian processes	16
12.1 Optimal filtering equations	16
12.2 Uniqueness of solutions of filtering equations: equivalence of σ -algebras \mathcal{F}_t^{ξ} and $\mathcal{F}_t^{\xi_0, \bar{w}}$	24
12.3 Optimal filtering equations in several dimensions	30
12.4 Interpolation of conditionally Gaussian processes	35
12.5 Optimal extrapolation equations	45
Notes and references	49

Chapter 13

Conditionally Gaussian sequences: filtering and related problems	50
13.1 Theorem on normal correlation	50
13.2 Recursive filtering equations for conditionally Gaussian sequences	61

13.3	Forward and backward interpolation equations	70
13.4	Recursive equations of optimal extrapolation	81
13.5	Examples	84
	Notes and references	89

Chapter 14

	Application of filtering equations to problems of statistics of random sequences	90
14.1	Optimal linear filtering of stationary sequences with rational spectra	90
14.2	Maximum likelihood estimates for coefficients of linear regression	98
14.3	A control problem with incomplete data (linear system with quadratic performance index)	103
14.4	Asymptotic properties of the optimal linear filter	110
14.5	Recursive computation of the best approximate solutions (pseudosolutions) of linear algebraic systems	121
	Notes and references	127

Chapter 15

	Linear estimation of random processes	128
15.1	Wide-sense Wiener processes	128
15.2	Optimal linear filtering for some classes of nonstationary processes	139
15.3	Linear estimation of wide-sense stationary random processes with rational spectra	144
15.4	Comparison of optimal linear and nonlinear estimates	152
	Notes and references	158

Chapter 16

	Application of optimal nonlinear filtering equations to some problems in control theory and information theory	159
16.1	An optimal control problem using incomplete data	159
16.2	Asymptotic properties of Kalman–Bucy filters	166
16.3	Computation of mutual information and channel capacity of a Gaussian channel with feedback	172
16.4	Optimal coding and decoding for transmission of a Gaussian signal through a channel with noiseless feedback	177
	Notes and references	195

Chapter 17

Parameter estimation and testing of statistical hypotheses for diffusion type processes	196
17.1 Maximum likelihood method for coefficients of linear regression	196
17.2 Parameter estimation of the drift coefficient for diffusion type processes	202
17.3 Parameter estimation of the drift coefficient for one-dimensional Gaussian process	206
17.4 Two-dimensional Gaussian Markov processes: parameter estimation	212
17.5 Sequential maximum likelihood estimates	219
17.6 Sequential testing of two simple hypotheses for Ito processes	224
17.7 Some applications to stochastic approximation	231
Notes and references	235

Chapter 18

Random point processes: Stieltjes stochastic integrals	236
18.1 Point processes and their compensators	236
18.2 Minimal representation of a point process: processes of the Poisson type	244
18.3 Construction of point processes with given compensators: theorems on existence and uniqueness	252
18.4 Stieltjes stochastic integrals	260
18.5 The structure of point processes with deterministic and continuous compensators	278
Notes and references	281

Chapter 19

The structure of local martingales, absolute continuity of measures for point processes, and filtering	282
19.1 The structure of local martingales	282
19.2 Nonnegative supermartingales: analog of a Girsanov's theorem	288
19.3 Optimal filtering from the observations of point processes	297
19.4 The necessary and sufficient conditions for absolute continuity of the measures corresponding to point processes	308
19.5 Calculation of the mutual information and the Rao–Cramer–Wolfowitz inequality (the point observations)	317
Notes and references	325
