

## CONTENTS

### CHAPTER 1: CERTAIN FACTS FROM THE THEORY OF RANDOM PROCESSES

1. Basic definitions associated with the concept of a random process . . . . .	1
2. Conditional probabilities and mathematical expectations . . . . .	4
3. Processes with independent increments . . . . .	5
4. Markov processes . . . . .	7
5. Martingales . . . . .	8
6. A limit theorem for random processes . . . . .	9

### CHAPTER 2: STOCHASTIC INTEGRALS

1. The definition of a stochastic integral with respect to a Brownian motion . . . . .	15
2. The stochastic integral with respect to a Brownian motion as a function of the upper limit . . . . .	20
3. The stochastic integral with respect to a martingale . . . . .	29
4. Stochastic integrals with respect to certain random measures . . . . .	34

### CHAPTER 3: MARKOV PROCESSES AND STOCHASTIC EQUATIONS

1. The form of stochastic equations for Markov processes . . . . .	42
2. Existence and uniqueness of the solution to stochastic equations . . . . .	46
3. Existence and uniqueness of the solution to stochastic equations (continued) . . . . .	56
4. The solutions of stochastic equations as Markov processes . . . . .	73
5. The dependence of the solutions of stochastic equations on initial conditions . . . . .	83
6. Differential equations defining the distributions of Markov processes . . . . .	93

### CHAPTER 4: DIFFERENTIABILITY OF MEASURES CORRESPONDING TO MARKOV PROCESSES

1. Statement of the problem . . . . .	97
2. Lemmas . . . . .	98
3. Some sufficient conditions for the absolute continuity of measures corresponding to homogeneous processes with independent increments . . . . .	102
4. The absolute continuity of measures corresponding to Markov processes . . . . .	113

### CHAPTER 5: ONE-DIMENSIONAL DIFFUSION PROCESSES

1. Preliminary remarks . . . . .	120
2. The absolute continuity of measures corresponding to diffusion processes . . . . .	122
3. A comparison theorem for diffusion processes . . . . .	124

4. A theorem on the uniqueness of the solution of a stochastic equation for diffusion processes . . . . .	129
CHAPTER 6: THE LIMITING TRANSITION FROM A MARKOV CHAIN TO A MARKOV PROCESS WITH CONTINUOUS TIME	
1. Statement of the problem . . . . .	131
2. A type of convergence of functions without discontinuities of the second kind . . . . .	132
3. A limit theorem for $\mathbf{J}$ -continuous functionals . . . . .	137
4. Conditions for convergence of finite-dimensional distributions . . . . .	139
5. A limit theorem for the distributions of functionals of a sequence of Markov processes . . . . .	156
CHAPTER 7: SOME LIMIT THEOREMS FOR SUMS OF INDEPENDENT RANDOM VARIABLES	
1. Preliminary remarks . . . . .	162
2. The concept of a sequence of sums of independent random variables which are the images of a Brownian process . . . . .	163
3. The probability of determining a sequence of sums between two bounds . . . . .	169
4. The distribution of certain additive functionals of a sequence of sums of independent random variables . . . . .	179
SUPPLEMENTARY REMARKS . . . . .	186
BIBLIOGRAPHY . . . . .	190
INDEX . . . . .	198
