

Contents

	Preface	
I.	PRELIMINARY BACKGROUND	1
§1.	Introduction	1
§2.	Measure and Probability	1
§3.	Vector Measures and the Dunford-Schwartz Integral	8
§4.	Some Linear Analysis	11
§5.	Stochastic Processes and Random Fields	14
§6.	Martingales	16
§7.	Markov Processes	18
§8.	Examples:	21
	(A) Gaussian Fields	21
	(B) Brownian Motion	22
	(C) The Stochastic Integral	24
II.	EXISTENCE OF SOLUTIONS AND DEPENDENCE ON THE INITIAL PROCESS	30
§1.	Basic Setting and Assumptions	30
§2.	Existence and Uniqueness of Solutions	33
§3.	Dependence on the Initial Process	41
III.	MARKOV TRAJECTORIES	46
§1.	The Markov Property	46
§2.	Time-Homogeneity: Autonomous Stochastic FDE's	58
§3.	The Semigroup	66
IV.	THE INFINITESIMAL GENERATOR	70
§1.	Notation	70
§2.	Continuity of the Semigroup	71
§3.	The Weak Infinitesimal Generator	76
§4.	Action of the Generator on Quasi-tame Functions	97

V.	REGULARITY OF THE TRAJECTORY FIELD	113
§1.	Introduction	113
§2.	Stochastic FDE's with Ordinary Diffusion Coefficients	114
§3.	Delayed Diffusion: An Example of Erratic Behaviour	144
§4.	Regularity in Probability for Autonomous Systems	149
VI.	EXAMPLES	165
§1.	Introduction	165
§2.	Stochastic ODE's	165
§3.	Stochastic Delay Equations	167
§4.	Linear FDE's Forced by White Noise	191
VII.	FURTHER DEVELOPMENTS, PROBLEMS AND CONJECTURES	223
§1.	Introduction	223
§2.	A Model for Physical Brownian Motion	223
§3.	Stochastic FDE's with Discontinuous Initial Data	226
§4.	Stochastic Integro-Differential Equations	228
§5.	Infinite Delays	230
	REFERENCES	234
	INDEX	240
