CONTENTS

PREFACE	хi
Acknowledgments, xii	
INTRODUCTION	1
Organization of the Book, 4	
PRELIMINARIES: SET THEORY, MAPPINGS, AND LINEAR SYSTEMS	8
Set Theory, 8 Examples of proofs, 15	
Mappings and Functions, 18	
Linear System Fundamentals, 19	
Exercises, 23	
PROBABILITY SPACES	27
Sample Spaces, 33 Examples of sample spaces, 33	
Event Spaces, 36 Examples of event spaces, 40	
Probability Measures, 47 Examples of probability spaces, 50	
Exercises, 59	
	INTRODUCTION Organization of the Book, 4 PRELIMINARIES: SET THEORY, MAPPINGS, AND LINEAR SYSTEMS Set Theory, 8 Examples of proofs, 15 Mappings and Functions, 18 Linear System Fundamentals, 19 Exercises, 23 PROBABILITY SPACES Sample Spaces, 33 Examples of sample spaces, 33 Event Spaces, 36 Examples of event spaces, 40 Probability Measures, 47 Examples of probability spaces, 50

ļ	RANDOM VARIABLES, VECTORS, AND PROCESSES 64
	Examples of Random Variables, 65
	Random Variables, 70
	Distributions of Random Variables, 75
	Examples of Derived Distributions, 81
	Random Vectors, 84
	Marginal and Joint Distributions, 88
	Examples of Random Vectors, 94
	Independence, 95
	Elementary Conditional Probability 98,
	Random Processes, 99
	Simple Examples of Random Processes, 101
	Exercises, 105
_	
5	SPECIFICATION OF RANDOM PROCESSES 111
	Process Distributions, 112
	Examples of Specification, 120
	Exercises, 123
6	EXPECTATION AND LAWS OF LARGE NUMBERS 126
	Expectation, 130
	Examples, 131 Expectations of functions of random variables, 133
	Examples, 134
	Functions of Several Random Variables, 136
	Properties of Expectation, 137
	Correlation, 139
	Sample Averages, 143
	Convergence and Laws of Large Numbers, 145 Convergence with probability one vs. convergence in probability, 150
	Convergence in Distribution, 151
	Exercises, 152
7	STATIONARITY AND ERGODIC PROPERTIES 162
•	Stationarity, 163
	Examples of Stationary Processes, 166
	I.i.d. processes, 166 Gaussian processes, 167

Contents

The Shift, 168

8

9

Ergodic Theorems. 170 Two Mean Ergodic Theorems, 171 Ergodicity. 174 Exercises, 178 SECOND-ORDER MOMENTS AND LINEAR SYSTEMS 181 Linear Filtering of Random Processes. 182 Discrete Time Second-Order I/O Relations. 184 Linearly Filtered Uncorrelated Processes. 186 Continuous Time Linear Filters, 189 Linear Modulation. Power Spectral Densities, 192 White Noise, 197 Differentiating Random Processes, 200 Linear Estimation, 202 Exercises, 215 **USEFUL RANDOM PROCESSES** 224 Discrete Time Linear Models. Processes with Independent and Stationary Increments, 229 A Counting Process, 233 Derived Distributions of Sums of Independent Random Variables, 235 The Binomial Counting Process, A Discrete Random Walk, 238 The Discrete Time Wiener Process, 239 Conditional pmf's and Specification, 240 Specification of Discrete Independent Increment Processes, 242 Conditional pdf's and Specification, 244 Conditional Probability, 245 Specification of the Discrete Time Wiener Process. Second-order Moments of Continuous Time I.s.i. Processes, 249 Specification of Continuous Time I.s.i. Processes, 251 Moving-average and Autoregressive Processes, 254 The Discrete Time Gauss-Markov Process, 255

x Contents

Gaussian Random Processes, 256

Exponential Modulation, 258	
Exercises, 262	
COMPOUND PROCESSES AND CONDITIONAL EXPECTATION	268
Discrete Time Compound Processes, 269	
Conditional Expectation, 271	
An Application to Estimation Theory, 273	
Continuous Time Compound Processes, 274	
Exercises, 275	
MODELING PHYSICAL PROCESSES	277
The Central Limit Theorem, 278	
The Poisson Counting Process, 282	
Thermal Noise, 285	
Exercises, 287	
APPENDIX: SUPPLEMENTARY READING	290
References, 294	
INDEX	297
	COMPOUND PROCESSES AND CONDITIONAL EXPECTATION Discrete Time Compound Processes, 269 Conditional Expectation, 271 An Application to Estimation Theory, 273 Continuous Time Compound Processes, 274 Exercises, 275 MODELING PHYSICAL PROCESSES The Central Limit Theorem, 278 The Poisson Counting Process, 282 Thermal Noise, 285 Exercises, 287 APPENDIX: SUPPLEMENTARY READING References, 294
