

CONTENTS

Introduction	1
CHAPTER I	
Discrete Time Random Processes	3
1. Random Variables and Probability Spaces	3
2. Random Vectors	4
3. Random Processes	4
4. Second-Order Process	8
CHAPTER II	
Gaussian Processes	10
1. The Use (and Misuse) of Gaussian Models	10
2. Fourier Transform: A Few Basic Facts	11
3. Gaussian Random Vectors	12
4. Gaussian Processes	15
CHAPTER III	
Stationary Processes	18
1. Stationarity and Model Building	18
2. Strict Stationarity and Second-Order Stationarity	20
3. Construction of Strictly Stationary Processes	21
4. Ergodicity	22
5. Second-Order Stationarity: Processes with Countable Spectrum	24
CHAPTER IV	
Forecasting and Stationarity	25
1. Linear and Nonlinear Forecasting	25
2. Regular Processes and Singular Processes	26

3. Regular Stationary Processes and Innovation	28
4. Prediction Based on a Finite Number of Observations	31
5. Complements on Isometries	34
CHAPTER V	
Random Fields and Stochastic Integrals	37
1. Random Measures with Finite Support	37
2. Uncorrelated Random Fields	38
3. Stochastic Integrals	43
CHAPTER VI	
Spectral Representation of Stationary Processes	46
1. Processes with Finite Spectrum	46
2. Spectral Measures	47
3. Spectral Decomposition	50
CHAPTER VII	
Linear Filters	55
1. Often Used Linear Filters	55
2. Multiplication of a Random Field by a Function	57
3. Response Functions and Linear Filters	58
4. Applications to Linear Representations	62
5. Characterization of Linear Filters as Operators	64
CHAPTER VIII	
ARMA Processes and Processes with Rational Spectrum	67
1. ARMA Processes	67
2. Regular and Singular Parts of an ARMA Process	69
3. Construction of ARMA Processes	74
4. Processes with Rational Spectrum	76
5. Innovation for Processes with Rational Spectrum	81
CHAPTER IX	
Nonstationary ARMA Processes and Forecasting	83
1. Nonstationary ARMA Models	83
2. Linear Forecasting and Processes with Rational Spectrum	91
3. Time Inversion and Estimation of Past Observations	95
4. Forecasting and Nonstationary ARMA Processes	97
CHAPTER X	
Empirical Estimators and Periodograms	101
1. Empirical Estimation	101
2. Periodograms	103
3. Asymptotic Normality and Periodogram	107
4. Asymptotic Normality of Empirical Estimators	111
5. The Toeplitz Asymptotic Homomorphism	113

CHAPTER XI

Empirical Estimation of the Parameters for ARMA Processes with Rational Spectrum

1. Empirical Estimation and Efficient Estimation	118
2. Computation of the a_k and Yule-Walker Equations	119
3. Computation of the b_i and of σ^2	120
4. Empirical Estimation of the Parameters When p, q are Known	123
5. Characterization of p and q	125
6. Empirical Estimation of d for an ARIMA (p, d, q) Model	128
7. Empirical Estimation of (p, q)	131
8. Complement: A Direct Method of Computation for the b_k	135
9. The ARMA Models with Seasonal Effects	136
10. A Technical Result: Characterization of Minimal Recursive Identities	136
11. Empirical Estimation and Identification	138

CHAPTER XII

Efficient Estimation for the Parameters of a Process with Rational Spectrum

1. Maximum Likelihood	141
2. The Box-Jenkins Method to Compute (\tilde{a}, \tilde{b})	146
3. Computation of the Information Matrix	150
4. Convergence of the Backforecasting Algorithm	155

CHAPTER XIII

Asymptotic Maximum Likelihood

1. Approximate Log-Likelihood	162
2. Kullback Information	164
3. Convergence of Maximum Likelihood Estimators	167
4. Asymptotic Normality and Efficiency	169

CHAPTER XIV

Identification and Compensated Likelihood

1. Identification	181
2. Parametrization	182
3. Compensated Likelihood	184
4. Mathematical Study of Compensated Likelihood	185
5. Noninjective Parametrization	190
6. Almost Sure Bounds for the Maximal Log-Likelihood	193
7. Law of the Iterated Logarithm for the Periodogram	203

CHAPTER XV

A Few Problems not Studied Here

1. Tests of Fit for ARMA Models	223
2. Nonlinearity	225

Appendix
