CONTENTS

Series Editor's Preface v
Preface vii
Introduction xiii

A) THEORY

CHAPTER I. MATHEMATICAL PREREQUISITES 1

I.1. Linear Algebra 1
I.2. Transposition 2
I.3. Functional Analysis 8
I.4. Prerequisites from the Theory of Measure and Integration 8
I.5. Sobolev Spaces 19

CHAPTER II. PRINCIPLES OF PROBABILITY THEORY 21

II.1. Principles of Probability Theory 21
II.2. Characteristic Functions. Moments 28
II.3. Common Probability Laws 34
II.4. Relation Between Probability Theory and Statistics 36
II.5. Effective Description of Probability Laws 38

CHAPTER III. STOCHASTIC PROCESSES AND RANDOM FIELDS 42

III.1. Classical Stochastic Processes 42
III.2. Processes of Second Order 46
III.3. Transformations of Stochastic Processes 56
III.4. Integral Representation of Classical Stochastic Processes of Second Order 60
III.5. Conditional Expectations and Applications to Processes 65
III.6. The Markovian Property 68
III.7. Statistics on Random Functions 72

CHAPTER IV. LINEAR FILTERING AND SPECTRAL ANALYSIS 76

IV.1. Linear Transformations of Signals 76
IV.2. Convolution Filters 81
IV.3. Finite-Dimensional Linear Oscillators 84
IV.4. Linear Integral Transformations of M.S. Continuous Second-Order Stochastic Processes 93
IV.5. Convolution Filtering of M.S. Continuous Second-Order Stationary Processes 95
IV.6. Stochastic Linear Oscillators 116

CHAPTER V. STATISTICS ON SAMPLE PATHS 119

V.1. Introduction 119
V.2. Processes with Absolutely Continuous Sample Paths 123
V.3. Polygonal Approximation of Sample Paths 125
V.4. Mean Number of Crossings for Almost All Levels 128
V.5. Mean Number of Crossings 130
V.6. Mean Number of Upcrossings (Downcrossings) 134
V.7. Relationship Between the Mean Number of Upcrossings and the Study of Absolute Maxima on an Interval 136
V.8. Mean Number of Local Maxima and Minima 141

B) APPLICATIONS

CHAPTER VI. DYNAMIC RESPONSE OF STRUCTURES SUBJECTED TO WIND LOADS 146

VI.1. Brief Review of Fluid Mechanics 146
VI.2. Probabilistic Description of the Atmospheric Turbulent Boundary Layer 151
VI.3. Along-Wind Dynamic Response to Flexible Structures 164
VI.4. Experimental Verification of the Model 180

CHAPTER VII. PROBABILISTIC APPROACH TO THE EFFECTS OF EARTHQUAKES ON STRUCTURES 186

VII.1. General Facts 186
VII.2. Probabilistic Modelling of Strong-Motion Earthquakes 189
VII.3. Responses of Systems with Linear Behavior 195
VII.4. Response of Structures with Nonlinear Behavior 205
VII.5. Numerical Resolution of the Fokker-Planck Equation 216

CHAPTER VIII. PROBABILISTICS MODELS OF SEA WAVE AND APPLICATIONS 229

VIII.1. Statement of the Problem and Hypotheses 229
VIII.2. Prerequisites on the Deterministic Wave 230
VIII.3. Probabilistic Model of Short-Term Sea States 234
VIII.4. Application to the Study of the Response of a Certain Type of Offshore Structures 245

CHAPTER IX. MECHANICAL FATIGUE UNDER RANDOM LOADING 260

IX.1. General Facts Concerning Fatigue 260
IX.2. Various Notions of Cycles. Counting Methods 262
IX.3. Fatigue under Constant-Cycle Loading 267
IX.4. Fatigue under Loading with Constant Cycles on Intervals 272
IX.5. Fatigue under Random Loading 272

C) THEORETICAL COMPLEMENTS

CHAPTER X. MEASURES ON VECTOR SPACES AND STOCHASTIC MODELLING 282

X.1. Locally Convex Spaces 282
X.2. Duality for Locally Convex Spaces 285
X.3. Cylindrical Models and Models of Random Elements 287
X.4. Study of Certain σ-Algebras 293
X.5. Constructing Models 296
X.6. Linear Processes of Order p. 298
X.7. Stochastic Hilbert Space. Reproducing Hilbert Space 302
X.8. Weak Integrals 306

CHAPTER XI. GENERALIZED STOCHASTIC PROCESSES 308

XI.1. Random Vector Distributions 308
XI.2. Linear Transformations of Generalized Processes 312
XI.3. Spectral Theory of Generalized Processes 317
XI.4. Linear Equations 320
XI.5. Linear Oscillators with Arbitrarily Many Degrees of Freedom 325
XI.6. Stochastic Hilbert Spaces and Regularity of Generalized Processes 330

CHAPTER XII. MARKOV REALIZATION OF GAUSSIAN PROCESSES 333

XII.1. Physically Realizable Processes 333
XII.2. Markov Realization of Processes with Spectral Density of Rational Type 336
XII.3. Approximate Markov Realization of Physically Realizable Processes 339
XII.4. Filtering Techniques for Random Fields 343
XII.5. Application of Random Field Filtering to Approximate Markovianization 346

CHAPTER XIII. STOCHASTIC DIFFERENTIAL EQUATIONS 351

XIII.1. Stochastic Integrals 351
XIII.2. Indefinite Stochastic Integrals and Ito's Differential Calculus 355
XIII.3. Existence and Uniqueness of Solutions in the Uniform Lipschitz Case 359
XIII.4. Existence and Uniqueness of Solutions in other Cases 361
XIII.5. The Fokker-Planck Equation 365
XIII.6. Law of the First Exit from an Open Set 367
XIII.7. Markovianization of Some Stochastic Initial-Value Problems 371

CHAPTER XIV. RANDOM OSCILLATIONS WITH INTERMITTENT CONSTRAINTS 374

XIV.1. Deterministic Multivalued Differential Equations 374
XIV.2. Deterministic Oscillations with Intermittent Constraints 381
XIV.3. Multivalued Stochastic Differential Equations 384
XIV.4. The Diffusion Operator of (MSDE) 387

XIV.5. Diffusion Equation for the Probability Distributions for (MSDE) in the Product Situation 389
XIV.6. Multivalued Equations and Stochastic Differential Equations with Boundary Conditions 391
XIV.7. Generalized FPE for a (MSDE) of Product type 394

CHAPTER XV. LINEAR OSCILLATORS SUBJECTED TO SQUARED GAUSSIAN PROCESSES 401

XV.1. Existence Theorem for Reproducing Hilbert Spaces 401
XV.2. Fourier Transform of Images of Gaussian Measures under Certain Nonlinear Mappings 404
XV.3. Proof of the Topological Property XV.2.4.c 407
XV.4. Example of a Nonlinear Transformation of a Gaussian Measure 409
XV.5. An Approximation Procedure 412
