<u>PART 1: Stochastic Optimal Control Theory</u>	1
<u>Chapter 1: Introduction to Stochastic Optimal Control</u>	3
Summary	3
1.1 The origins of feedback control	3
1.2 Early developments in control theory	5
1.3 Analytical design methods	6
1.4 State-space optimal control	8
1.5 The polynomial equation approach	9
1.6 Contributions of the present work	10
<u>Chapter 2: Stochastic Tracking with Measurable Disturbance</u>	
Feedforward	15
Summary	15
2.1 Plant model	17
2.1.1 Stochastic signal definitions	22
2.1.2 Non-stationary and deterministic reference and disturbances	24
2.2 Control structures	26
2.2.1 Single-degree-of-freedom controller with feedforward	26
2.2.2 Two-degrees-of-freedom controller with feedforward	29
2.3 Optimal control problem definition	32
2.4 Single-degree-of-freedom solution with feedforward	33
2.4.1 Internal stability	40
2.4.2 Equation solvability	41
2.4.3 Zero output-measurement noise	45
2.5 Two-degrees-of-freedom solution with feedforward	48
2.5.1 Internal stability	55

2.5.2	Equation solvability	56
2.5.3	Zero output-measurement noise	59
2.6	SDF solution using a common denominator	62
2.6.1	Zero output-measurement noise	65
2.7	2DF solution using a common denominator	68
2.7.1	Zero output-measurement noise	72
2.8	Optimality of the implied diophantine equations:	
	SDF Case	75
2.8.1	Optimal cascade controller	77
2.8.2	Optimal feedforward controller	83
2.9	Optimality of the implied diophantine equations:	
	2DF Case	88
2.9.1	Optimal feedback controller	89
2.9.2	Optimal reference controller	92
2.9.3	Optimal feedforward controller	96
2.10	Properties and structure of the optimal solutions	99
2.11	Optimal regulation with disturbance measurement feedforward - the multivariable case	109
<u>PART 2: Self-Tuning Control</u>		117
<u>Chapter 3: Introduction to Self-Tuning Control</u>		119
	Summary	
3.1	Feedback control	119
3.2	Conventional control	123
3.3	Analytical design and adaptive control	125
3.4	System identification	129
3.5	Adaptive control - a brief history	137
3.6	The methods of adaptive control	139

3.7	Previous approaches to self-tuning control	147
3.8	Contributions of the present work	150
Chapter 4: Optimal Self-Tuning Algorithm		154
	Summary	154
4.1	Model structure	156
4.2	Controller design	159
	4.2.1 Optimal control law	161
	4.2.2 Implied diophantine equations	162
	4.2.3 Simplified design	166
4.3	LQG self-tuning control algorithm	169
4.4	Robustness of the LQG self-tuner	170
	4.4.1 Robustness of the LQG design	170
	4.4.2 Robust parameter estimation	173
4.5	Convergence properties	176
4.6	Practical issues	179
	4.6.1 Control law implementation	179
	4.6.2 Cost-function weight selection	181
	4.6.3 Solvability conditions and unstable weighting terms	182
	4.6.4 Computational algorithms	186
	4.6.5 Common factors in A and B	186
PART 3: Case Study		203
Chapter 5: A Power Systems Application		205
	Summary	205
5.1	The advanced gas-cooled reactor	206
5.2	The Hunterston 'B' overall control strategy	206
5.3	Hunterston 'B' simulator	210

5.4	TSVP control (Loop 3 (main))	213
	5.4.1 PI performance	213
5.5	Self-tuning LQG control	219
	5.5.1 Hardware and software	219
	5.5.2 Control law and model parameterisation	219
	5.5.3 Self-tuning LQG control results	221
5.6	Conclusions	239
<u>PART 4: Conclusions</u>		241
<u>Chapter 6: Conclusions</u>		243
6.1	Stochastic optimal control theory	243
6.2	LQG self-tuning control	244
