

TABLE OF CONTENTS

Preface	xv
1 Introduction	1
1.1 Overview	1
1.1.1 Organization	4
1.1.2 Notations	4
1.2 The Fourier transform	5
1.2.1 Differentiation theorem	5
1.2.2 Translation theorem	6
1.2.3 Parseval's theorem	6
1.2.4 Symmetry, change of scale, duality	6
1.2.5 Harmonic functions	7
1.3 Convolution, correlation	7
1.3.1 Convolution integral	7
1.3.2 Correlation integral	8
1.3.3 Example: The leakage	8
1.4 References	10
1.5 Problems	11
2 Random Variables	13
2.1 Axioms of probability theory	13
2.1.1 Bernoulli's law of large numbers	13
2.1.2 Alternative interpretation	13
2.1.3 Axioms	14
2.2 Theorems and definitions	15
2.3 Random variable	17
2.3.1 Discrete random variable	18
2.3.2 Continuous random variable	18
2.4 Jointly distributed random variables	20
2.5 Conditional distribution	21
2.6 Functions of Random variables	22
2.6.1 Function of one random variable	22
2.6.2 Function of two random variables	24
2.6.3 The sum of two independent random variables	25
2.6.4 Rayleigh distribution	25
2.6.5 n functions of n random variables	26
2.7 Moments	27

2.7.1	Expected value	27
2.7.2	Moments	27
2.7.3	Schwarz inequality	28
2.7.4	Chebyshev's inequality	29
2.8	Characteristic function, Cumulants	29
2.8.1	Single random variable	29
2.8.2	Jointly distributed random variables	31
2.9	References	32
2.10	Problems	32
3	Random Processes	35
3.1	Introduction	35
3.2	Specification of a random process	36
3.2.1	Probability density functions	36
3.2.2	Characteristic function	37
3.2.3	Moment functions	38
3.2.4	Cumulant functions	38
3.2.5	Characteristic functional	39
3.3	Stationary random process	40
3.4	Properties of the correlation functions	41
3.5	Differentiation	43
3.5.1	Convergence	43
3.5.2	Continuity	43
3.5.3	Stochastic differentiation	44
3.6	Stochastic integrals, Ergodicity	45
3.6.1	Integration	45
3.6.2	Temporal mean	46
3.6.3	Ergodicity theorem	47
3.7	Spectral decomposition	48
3.7.1	Fourier transform	48
3.7.2	Power spectral density	48
3.8	Examples	50
3.8.1	White noise	50
3.8.2	Ideal low-pass process	50
3.8.3	Process with exponential correlation	51
3.8.4	Construction of a random process with specified power spectral density	51
3.9	Cross power spectral density	52
3.10	Periodic process	53
3.11	References	54
3.12	Problems	55

4	Gaussian Process, Poisson Process	57
4.1	Gaussian random variable	57
4.2	The central limit theorem	58
4.2.1	Example 1	59
4.2.2	Example 2: Binomial distribution	60
4.3	Jointly Gaussian random variables	62
4.3.1	Remark	64
4.4	Gaussian random vector	64
4.5	Gaussian random process	66
4.6	Poisson process	67
4.6.1	Counting process	67
4.6.2	Uniform Poisson process	68
4.6.3	Non-uniform Poisson process	70
4.7	Random pulses	70
4.8	Shot noise	72
4.9	References	72
4.10	Problems	73
5	Random Response of a Single Degree of Freedom Oscillator	75
5.1	Response of a linear system	75
5.2	Single degree of freedom oscillator	76
5.3	Stationary response of a linear system	79
5.4	Stationary response of the linear oscillator. White noise approximation.	80
5.5	Transient response	82
5.5.1	Excitation applied from $t = 0$	82
5.5.2	Stationary excitation	83
5.6	Spectral moments	85
5.6.1	Definition	85
5.6.2	Computation for the linear oscillator	85
5.6.3	Rice formulae	88
5.7	Envelope of a narrow band process	90
5.7.1	Crandall & Mark's definition	90
5.7.2	Joint distribution of X and \dot{X}	91
5.7.3	Probability distribution of the envelope	91
5.8	References	92
5.9	Problems	92

6	Random Response of Multi Degree of Freedom Systems	94
6.1	Some concepts of structural dynamics	94
6.1.1	Equation of motion	94
6.1.2	Input-output relationship	95
6.1.3	Modal decomposition	95
6.1.4	State variable form	97
6.1.5	Structural and hereditary damping	98
6.1.6	Remarks	100
6.2	Seismic excitation	100
6.2.1	Equation of motion	100
6.2.2	Effective modal mass	102
6.2.3	Input-Output relationships in the frequency domain	104
6.3	Response to a stationary excitation	107
6.4	Role of the cross-correlation	108
6.5	Response to a stationary seismic excitation	112
6.6	Continuous structures	113
6.6.1	Input-Output relationship	113
6.6.2	Structure with normal modes	115
6.7	Co-spectrum	118
6.8	Example: Boundary layer noise	120
6.9	Discretization of the excitation	122
6.10	Along-wind response of a tall building	123
6.10.1	Along-wind aerodynamic forces	123
6.10.2	Mean wind	124
6.10.3	Spectrum at a point	124
6.10.4	Davenport spectrum	125
6.10.5	Example	126
6.11	Earthquake	128
6.11.1	Response spectrum	128
6.11.2	Cascade analysis	130
6.12	Remark on sound pressure level	131
6.13	References	132
6.14	Problems	133
7	Input-Output Relationship for Physical Systems	135
7.1	Estimation of frequency response functions	135
7.2	Coherence function	136
7.3	Effect of measurement noise	137
7.4	Example	139
7.5	Remark	141
7.6	References	141

8	Spectral Description of Non-stationary Random Processes	142
8.1	Introduction	142
8.1.1	Stationary random process	142
8.1.2	Non-stationary random process	143
8.1.3	Objectives of a spectral description	144
8.2	Instantaneous power spectrum	145
8.3	Mark's Physical Spectrum	146
8.3.1	Definition and properties	146
8.3.2	Duality, uncertainty principle	148
8.3.3	Relation to the <i>PSD</i> of a stationary process	150
8.3.4	Example: Structural response to a sweep sine	151
8.4	Priestley's Evolutionary Spectrum	152
8.4.1	Generalized harmonic analysis	152
8.4.2	Evolutionary spectrum	154
8.4.3	Vector process	155
8.4.4	Input-output relationship	156
8.4.5	State variable form	157
8.4.6	Remarks	158
8.5	Applications	158
8.5.1	Structural response to a sweep sine	158
8.5.2	Transient response of an oscillator	159
8.5.3	Earthquake records	159
8.6	Summary	160
8.7	References	161
8.8	Problems	162
9	Markov Process	164
9.1	Conditional probability	164
9.2	Classification of random processes	165
9.3	Smoluchowski equation	166
9.4	Process with independent increments	166
9.4.1	Random Walk	167
9.4.2	Wiener process	167
9.5	Markov process and state variables	169
9.6	Gaussian Markov process	171
9.6.1	Covariance matrix	171
9.6.2	Wide sense Markov process	173
9.6.3	Power spectral density matrix	173
9.7	Random walk and diffusion equation	175
9.7.1	Random walk of a free particle	175
9.7.2	Random walk of an elastically bound particle	176
9.8	One-dimensional Fokker-Planck equation	177

9.8.1	Derivation of the Fokker-Planck equation	179
9.8.2	Kolmogorov equation	180
9.9	Multi-dimensional Fokker-Planck equation	181
9.10	The Brownian motion of an oscillator	182
9.11	Replacement of an actual process by a Markov process . . .	184
9.11.1	One-dimensional process	184
9.11.2	Stochastically equivalent systems	185
9.11.3	Multi-dimensional process	186
9.12	References	186
9.13	Problems	187
10	Threshold Crossings, Maxima, Envelope and Peak Factor	188
10.1	Introduction	188
10.2	Threshold crossings	189
10.2.1	Up-crossings of a level b	189
10.2.2	Central frequency	190
10.3	Maxima	191
10.4	Envelope	194
10.4.1	Crandall & Mark's definition	194
10.4.2	Rice's definition	194
10.4.3	The Hilbert transform	196
10.4.4	Cramer & Leadbetter's definition	197
10.4.5	Discussion	197
10.4.6	Second order joint distribution of the envelope . . .	199
10.4.7	Threshold crossings	200
10.4.8	Clump size	202
10.5	First-crossing problem	206
10.5.1	Introduction	206
10.5.2	Independent crossings	207
10.5.3	Independent envelope crossings	208
10.5.4	Approach based on the clump size	208
10.5.5	Vanmarcke's model	208
10.5.6	Extreme point process	209
10.6	First-passage problem and Fokker-Planck equation	211
10.6.1	Multidimensional Markov process	211
10.6.2	Fokker-Planck equation of the envelope	211
10.6.3	Kolmogorov equation of the reliability	212
10.7	Peak factor	213
10.7.1	Extreme value probability	213
10.7.2	Formulae for the peak factor	214
10.8	References	216
10.9	Problems	217

11 Random fatigue	220
11.1 Introduction	220
11.2 Uniaxial loading with zero mean	221
11.3 Biaxial loading with zero mean	222
11.4 Finite element formulation	224
11.5 Fluctuating stresses	224
11.6 Recommended procedure	225
11.7 Example	226
11.8 References	227
11.9 Problems	228
12 The Discrete Fourier Transform	229
12.1 Introduction	229
12.2 Consequences of the convolution theorem	231
12.2.1 Periodic continuation	231
12.2.2 Sampling	232
12.3 Shannon's theorem, Aliasing	233
12.4 Fourier series	235
12.4.1 Orthogonal functions	235
12.4.2 Fourier series	236
12.4.3 Gibbs phenomenon	237
12.4.4 Relation to the Fourier transform	238
12.5 Graphical development of the <i>DFT</i>	239
12.6 Analytical development of the <i>DFT</i>	241
12.7 Definition and properties of the <i>DFT</i>	243
12.7.1 Definition of the <i>DFT</i> and <i>IDFT</i>	243
12.7.2 Properties of the <i>DFT</i>	243
12.8 Leakage reduction	246
12.9 Power spectrum estimation	249
12.10 Convolution and correlation via <i>FFT</i>	250
12.10.1 Periodic convolution and correlation	250
12.10.2 Approximation of the continuous convolution	252
12.10.3 Sectioning Overlap-save	254
12.10.4 Sectioning Overlap-add	254
12.11 <i>FFT</i> simulation of Gaussian processes with prescribed <i>PSD</i>	254
12.12 References	257
12.13 Problems	258
Bibliography	261
Index	269
