I. Statistical Methods to Develop Rating Models	1
Evelyn Hayden and Daniel Porath	
1. Introduction	1
2. Statistical Methods for Risk Classification	1
3. Regression Analysis	2
4. Discriminant Analysis	3
5. Logit and Probit Models	4
6. Panel Models	7
7. Hazard Models	8
8. Neural Networks	9
9. Decision Trees	10
10. Statistical Models and Basel II	11
References	12
II. Estimation of a Rating Model for Corporate Exposures	13
Evelyn Hayden	
1. Introduction	13
2. Model Selection	13
3. The Data Set	14
4. Data Processing	15
4.1. Data Cleaning	15
4.2. Calculation of Financial Ratios	16
4.3. Test of Linearity Assumption	17
5. Model Building	19
5.1. Pre-selection of Input Ratios	19
5.2. Derivation of the Final Default Prediction Model	21
5.3. Model Validation	22
6. Conclusions	24
References	24
III. Scoring Models for Retail Exposures	25
Daniel Porath	
1. Introduction	25
2. The Concept of Scoring	26
2.1. What is Scoring?	26
2.2. Classing and Recoding	27
2.3. Different Scoring Models	29
3. Scoring and the IRBA Minimum Requirements	30
3.1. Rating System Design	30
3.2. Rating Dimensions	30

3.3. Risk Drivers.....	31
3.4. Risk Quantification.....	31
3.5. Special Requirements for Scoring Models.....	32
4. Methods for Estimating Scoring Models.....	32
5. Summary.....	36
References.....	37

IV. The Shadow Rating Approach – Experience from Banking Practice 39

Ulrich Erlenmaier

1. Introduction.....	39
2. Calibration of External Ratings.....	42
2.1. Introduction.....	42
2.2. External Rating Agencies and Rating Types.....	43
2.3. Definitions of the Default Event and Default Rates.....	44
2.4. Sample for PD Estimation.....	45
2.5. PD Estimation Techniques.....	46
2.6. Adjustments.....	47
2.7. Point-in-Time Adaptation.....	48
3. Sample Construction for the SRA Model.....	50
3.3. External PDs and Default Indicator.....	54
4. Univariate Risk Factor Analysis.....	57
4.1. Introduction.....	57
4.2. Discriminatory Power.....	58
4.3. Transformation.....	59
4.4. Representativeness.....	62
4.5. Missing Values.....	63
4.6. Summary.....	65
5. Multi-factor Model and Validation.....	66
5.1. Introduction.....	66
5.2. Model Selection.....	66
5.3. Model Assumptions.....	67
5.4. Measuring Influence.....	70
5.5. Manual Adjustments and Calibration.....	72
5.6. Two-step Regression.....	73
5.7. Corporate Groups and Sovereign Support.....	73
5.8. Validation.....	74
6. Conclusions.....	75
References.....	76

V. Estimating Probabilities of Default for Low Default Portfolios 79

Katja Pluto and Dirk Tasche

1. Introduction.....	79
2. Example: No Defaults, Assumption of Independence.....	81
3. Example: Few Defaults, Assumption of Independence.....	83
4. Example: Correlated Default Events.....	86
5. Potential Extension: Calibration by Scaling Factors.....	89

6. Potential Extension: The Multi-period case	92
7. Potential Applications	97
8. Open Issues	97
9. Conclusions	98
References	99
Appendix A	100
Appendix B	102
VI. A Multi-Factor Approach for Systematic Default and Recovery Risk... 105	
Daniel Rösch and Harald Scheule	
1. Modelling Default and Recovery Risk	105
2. Model and Estimation	106
2.1. The Model for the Default Process	106
2.2. The Model for the Recovery	107
2.3. A Multi-Factor Model Extension.....	108
2.4. Model Estimation.....	110
3. Data and Results.....	111
3.1. The Data.....	111
3.2. Estimation Results	114
4. Implications for Economic and Regulatory Capital	118
5. Discussion	122
References	123
Appendix: Results of Monte-Carlo Simulations	124
VII. Modelling Loss Given Default: A “Point in Time”-Approach..... 127	
Alfred Hamerle, Michael Knapp, Nicole Wildenauer	
1. Introduction	127
2. Statistical Modelling.....	129
3. Empirical Analysis	131
3.1. The Data.....	131
3.2. Results.....	134
4. Conclusions	138
References	139
Appendix: Macroeconomic Variables.....	140
VIII. Estimating Loss Given Default – Experiences from Banking Practice..... 143	
Christian Peter	
1. Introduction	143
2. LGD Estimates in Risk Management	144
2.1. Basel II Requirements on LGD Estimates – a Short Survey.....	144
2.2. LGD in Internal Risk Management and Other Applications.....	145
3. Definition of Economic Loss and LGD.....	147
4. A Short Survey of Different LGD Estimation Methods.....	149
5. A Model for Workout LGD.....	151

6. Direct Estimation Approaches for LGD.....	153
6.1. Collecting Loss Data – the Credit Loss Database.....	154
6.2. Model Design and Estimation.....	156
7. LGD Estimation for Defaulted Exposures	170
8. Concluding Remarks.....	173
References.....	174
IX. Overview of EAD Estimation Concepts	177
Walter Gruber and Ronny Parchert	
1. EAD Estimation from a Regulatory Perspective.....	177
1.1. Definition of Terms	177
1.2. Regulatory Prescriptions Concerning the EAD Estimation	178
1.3. Delimitation to Other Loss Parameters.....	179
1.4. EAD Estimation for Derivative Products	181
2. Internal Methods of EAD Estimation.....	184
2.1. Empirical Models	184
2.2. Internal Approaches for EAD Estimation for Derivative Products.....	186
3. Conclusion	195
References.....	195
X. EAD Estimates for Facilities with Explicit Limits.....	197
Gregorio Moral	
1. Introduction.....	197
2. Definition of Realised Conversion Factors	198
3. How to Obtain a Set of Realised Conversion Factors	201
3.1. Fixed Time Horizon.....	201
3.2. Cohort Method.....	202
3.3. Variable Time Horizon	203
4. Data Sets (RDS) for Estimation Procedures.....	205
4.1. Structure and Scope of the Reference Data Set	206
4.2. Data Cleaning	207
4.3. EAD Risk Drivers.....	211
5. EAD Estimates	213
5.1. Relationship Between Observations in the RDS and the Current Portfolio.....	213
5.2. Equivalence between EAD Estimates and CF Estimates.....	213
5.3. Modelling Conversion Factors from the Reference Data Set	214
5.4. $LEQ = \text{Constant}$	217
5.5. Usage at Default Method with $CCF = \text{Constant}$ (Simplified Momentum Method).....	218
6. How to Assess the Optimality of the Estimates	219
6.1. Type of Estimates	219
6.2. A Suitable Class of Loss Functions	220
6.3. The Objective Function	221
7. Example 1	223
7.1. RDS	223

7.2. Estimation Procedures	228
8. Summary and Conclusions	235
References	236
Appendix A. Equivalence between two Minimisation Problems	237
Appendix B. Optimal Solutions of Certain Regression and Optimization Problems	238
Appendix C. Diagnostics of Regressions Models	239
Appendix D. Abbreviations.....	242

XI. Validation of Banks' Internal Rating Systems - A Supervisory

Perspective	243
Stefan Blochwitz and Stefan Hohl	
1. Basel II and Validating IRB Systems	243
1.1. Basel's New Framework (Basel II).....	243
1.2. Some Challenges.....	244
1.3. Provisions by the BCBS.....	247
2. Validation of Internal Rating Systems in Detail	250
2.1. Component-based Validation.....	250
2.2. Result-based Validation	256
2.3. Process-based Validation	259
3. Concluding Remarks	261
References	262

XII. Measures of a Rating's Discriminative Power – Applications and Limitations

263

Bernd Engelmann

1. Introduction	263
2. Measures of a Rating System's Discriminative Power.....	265
2.1. Cumulative Accuracy Profile.....	266
2.2. Receiver Operating Characteristic	268
2.3. Extensions	272
3. Statistical Properties of AUROC	275
3.1. Probabilistic Interpretation of AUROC	275
3.2. Computing Confidence Intervals for AUROC.....	277
3.3. Testing for Discriminative Power.....	279
3.4. Testing for the Difference of two AUROCs	280
4. Correct Interpretation of AUROC	283
References	285
Appendix A. Proof of (2)	285
Appendix B. Proof of (7).....	286

XIII. Statistical Approaches to PD Validation

289

Stefan Blochwitz, Marcus R. W. Martin, and Carsten S. Wehn

1. Introduction	289
2. PDs, Default Rates, and Rating Philosophy	289

3. Tools for Validating PDs.....	291
3.1. Statistical Tests for a Single Time Period.....	292
3.2. Statistical Multi-period Tests.....	298
3.3. Discussion and Conclusion.....	303
4. Practical Limitations to PD Validation	303
References.....	305

XIV. PD-Validation – Experience from Banking Practice 307

Robert Rauhmeier

1. Introduction.....	307
2. Rating Systems in Banking Practice	308
2.1. Definition of Rating Systems.....	308
2.2. Modular Design of Rating Systems	308
2.3. Scope of Rating Systems	310
2.4. Rating Scales and Master Scales	310
2.5. Parties Concerned by the Quality of Rating Systems	312
3. Statistical Framework.....	313
4. Central Statistical Hypothesis Tests Regarding Calibration.....	316
4.1. Binomial Test	317
4.2. Spiegelhalter Test (SPGH).....	319
4.3. Hosmer-Lemeshow- χ^2 Test (HSLs).....	320
4.4. A Test for Comparing Two Rating Systems: The Redelmeier Test.....	321
5. The Use of Monte-Carlo Simulation Technique	323
5.1. Monte-Carlo-Simulation and Test Statistic: Correction of Finite Sample Size and Integration of Asset Correlation.....	323
5.2. Assessing the Test Power by Means of Monte-Carlo-Simulation	329
6. Creating Backtesting Data Sets – The Concept of the Rolling 12-Month-Windows	333
7. Empirical Results	336
7.1. Data Description.....	336
7.2. The First Glance: Forecast vs. Realised Default Rates	337
7.3. Results of the Hypothesis Tests for all Slices.....	337
7.4. Detailed Analysis of Slice ‘Jan2005’	339
8. Conclusion	341
References.....	342
Appendix A	344
Appendix B	345

XV. Development of Stress Tests for Credit Portfolios..... 347

Volker Matthias Gundlach

1. Introduction.....	347
2. The Purpose of Stress Testing.....	348
3. Regulatory Requirements.....	349
4. Risk Parameters for Stress Testing.....	351
5. Evaluating Stress Tests.....	353

6. Classifying Stress Tests.....	354
7. Conducting Stress Tests	358
7.1. Uniform Stress Tests.....	358
7.2. Sensitivity Analysis for Risk Factors.....	360
7.3. Scenario Analysis	360
8. Examples	363
9. Conclusion.....	366
References	368
