

Contents

<i>Preface</i>	<i>page vii</i>
Part I Group structure	1
1 Global properties of groups and Lie groups	
2 Local properties of Lie groups	13
3 Lie algebras	22
4 Hermitian irreducible representations of compact simple Lie algebras	36
5 Continuous unitary irreducible representations (CUIRs) of compact Lie groups	49
6 Rigid internal groups	63
Part II Gauge theory	75
7 The gauge principle	77
8 Spontaneous symmetry breaking	88
9 Gauge theory of the non-gravitational interactions	101
10 Grand unification	110
11 Orbit structure	128
12 The scalar potential	140
<i>References</i>	154
<i>Suggestions for further reading</i>	159
<i>Glossary</i>	162
<i>Index</i>	169
