Preface		*page* ix
Introduction		x
Notation		xvi
Prelude	A reminder	1
0.1	Commutators	1
0.2	Nilpotent groups	2
0.3	Stability group theory	4
0.4	Unipotent groups	5
0.5	Frattini subgroup	5
0.6	Group algebras	6
0.7	Topology	7
0.8	Lie algebras	9
0.9	p-adic numbers	10
	Part I: Pro-p groups	13
1	**Profinite groups and pro-p groups**	15
1.1	Profinite groups	15
1.2	Pro-p groups	22
1.3	Procyclic groups	29
	Exercises	31
2	**Powerful p-groups**	37
	Exercises	45
3	**Pro-p groups of finite rank**	48
3.1	Powerful pro-p groups	48
3.2	Pro-p groups of finite rank	51
3.3	Characterisations of finite rank	52
	Exercises	58

4	**Uniformly powerful groups**	61
4.1	Uniform groups	61
4.2	Multiplicative structure	64
4.3	Additive structure	65
4.4	On the structure of powerful pro-p groups	70
4.5	The Lie algebra	75
4.6	Generators and relations	78
	Exercises	83
5	**Automorphism groups**	87
5.1	The group $\mathrm{GL}_d(\mathbb{Z}_p)$	87
5.2	The automorphism group of a profinite group	89
5.3	Automorphism groups of pro-p groups	91
5.4	Finite extensions	92
	Exercises	96
Interlude A	'Fascicule de résultats': pro-p groups of finite rank	97
	Part II: Analytic groups	99
6	**Normed algebras**	101
6.1	Normed rings	101
6.2	Sequences and series	104
6.3	Strictly analytic functions	108
6.4	Commuting indeterminates	117
6.5	The Campbell–Hausdorff formula	122
6.6	Power series over pro-p rings	129
	Exercises	134
7	**The group algebra**	138
7.1	The norm	138
7.2	The Lie algebra	148
7.3	Linear representations	153
7.4	The completed group algebra	155
	Exercises	166
Interlude B	Linearity criteria	171
8	**p-adic analytic groups**	178
8.1	p-adic analytic manifolds	178
8.2	p-adic analytic groups	185
8.3	Uniform pro-p groups	189
8.4	Standard groups	193
	Exercises	203

Interlude C Finitely generated groups, p-adic analytic groups and Poincaré series 206
9 Lie theory 213
9.1 Powers 213
9.2 Analytic structures 217
9.3 Subgroups, quotients, extensions 220
9.4 Powerful Lie algebras 221
9.5 Analytic groups and their Lie algebras 228
Exercises 235

Part III: Further topics 241
10 Pro-p groups of finite coclass 243
10.1 Coclass and rank 245
10.2 The case $p = 2$ 248
10.3 The dimension 250
10.4 Solubility 256
10.5 Two theorems about Lie algebras 262
Exercises 267

11 Dimension subgroup methods 270
11.1 Modular dimension subgroups 270
11.2 Commutator identities 273
11.3 The main results 282
11.4 Index growth 285
Exercises 289

12 Some graded algebras 291
12.1 Restricted Lie algebras 292
12.2 Theorems of Jennings and Lazard 298
12.3 Poincaré series: 'l'alternative des gocha' 306
Exercises 310

Interlude D The Golod–Shafarevich inequality 311
Interlude E Groups of sub-exponential growth 319
13 Analytic groups over pro-p rings 322
13.1 Analytic manifolds and analytic groups 322
13.2 Standard groups 330
13.3 The Lie algebra 339
13.4 The graded Lie algebra 343
13.5 R-perfect groups 344
13.6 On the concept of an analytic function 347
Exercises 350

Appendix A **The Hall–Petrescu formula** 355
Appendix B **Topological groups** 358

Bibliography 362
