

Table of Contents

<i>Introduction</i>	1
§ 1. Classifications. Some Notation	1
 Chapter 1. <i>Systems with Queues and Service of Type One</i>	 4
§ 2. Cases in Which the Systems $\langle G \rangle$ Can be Described by Means of Recursion Equations. Equivalence to the System $\langle G, G, G, I \rangle$	4
§ 3. The Basic Equation. Properties of the Solution as a Process. Ergodic Theorems	7
§ 4. Interrupted Governing Sequences	19
§ 5. On Systems Governed by Sequences of Independent Random Variables	20
§ 6. The Virtual Waiting Time. A Continuous Analogue of the System Equation. Properties of the Solution	22
§ 7. Further Properties of the Process $w(t)$. Beneš' Equation	29
§ 8. The Stationary Solution of Beneš' Equation. Approximation Formulae for Heavy and Light Traffic	33
§ 9. The Processes $X(t)$ and $Y(t)$ with Stationary Increments Corresponding to Governing Sequences with Independent Terms. The Connection between the Distributions of $w^c(t)$ and w^k	44
§ 10. Estimates of the Rate of Convergence of the Distributions of w_n and $w(t)$ to Stationarity. Connection with the Queue Length	48
§ 11. Theorems on the Stability of the Stationary Waiting Time under a Change of the Governing Sequences.	52
 Chapter 2. <i>Some Boundary Problems for Processes Continuous from below with Independent Increments. Their Connection with the Distribution of $w(t)$.</i>	 64
§ 12. Boundary Problems for Processes Continuous from below with Independent Increments	64

§ 13. Properties of the Distribution of $w(t)$. The Busy Period	75
§ 14. Discrete Time	80
Chapter 3. <i>Boundary Problems for Sequences with Independent Increments and Factorization Identities</i>	85
§ 15. Preliminary Remarks.	85
§ 16. The First Factorization Identity and Its Consequences	88
§ 17. The Second Factorization Identity and Its Consequences	95
Chapter 4. <i>Properties of the Supremum of Sums of Independent Random Variables and Related Problems of Queueing Theory</i>	103
§ 18. Uniqueness Theorems	103
§ 19. Methods of Finding the Distribution of \bar{Y}	105
§ 20. Explicit Formulae for the Distribution of \bar{Y} under the Conditions of Queueing Theory	110
§ 21. Stability Theorems. The Rate of Convergence	113
§ 22. Asymptotic Properties of the Distributions of \bar{Y} and θ	123
§ 23. Inequalities for the Distributions of \bar{Y}_n and \bar{Y} . The Rate of Approach of the Distributions of w_n and w^1	139
§ 24. Comparison Theorems	141
§ 25. Conditions for Heavy Traffic. Transitional Phenomena	147
§ 26. The Relation between the Waiting Time and Queue Length Distributions	155
Chapter 5. <i>Multi-Channel Queueing Systems</i>	161
§ 27. Classes of Systems Which Can Be Described by Recursion Equations. Existence Theorems for a Stationary Solution in the Systems $\langle G, G, G/m, 1 \rangle$. The Relation between the Waiting Time and the Queue Length	161
§ 28. The Systems $\langle G_I, G_I, G_I/m, 1 \rangle$. Stability Theorems. Connection between the Waiting Time and Queue Length. Estimates of Rates of Convergence	169
§ 29. The Systems $\langle G_I, 1, E/m, 1 \rangle$ and $\langle E, G_I, G_I/m, 1 \rangle$	178
Chapter 6. <i>The Systems $\langle G, G, G/\infty, 1 \rangle$ with an Infinite Number of Service Channels</i>	185
§ 30. Theorems on Convergence to Stationary Processes.	185
§ 31. Stability Theorems	188
§ 32. The Systems $\langle G_I, G_I, G_I/\infty, 1 \rangle$	193
§ 33. The Systems $\langle E, 1, G_I/\infty, 1 \rangle$	195
§ 34. The Systems $\langle G_I, 1, E/\infty, 1 \rangle$	199

Chapter 7. <i>Systems with Refusals</i>	202
§ 35. The Systems $\langle G, G, G/m, 1 \rangle_R$. General Theorems	202
§ 36. Stability Theorems	209
§ 37. The Systems $\langle G_I, 1, G_I/m, 1 \rangle_R$	211
§ 38. The Systems $\langle G_I, G_I, E/m, G_I \rangle_R$	217
§ 39. The Systems $\langle G \rangle_R$	219
§ 40. Asymptotic Analysis of Multi-Channel Systems	225
Chapter 8. <i>Systems with Autonomous Service</i>	235
§ 41. General Properties	235
§ 42. Methods of Calculating the Stationary Distributions	240
<i>Appendices</i>	243
Appendix 1. Some Theorems from Renewal Theory	243
Appendix 2. Factorization in the Ring \mathfrak{B} and Some Theorems Associated with It	249
Appendix 3. The Wiener-Lévy Theorems and the Asymptotic Behavior of the Coefficients of Absolutely Conver- gent Series	258
Appendix 4. Estimates for the Distributions of Sums of Inde- pendent Random Variables	261
<i>List of Basic Notation.</i>	267
<i>Bibliographical Notes</i>	269
<i>Bibliography</i>	273
<i>Author Index</i>	276
<i>Subject Index</i>	277
