Contents

1 Introduction 1

1.1 Background 1
1.2 Communication Systems 2
1.3 Statistical Communication Theory 3
1.4 Additional Reading 3

2 Probability and Random Variables 4

2.1 Introductory Remarks 4
2.2 Elements of Set Theory 4
2.3 Algebra of Sets 6
2.4 Probability and Relative Frequency 9
2.5 Some Elementary Properties of Probability 13
2.6 Independence 15
2.7 Permutations and Combinations 16
2.8 An Axiomatic Approach to Probability 18
2.9 Random Variables, Discrete and Continuous 19
2.10 Distribution Functions and Densities 21
2.11 The Transformation of Random Variables 27
2.12 Expectation 32
2.13 Moments 33
2.14 The Tchebycheff Inequality 36
2.15 Generating Functions 37
2.16 The Binomial Distribution 38
2.17 The Poisson Distribution 42
2.18 The Normal or Gaussian Distribution 44
2.19 Limit Theorems 49
2.20 Bivariate Distributions 52

2.21 The Bivariate Normal Distribution 59
2.22 The Multivariate Normal Distribution 61
2.23 Linear Transformations on Normal Random Variables 64
2.24 Series Expansions of Density Functions, Hermite Polynomials 66
2.25 The Gram-Charlier and Edgeworth Series 69
Problems 71
References 77
Additional Reading 77

3 Random Processes and Spectral Analysis 78

3.1 Definition 78
3.2 Stationarity 84
3.3 Correlation Functions 86
3.4 Time Averages and Ergodicity 90
3.5 Convergence of Random Variables 91
3.6 Fourier Transforms 93
3.7 Integrals of Random Processes 96
3.8 Power Spectra 96
3.9 An Example of the Calculation of Autocorrelation Functions and Power Spectral Densities 104
3.10 The Gaussian Process 111
3.11 White Noise 112
3.12 Markov Processes 114
3.13 Regularity and Ergodicity of Finite Markov Chains 117
3.14 Shot Noise 119
3.15 Random Events in Time 121
3.16 The Mean and Autocorrelation Function of Shot Noise 124
3.17 The Amplitude Distribution of Shot Noise 131
Problems 135
References 138

4 Linear Systems with Random Inputs 139

4.1 Introduction 139
4.2 Linear Systems 139
4.3 Description of Linear Systems 141
4.4 Random Inputs 145
4.5 Complete Statistical Description 148
4.6 Representation of Random Processes 148
4.7 Narrow-Band Systems 154
4.8 Narrow-Band Systems with Added Sinusoids 160
4.9 Maximum-Power-Transfer Theorems 167
4.10 Noise in Linear Amplifiers 169
4.11 Noise Figure 173
4.12 Noise in Cascaded Stages 177
Problems 181
References 184

5 Optimum Linear Systems 186

5.1 Optimum Systems 186

Part 1 The Matched Filter

5.2 The Matched Filter 187
5.3 The Matched Filter for White Noise 188
5.4 The Matched Filter for Arbitrary Noise 194
5.5 The Unrealizable Matched Filter 199
5.6 Spectral Factorization 204
5.7 Prewhitening or Spectral Shaping 209
5.8 Solution for Matched Filter by Prewhitening Techniques 212
5.9 Direct Solution of the Integral Equation for the Matched Filter 217

Part 2 Optimum Linear Filtering and Prediction (Wiener Filters)

5.10 Formulation of the Least Mean-Squared-Error Filtering and Prediction Problem 218
5.11 The Unrealizable Least Mean-Squared-Error Filter 222
5.12 Solution of the Integral Equation 224
5.13 The Mean-Squared Error 228
5.14 The Pure Prediction Problem 234
5.15 Solution of the Least Mean-Squared-Error Filtering and Prediction Problem by the Method of Bode and Shannon 235

Part 3 The Parameter Optimization of Linear Systems

5.16 Introduction and Formulation 242
5.17 Evaluation of the Mean-Squared-Error Integral 248
5.18 Conclusion 250
Problems 250
References 254
Additional Reading 254

6 Nonlinear Systems with Random Inputs 257

6.1 Introduction 257
6.2 Classification of Nonlinear Systems 258

Part 1 Zero-Memory Nonlinear Systems (Class κ_1—Type II Nonlinearities)

6.3 Direct Computation of Moments (The Density Function Method) 260
6.4 The Square-Law Device 261
6.5 The Square-Law Device—Signal Plus Noise Input 267
6.6 The Square-Law Device—AM Signal Plus Noise Input 268
6.7 The Square-Law Receiver 273
6.8 Receiver Evaluation—The Mean-Squared Error 276
6.9 Receiver Evaluation—Improvement Factor 278
6.10 The Hard Limiter 280

6.11 The Characteristic Function Method 284
6.12 νth-Law Devices 286
6.13 The Smooth Limiter; Price's Theorem 298
6.14 General Techniques—Series Expansions of Input Densities 305
6.15 General Techniques—Series Expansions of Nonlinearities 314

Part 2 Zero-Memory Nonlinear Devices Followed by Linear Filters (Class κ_1—Type III Nonlinearities)

6.16 Squaring and Filtering a Gaussian Input 323
6.17 Narrow-Band Inputs to νth-Law Systems 340
6.18 νth-Law Nonlinear Amplifiers and Detectors 353

Part 3 General (Nonlinear) Least Mean-Square-Error Filtering and Prediction

6.19 Formulation and General Solution 356
6.20 The Linear Case 359
6.21 The ZNL Least Mean-Squared-Error Filter 363
Problems 366
References 369
Additional Reading 369

7 Modulation Theory and Systems 376

7.1 Introduction 376

Part 1 Elements of Continuous Signal Theory

7.2 Transforms and Convolutions 379
7.3 Time and Frequency Domain Relations 382
7.4 Duration (Response Time) and Bandwidth—Uncertainty Relationships 386
7.5 The Sampling Theorem 400
7.6 Bandpass Signals and Systems 405
7.7 The Sampling Theorem for Bandpass Signals 409
7.8 Power Spectrum and Time Autocorrelation Functions 412
7.9 Periodic Signals and Discrete Spectra 416
7.10 Pulsed Signals—Signals With Finite Energy 418
7.11 Random Signals 420

Part 2 Continuous Modulation

7.12 Linear or Amplitude Modulation (AM) 421
7.13 Vector Linear Modulation 430
7.14 Bandwidth and Power Relationships for Amplitude Modulation 438
7.15 AM Receivers 441

7.16 Angle Modulation 447
7.17 The Effect of Noise on FM Signals 453

Part 3 Pulse Modulation

7.18 Pulse Amplitude Modulation (PAM) 459
7.19 Quantizing and Quantizing Error 463
7.20 Signal Encoding 465
7.21 Pulse Code Modulation (PCM) 468
Problems 472
References 474
Additional Reading 475

8 Information Theory 477

8.1 Introduction and Historical Background 477
8.2 Self-information and Entropy 479
8.3 Units, Number Systems, and Binary Digits 481
8.4 Properties of the Entropy of a Discrete Random Variable 483
8.5 Mutual Information 488
8.6 Joint and Conditional Entropy 498
8.7 Sources of Information—The Zero-Memory Source 501
8.8 The Markov Information Source 503
8.9 The Entropy of a Markov Source 512
8.10 Noiseless Coding and the Noiseless Discrete Channel 516
8.11 The Noiseless Coding Theorem 521
8.12 The Construction of Codes 525
8.13 Channel Capacity 532
8.14 Error Probability, Decision Rules, and the Fano Bound 540
8.15 The Noisy Coding Theorem 546
8.16 Error-Correcting Codes 550
8.17 Continuous Channels 556
8.18 The Maximization of the Entropy of Continuous Distributions 561
8.19 Gaussian Signals and Channels 563
8.20 Bandlimited Channels 568
8.21 Concluding Remarks 569
Problems 570
References 573
Additional Reading 574

Appendix A The Riemann-Stieltjes Integral 577

A.1 The Riemann Integral 577
A.2 Functions of Bounded Variation 578
A.3 The Riemann-Stieltjes Integral 579
References 581

Appendix B The Dirac Delta Function 582

B.1 Step Functions 582
B.2 The Dirac Delta Function 584
References 588

Appendix C The Transformation of Coordinates 589

C.1 Introduction 589
C.2 Transformation in Two Dimensions 590
C.3 Extension to the n-Dimensional Case 592
References 593

Appendix D Fourier Series and the Fourier and Laplace Transforms 594

D.1 Introduction 594
D.2 Periodic Functions 595
D.3 Fourier Series 595
D.4 Some Properties of the Fourier Series 598
D.5 The Complex Form for the Fourier Series 602
D.6 The Gibbs Phenomenon 603
D.7 The Fourier Integral Theorem 606
D.8 Elementary Properties of Fourier Transforms 609
D.9 The Laplace Transform 610
D.10 Signal Energy and the Power Spectrum 612
References 613

Appendix E Some Inequalities Including Schwarz's Inequality 614

E.1 Introduction 614
E.2 Holder's Inequality 615
E.3 Minkowski's Inequality 618
E.4 Schwarz's Inequality 619
References 620

Appendix F The Calculus of Variations 621

F.1 Maxima and Minima of a Function 621
F.2 Maxima and Minima of Functions of Two or More Variables 625
F.3 Lagrange's Method of Undetermined Multipliers 627
F.4 The Fundamental Problem of the Calculus of Variations 629
F.5 Isoperimetric Problems 632
F.6 Isoperimetric Problems Involving More General Functionals 634
References 635

Appendix G A Tabulation of Integrals Useful in the Calculation of Mean-Squared Error 636

Appendix H Hilbert Transforms, Analytic Signals, and Correlation Functions 639

H.1 The Hilbert Transform 639
H.2 Causal Signals and Physically Realizable Systems 645
H.3 Single-Sideband Systems 648
H.4 Analytic Signals 650
H.5 Instantaneous Envelope, Phase, and Frequency 652
H.6 Correlation Functions and Hilbert Transforms 654
Reference 657

Appendix I Useful Tables 658

Table I.1 The Normal Distribution 658
Table I.2 Fourier-Transform Properties and Pairs 659
Table I.3 Laplace-Transform Properties and Pairs 660
Table I.4 Logarithms to the Bases 2, *e*, and 10 661
Table I.5 Entropy of a Binary Source 662

Index 663
