

C ONTENTS

Preface, v

1	THE ROLE OF TRAFFIC ENGINEERING AND PLANNING: SOME PERTINENT ASPECTS	1 v
1.1	INTRODUCTION	1
1.2	PERTINENT QUESTIONS FACING THE ENGINEER AND PLANNER	1
1.3	TRAFFIC ENGINEERING: A CURRENT VIEW VERSUS OUR VIEW	4
2	TOWARD A FORMALIZED BASIS FOR TRAFFIC ENGINEERING DESIGN AND PLANNING	6 v
2.1	INTRODUCTION	6
2.2	CHARACTERIZATION AND DESCRIPTION OF DESIGN PROCESS	7
2.2.1	Selection of goals and objectives; problem definition	7
2.2.2	Determination of system elements or variables	10
2.2.3	Formulation of system model	10
2.2.4	Search for and specification of alternative designs	12
2.2.5	Evaluation of alternative system designs	13
2.2.6	Implementation, operation, and problem redefinition	14
2.3	MULTIPLE AND CONFLICTING DESIGN OBJECTIVES	15
2.4	ELEMENTS OF TRAFFIC FLOW IN THE DESIGN PROCESS	15
2.4.1	Composition of traffic	16
2.4.2	Volume of traffic movement	17
2.4.3	Origin and destination of traffic movement	18
2.4.4	Quality of traffic movement	18
2.4.5	Cost of traffic movement	19
2.5	ECONOMIC ANALYSIS AND DECISION THEORY IN ENGINEERING DESIGN	20
2.6	STATISTICS IN ENGINEERING DESIGN	22
2.7	CONCLUDING REMARKS	23
	References	23

3	AN INTRODUCTION TO PROBABILITY AND STATISTICS FOR TRAFFIC ENGINEERING DESIGN	24
3.1	INTRODUCTION	24
3.2	RANDOM VARIABLES AND CERTAIN STATISTICAL MEASURES	24
3.2.1	The arithmetic mean	25
3.2.2	Measures of dispersion	27
3.3	SOME BASIC CONCEPTS OF PROBABILITY	29
3.4	SOME PROBABILITY LAWS FOR DISCRETE RANDOM VARIABLES	35
3.4.1	The binomial distribution	35
3.4.2	Poisson distribution	39
3.5	SOME PROBABILITY LAWS FOR CONTINUOUS RANDOM VARIABLES	45
3.5.1	The normal distribution	46
3.5.2	Exponential distribution function	51
3.6	HYPOTHESIS TESTING	53
3.6.1	The chi-square goodness-of-fit test	57
3.6.2	The Student's t test	61
3.7	CLOSING REMARKS	68
	Appendix for Chapter 3	69
	References	79
4	INTRODUCTORY SAMPLING THEORY AND LINEAR REGRESSION ANALYSIS	80
4.1	GENERAL CONSIDERATIONS OF THE ACCURACY, COST, AND TIME REQUIREMENTS OF DATA COLLECTION	80
4.2	SAMPLING-THEORY PRINCIPLES FOR DETERMINING SAMPLE SIZE AND ACCURACY RELATIONSHIPS	81
4.2.1	Introduction	81
4.2.2	Sampling techniques	82
4.2.3	Central limit theorem	83
4.2.4	Estimates of the population mean and standard deviation	84
4.2.5	Estimates of the error of a sample mean and determination of sample size	86
4.2.6	An example problem concerning sample size and accuracy when sampling randomly from an infinitely large population	91
4.2.7	An example problem concerning the estimation of a finite population size and its accuracy	92
4.3	LINEAR REGRESSION ANALYSIS FOR ONE INDEPENDENT VARIABLE	93
4.3.1	Estimating a linear regression function	94
4.3.2	An example of linear regression estimation	96
4.3.3	Statistical measures of error and hypothesis testing	98

4.4 MULTIPLE LINEAR REGRESSION ANALYSIS	104
Appendix for Chapter 4	108
References	108
5 GENERAL TRAVEL FORECASTING PRINCIPLES AND TECHNIQUES	110
5.1 INTRODUCTION	110
5.2 DEFINITIONS	110
5.3 VOLUME CHARACTERISTICS	111
5.4 GENERALIZED DEMAND, PRICE, AND CAPACITY RELATIONSHIPS APPLIED TO TRAVEL FORECASTING	117
5.4.1 Price-volume (or so-called "supply") relationships	118
5.4.2 Demand relationships	122
5.4.3 Equilibrium volume as related to changes in system capacity	124
5.4.4 Use of price-volume and demand relationships in traffic prediction	126
5.5 PRACTICAL PROBLEMS OF FORECASTING TRAVEL	132
5.6 SUMMARY	149
References	150
6 PREDICTING TRAVEL FLOW AND DETERMINING DESIGN HOURLY VOLUME FOR VARYING DEMAND CONDITIONS	151
6.1 INTRODUCTION TO VARYING DEMAND CONDITIONS	151
6.1.1 Forecasting for short-run demand variations	151
6.1.2 An example forecasting problem dealing with short-run demand variations and with interdependent cost, price-volume, and demand functions	152
6.1.3 Forecasting for long-term demand variations	162
6.2 DETERMINATION OF THE DESIGN HOURLY VOLUME	164
6.2.1 The rationale of the thirtieth highest hour or critical hour concept for determining design hourly volume	165
6.2.2 A critique of thirtieth highest hour and critical hour concepts	170
6.2.3 Toward the development of a revised critical hour concept for design	174
Appendix for Chapter 6	176
References	179

7	A FRAMEWORK FOR EVALUATING ALTERNATIVE TRAFFIC ENGINEERING DESIGNS	180
7.1	INTRODUCTION	180
7.2	PURPOSE OF ECONOMIC ANALYSIS AND MAJOR CONSIDERATIONS	181
7.2.1	Point of view, or "worthwhile" to whom?	181
7.2.2	Worthwhile in what terms?	183
7.2.3	Definition of costs and benefits for public transportation projects	185
7.3	DETERMINATION AND MEASUREMENT OF PERCEIVED USER PRICE AND BENEFIT	196
7.3.1	Makeup of perceived user price-volume relationships	196
7.3.2	Measurement of perceived user travel benefit allowable in economic analyses when consumer surplus is excluded	199
7.3.3	Summary of perceived user travel benefit specifications for varying project conditions	201
7.3.4	Procedures for measurement of perceived user travel benefit and net perceived benefit for diverted, induced, and growth traffic, and their critique	202
7.4	SUMMARY AND CONCLUDING REMARKS	210
	References	211
8	THE EVALUATION OF ALTERNATIVE HIGHWAY AND TRAFFIC ENGINEERING DESIGNS: METHODS OF ANALYSIS	213
8.1	INTRODUCTION	213
8.2	INTEREST, OR THE TIME VALUE OF MONEY; CAPITAL RECOVERY; AND OTHER RELATED PROBLEMS	213
8.2.1	Appropriate interest rates for public investments	217
8.3	PROBLEMS INVOLVING RISK AND UNCERTAINTY	222
8.4	METHODS OF ECONOMIC ANALYSIS	226
8.4.1	Annual cost method	226
8.4.2	Benefit-cost-ratio method	228
8.4.3	Rate-of-return method	230
8.4.4	Net present value method	232
8.5	SALVAGE VALUE, TERMINAL DATE AND PLANNING HORIZON PROBLEMS	233
8.6	CRITIQUE OF ECONOMIC ANALYSIS METHODS	234
8.7	EXAMPLE ANALYSIS AND CONCLUDING REMARKS	241
	References	243

9	APPLICATION OF ECONOMIC ANALYSIS METHODS: A PRACTICAL EXAMPLE	245
9.1	INTRODUCTION	245
9.2	STATEMENT OF BASIC ASSUMPTIONS AND INPUT DATA	245
9.2.1	Volume data and user price-volume functions	245
9.2.2	Facility costs	251
9.2.3	User tax payments	252
9.2.4	Summary of costs and benefits to be included in analyses	255
9.3	ANALYSES TO BE CONDUCTED	258
9.3.1	Net present value (or net present worth) calculations	258
9.3.2	Discounted rate-of-return calculations	265
9.3.3	Annual cost calculations	267
9.3.4	Benefit-cost-ratio calculations	269
9.4	IMPLICATIONS OF PRECEDING ANALYSES	271
9.5	CHANGES TO PREVIOUS ANALYSES IF CONSUMER SURPLUS IS INCLUDED	272
9.6	ANALYSES FOR DESIGN CHANGES THAT DO NOT AFFECT TRAVEL VOLUME OR BENEFITS	273
	Appendix for Chapter 9	275
10	AN INTRODUCTION TO HIGHWAY AND CONGESTION COST AND PRICING PRINCIPLES	284
10.1	INTRODUCTION	284
10.2	CONGESTION COST AND PRICING RELATIONSHIPS FOR FIXED- CAPACITY SYSTEMS OR FACILITIES	284
10.2.1	Congestion and other travel costs for nonbottleneck fixed-capacity facilities	285
10.2.2	Short-run pricing policies for nonbottleneck fixed-capacity systems, and their implications	295
10.2.3	Short-run pricing policies for the "bottleneck" or backward-bending case	300
10.2.4	Conclusions for facilities whose capacity is fixed over the long run	303
10.3	GENERAL COST, PRICING, AND INVESTMENT RELATIONSHIPS	306
10.3.1	Cost relationships for facilities of various capacity levels	306
10.3.2	Interaction among price, cost, and demand for different facility sizes and pricing policies	309
10.3.3	Cost, demand, and price relationships and policies under less than idealized conditions; peak-load pricing	312

10.4 PROBLEMS AND PRACTICALITIES OF UTILIZING DIFFERENTIAL PEAK-LOAD PRICING VERSUS UNIFORM TAX PRICING	315
10.5 SUMMARY AND CONCLUSIONS	320
References	321
11 THEORETICAL TECHNIQUES FOR DESCRIBING TRAFFIC FLOW	322
11.1 INTRODUCTION	322
11.2 DEFINITIONS AND BASIC RELATIONSHIPS	322
11.3 EMPIRICAL STUDIES OF VOLUME, DENSITY, AND SPEED RELATIONSHIPS	329
11.4 REVIEW OF FLOW-DENSITY-SPEED STUDIES	337
11.5 HYDRODYNAMIC ANALOGIES	338
11.6 APPLICATION OF HYDRODYNAMIC ANALOGY	344
11.7 CAR-FOLLOWING THEORY	345
11.8 PROBABILISTIC DESCRIPTION OF TRAFFIC FLOW: DISTRIBUTION OF VEHICLES ON A ROAD	352
11.9 AN INTRODUCTION TO QUEUING THEORY AS APPLIED TO TRAFFIC FLOW PROBLEMS FOR STEADY-STATE CONDITIONS	362
11.9.1 Single-station queuing with Poisson arrivals, exponential service times, and "first come, first served" service	364
11.9.2 Multiple-station queuing with Poisson arrivals, exponential service times, and leading vehicle moving to first vacant service station	367
11.9.3 Single-station queuing models for other service-time distributions	370
References	372
12 HIGHWAY CAPACITY AND PERFORMANCE CHARACTERISTICS	374
12.1 INTRODUCTION	374
12.2 HIGHWAY CAPACITY	375
12.3 EFFECTS OF PHYSICAL FEATURES ON CAPACITY AND PERFORMANCE	378
12.4 TOTAL HIGHWAY PERFORMANCE	382
12.4.1 Performance functions for four-, six-, and eight-lane freeways	385
12.4.2 Performance functions for freeways with varying grades	389
12.5 USE OF PERFORMANCE CHARACTERISTICS IN DESIGN	389
12.6 OPERATING HIGHWAYS	391
12.7 CLOSING REMARKS	395
References	395

13	CAPACITY-PERFORMANCE RELATIONSHIPS FOR NONSIGNALIZED INTERSECTIONS	396
13.1	INTRODUCTION	396
13.2	UNCONTROLLED INTERSECTIONS	397
13.3	PRIORITY (STOP OR YIELD SIGN) INTERSECTIONS	402
13.3.1	Delay models for priority intersections	403
13.3.2	Determination of critical lag (or acceptable gap) for priority-type intersections	408
13.4	SPACE-SHARING INTERSECTIONS (OR ROTARIES AND WEAVING SECTIONS)	412
13.4.1	Definition of total weaving volume	412
13.4.2	Some theoretical models for determining weaving capacity	415
13.4.3	An empirical weaving-capacity model	419
13.4.4	Determination of delay within weaving sections	422
13.5	CLOSING REMARKS ON PRIORITY AND SPACE-SHARING INTERSECTIONS	424
	References	425
14	CAPACITY-PERFORMANCE RELATIONSHIPS FOR TIME-SHARING OR SIGNALIZED INTERSECTIONS	426
14.1	INTRODUCTION	426
14.2	DRIVER AND VEHICLE PERFORMANCE AT SIGNALIZED INTERSECTIONS	427
14.3	TYPES OF TRAFFIC SIGNALS AND CONTROL SYSTEMS	430
14.4	METHODS OF DETERMINING PERFORMANCE AT INTERSECTIONS WITH PRETIMED SIGNALS	434
14.4.1	C-E-I-R multiple regression capacity technique	435
14.4.2	Other approaches to determining intersection capacity and performance	439
14.4.3	General approach to determination of pretimed signalized-intersection performance	445
14.4.4	Example analysis of signalized-intersection performance	459
14.5	COMPARISON OF PRETIMED-SIGNAL PERFORMANCE WITH THAT OF ALTERNATIVE CONTROLS	472
14.6	PROGRESSIVE SIGNAL-CONTROL SYSTEMS	482
14.6.1	Analytical methods for determining progressive timing patterns	482
14.6.2	Model and program for maximizing bandwidths	484
14.6.3	The performance of progressive signal systems	489
	Appendix for Chapter 14	494
	References	494

15 THE USE OF SIMULATION IN TRAFFIC ENGINEERING DESIGN	496
15.1 INTRODUCTION	496
15.2 THE GENERAL SIMULATION PROCESS	497
15.2.1 Problem definition and designation of figures of merit	498
15.2.2 Determination of elements of the design	499
15.2.3 Formulation of the model	499
15.2.4 Determination of measure of effectiveness (or F.O.M.) value	500
15.2.5 Representing and scanning the simulation model	508
15.2.6 Comparison of representation and scanning techniques	511
15.2.7 Other applications of simulation, and some limitations	512
15.3 SIMULATION OF FREEWAY MERGING: AN EXAMPLE PROGRAM	513
15.3.1 Statement of problem, measures of effectiveness, and assumptions	513
15.3.2 Determination of freeway merging-section elements	515
15.3.3 Formulation of the model	515
15.3.4 Comments on F.O.M. results, testing, and data requirements for simulation example	523
15.3.5 Closing remarks on the simulation example	525
15.4 SUBSEQUENT STUDIES AND RESEARCH ON SIMULATION	525
15.5 CLOSING REMARKS	536
References	536
Index	539
